OCTOBER 2026

Chapter 1

THE PROBLEM AND ITS BACKGROUND

Introduction

Education plays a vital role in individual development and national progress. In the Philippines, many students aspire to pursue higher education; however, financial constraints prevent a significant number of them from continuing their studies. Because of this, scholarships offered by government agencies, private institutions, and other organizations have become important sources of educational assistance.

Despite the availability of scholarship programs, access to scholarship information remains a challenge. Scholarship details such as qualifications, required documents, benefits, and deadlines are often scattered across institutional websites, social media pages, school announcements, and other sources. As a result, students spend considerable time locating opportunities, comparing eligibility criteria, and determining whether they qualify. This fragmented process may cause confusion, delays, and missed opportunities even among qualified students.

In response to this problem, this study proposes the development of a web- and mobile-based scholarship finder and eligibility platform for Filipino students with a decision support system. The platform is designed to centralize scholarship information, support eligibility checking, organize scholarship-specific documentary requirements, and assist users in identifying opportunities that match their profile. It also uses optical character recognition and general image enhancement techniques to extract the General Weighted Average (GWA) from uploaded academic records for faster eligibility assessment. Through these functions, the proposed system aims to improve the efficiency, accessibility, and convenience of scholarship search and application support.

Project Context

To assist Filipino students in identifying scholarship opportunities aligned with their academic qualifications, profile, and location-related information, the researchers developed a web-based scholarship finder and eligibility platform with an applicant-side mobile application. The system is designed to centralize scholarship information, support eligibility checking, organize documentary requirements, and improve the efficiency of scholarship application and management. The web application serves applicants, administrators, and scholarship providers who manage scholarship programs, while the mobile application provides applicants with access to essential student functions such as scholarship browsing, profile management, document submission, application tracking, and notifications.

The **Landing and Scholarship Browsing Module** serves as the main entry point of the system. It allows users to view available scholarship opportunities, read scholarship descriptions, review benefits, and examine qualifications, deadlines, and provider information. This module is intended to give students easier access to scholarship information that is otherwise scattered across multiple sources.

The **Authentication and Access Control Module** manage user registration, login, email verification, password recovery, and role-based access. It ensures that students, scholarship providers, and administrators are given access only to the functions appropriate to their role in the system.

The **Student Profile Management Module** allows students to input and update personal, academic, and location-related information. These details are used by the system in scholarship matching and eligibility checking. By maintaining an updated student profile, the platform can provide more relevant scholarship recommendations.

The **GWA Extraction Module** allows students to upload academic records such as report cards or transcripts. The system uses optical character recognition and general image enhancement techniques to extract the student's academic score from the uploaded file. This reduces manual entry and supports faster eligibility checking.

The **GWA Issue Reporting Module** provides a correction mechanism for cases in which the extracted academic score is inaccurate. Through this module, students may report discrepancies in the OCR result so that administrators can review and correct the academic data when necessary.

The **Decision Support System Module** evaluates scholarship opportunities using encoded criteria such as academic performance, course alignment, deadline, and location-related information. On the student side, this module generates match guidance that helps users identify scholarships suited to their qualifications. On the provider or administrative side, the same encoded criteria support the review of applicants by showing which submissions meet the scholarship's defined requirements.

The **Document Management Module** allows students to upload, organize, and monitor scholarship-related documents. These may include academic records, valid identification cards, birth certificates, proof of enrollment, income-related documents, and other supporting requirements. The system supports different kinds of documentary requirements depending on the scholarship program.

The **Document Verification Module** enables authorized personnel to review submitted files and classify them as verified or rejected. When a document is rejected, remarks may be provided so that the student can understand the deficiency and resubmit the correct requirement. This module helps maintain the accuracy and completeness of scholarship applications.

The **Scholarship Management Module** enables providers and administrators to create, update, review, and maintain scholarship records. Through this module, authorized users can define scholarship qualifications, deadlines, documentary requirements, provider details, benefits, and assessment-related information. Because scholarship requirements may vary from one program to another, this module supports dynamic and scholarship-specific configuration.

The **Application Wizard Module** guides students through the scholarship application process in a step-by-step manner. It presents the selected scholarship details, checks readiness based on available information and uploaded requirements, and allows students to review and confirm their submission before final application.

The **Application Review Module** allows administrators and scholarship providers to examine student applications, view submitted documents, and record decisions such as approval or rejection. This module supports organized review procedures and allows staff to provide remarks or follow-up instructions when necessary.

The **Application Tracking Module** enables students to monitor the progress of their scholarship applications. Through this module, students can view updates related to document status, review results, approval decisions, and other application-related developments.

The **Location and Mapping Module** allows students to save or update their location and supports the display of scholarship provider offices and remote examination sites. This module helps students view scholarship-related locations and supports location-based matching or distance-related information when available.

The **Activity Logging Module** records major system actions such as account access, document upload, scholarship management actions, and application-related

events. This provides administrators with a monitoring mechanism that supports accountability and system oversight.

The **Email and Notification Service Module** support system-generated communication such as account verification, password reset, and important user updates. It helps ensure that students, providers, and administrators receive essential notifications related to their system activities.

The **Frontend User Interface Module** provides the main user environment for students. Through this module, users can browse scholarships, manage their profile, upload documents, review scholarship matches, and apply through the application wizard. It is designed to be accessible through both web and mobile platforms.

Statement of the Problem

Filipino students encounter difficulty in finding scholarship opportunities that match their qualifications and needs.

Specifically, this study seeks to answer the following questions:

1. How can scholarship information be centralized into a single accessible platform for students?
2. How can the system automatically identify scholarships that match a student's academic qualifications, course, and location-related information?
3. How can the system clearly present scholarship-specific requirements, required documents, and eligibility guidance to students?
4. How can administrators and scholarship providers effectively manage scholarships, documentary requirements, applications, and submitted files?
5. How can the system extract a student's GWA from an academic record and provide a mechanism for correction when OCR-related errors occur?

Objectives of the Study

The general objective of this study is to develop a web- and mobile-based scholarship finder and eligibility platform for Filipino students with a decision support system.

Specifically, the study aims to:

1. Centralize scholarship information in a single platform accessible through web and mobile applications.
2. Match students with scholarship opportunities based on academic qualifications, course, and location-related information.
3. Present scholarship-specific requirements, documentary requirements, and eligibility guidance in a clear and organized manner.
4. Provide administrators and scholarship providers with tools to manage scholarships, applications, users, and uploaded documents.
5. Use OCR to extract a student's GWA from uploaded academic records and provide a reporting mechanism for correction when necessary.

Scope and Limitation of the Study

This study covers the development of a web-based scholarship finder and eligibility platform with applicant-side mobile support for Filipino students. The system is intended to help Filipino students find scholarship opportunities, check eligibility guidance, organize requirements, and submit applications more efficiently. For the testing and initial implementation phase, the study will focus on users and scholarship-related activities within Dasmariñas, Cavite, while the system design remains applicable to Filipino students and scholarship providers in other areas.

The web application provides system access for applicants, scholarship providers, provider team accounts, and administrators. The system includes scholarship browsing, account registration and login, profile management, scholarship matching, document upload and verification, guided application submission, application tracking, notifications, activity logging, reports, map-based location features, and optional OCR-assisted academic record processing when configured. Scholarship providers and administrators can manage scholarships, users, documentary requirements, applications, submitted files, verification records, reports, system activity logs, and provider-side support services through the web application.

The mobile application or mobile support is limited to applicant-side functions only. Applicants may use it for essential student functions such as browsing scholarships, managing their profile, uploading documents, submitting applications, tracking application status, and receiving notifications. Provider and administrator functions are not available in the mobile application and are handled through the web application only..

The study is subject to several limitations. The platform depends on manually encoded scholarship data and does not automatically collect scholarship information from

external websites. OCR accuracy may vary depending on the quality, clarity, and format of uploaded academic records, and manual verification may still be required. The platform requires an internet connection and does not function offline. The quality of scholarship recommendations also depends on the accuracy and completeness of the student and scholarship data stored in the system. The system supports scholarship discovery, eligibility matching, document organization, and pre-screening, but final scholarship approval, legal verification, fund release, and official awarding remain under the authority of the scholarship provider.

Significance of the Study

Students. The system helps students find scholarship opportunities more efficiently by centralizing information, checking eligibility, organizing required documents, and presenting relevant scholarship matches.

Parents and Guardians. The platform may help parents and guardians explore scholarship opportunities and support students in making informed educational decisions.

Educational Institutions. Schools and colleges may use the platform as a more organized channel for sharing scholarship opportunities and encouraging student participation in financial assistance programs.

Scholarship Providers and Organizations. Government agencies, private institutions, and non-profit organizations may use the platform to publish scholarship details, define scholarship-specific requirements, and manage applicants more effectively.

Tel. No.: (046)416-6278 Telefax: (046) Mobile No.: +63918-888-6278

Computer Studies Department

10

Administrators. The system provides administrators with a centralized environment for managing scholarship data, reviewing applications, verifying submitted documents, and monitoring important system activities.

Policy Makers and Educational Planners. Data generated by the platform may help support planning, monitoring, and decision-making related to scholarship access and educational assistance programs.

Future Researchers. The study may serve as a reference for future work involving scholarship information systems, decision support systems, OCR-based academic record processing, and educational information management platforms.

Definition of Terms

Scholarship. Financial assistance granted to students by government agencies, private institutions, or organizations based on criteria such as academic performance, financial need, course, or location.

Scholarship Finder. A system feature that allows students to browse and search scholarship opportunities using eligibility-related filters and information.

Eligibility. The set of qualifications or requirements that a student must satisfy to apply for or receive a scholarship.

Eligibility Checker. A system function that compares student information with scholarship requirements and determines whether the student qualifies.

Decision Support System. A rule-based component that evaluates student and scholarship data to generate match guidance or review support.

General Weighted Average. A student's average academic grade, commonly expressed on a 1.00 to 5.00 scale, and used as an important requirement in many scholarship programs.

OCR. A technology used to detect and convert text from uploaded academic records into machine-readable form for academic score extraction.

Document Management System. A module that allows students to upload, view, and monitor scholarship-related documents and their verification status.

Document Verification. An administrative process in which authorized personnel review submitted documents and classify them as verified or rejected.

Application Wizard. A step-by-step system feature that guides students through scholarship application, document checking, and final submission.

Scholarship Map. An interactive map that displays scholarship provider or examination locations and helps users view location-related information.

Centralized System. A platform that stores and manages scholarship information, applications, and related records in a single unified environment.

Web-Based Platform. A version of the system accessed through a web browser on internet-enabled devices.

Mobile-Based Platform. A version of the system designed for smartphones and tablets, allowing users to access scholarship-related services through a mobile application.

Chapter 2

REVIEW OF RELATED LITERATURE AND STUDIES

Local Literature

According to the Commission on Higher Education (2025a), the CHED Merit Scholarship Program is a government-funded scholarship intended for academically qualified students. The program uses academic performance indicators, including the General Weighted Average (GWA), as part of its eligibility criteria. This shows that academic standing remains an important factor in scholarship qualification. This is relevant to the present study because the proposed system is designed to support centralized scholarship information and faster eligibility checking based on student academic records.

According to the Commission on Higher Education (2025b), the Medical Scholarship and Return Service Program is intended for students pursuing medicine and includes return service obligations after graduation. This indicates that some scholarship programs are highly specific in terms of course requirements and applicant qualifications. This is relevant to the study because the proposed system includes course-based matching, which helps students identify scholarships that are aligned with their academic program.

According to the Commission on Higher Education (2025c), the Scholarship for Future Statisticians is intended for students enrolled in statistics and related degree programs. This demonstrates that not all scholarships are open to all students, as some are designed only for specific academic disciplines. This supports the need for a

scholarship platform that can filter and match opportunities based on course and program relevance.

According to the Commission on Higher Education (2025d), the Scholarships for Instructors' Knowledge Advancement Program is designed for educators who wish to pursue advanced studies. This shows that scholarship opportunities may also be intended for applicant groups beyond undergraduate students. This is relevant to the present study because the proposed system is designed to accommodate different scholarship types and target applicants through configurable scholarship criteria.

According to Riño and Daing (2022), manual handling of student records leads to difficulties in retrieval, organization, and preservation of information. Their study emphasized that paper-based systems are vulnerable to delays, misplaced records, and inefficient processing. This is relevant to the proposed study because the system includes centralized digital storage for student profiles, academic records, and uploaded documents.

Foreign Literature

According to Anwar et al. (2024), decision support systems that use fuzzy logic can improve fairness in scholarship-related evaluation by applying structured criteria instead of relying only on subjective judgment. Their discussion highlights the value of automated and criteria-based assessment in scholarship processes. This is relevant to the present study because the proposed system also applies rule-based evaluation to support scholarship matching and eligibility guidance.

According to Arslantaş et al. (2023), methods such as the Analytic Hierarchy Process, Simple Additive Weighting, and TOPSIS are useful in scholarship recipient

selection because they allow several factors to be evaluated at the same time. Their study shows that scholarship-related decisions often require consideration of multiple variables rather than a single qualification. This supports the proposed system, which evaluates scholarships using several criteria such as academic performance, course alignment, deadline, and location-related information.

According to Kuswanto et al. (2023), the Simple Additive Weighting method is effective in scholarship selection because it allows decision-makers to assign different levels of importance to different criteria. This is significant because scholarship evaluation often gives greater weight to some indicators, such as academic performance, than to others. This supports the proposed system's use of weighted criteria in generating scholarship match guidance.

According to Martin et al. (2024), a decision support system for scholarship admission can reduce the administrative burden of manual evaluation. Their study suggests that automated systems can improve efficiency by reducing repetitive comparison tasks and supporting more systematic decision-making. This is relevant to the proposed system because it also reduces manual scholarship screening by comparing encoded scholarship requirements with student information.

According to Novianto (2023), the Analytic Hierarchy Process helps simplify complex decisions by dividing them into smaller and more manageable criteria. Although not all systems use the same exact method, the principle of structured comparison is useful in scholarship evaluation. This is relevant to the present study because the proposed platform also considers several criteria before producing a scholarship recommendation or match result.

Local Studies

According to Autor and Esguerra (2025), Transcript++ demonstrated that a centralized digital platform can improve the management and accessibility of student-related records. Their study showed that digital systems allow users to retrieve records more easily and monitor documents more efficiently. This is relevant to the present study because the proposed platform also includes document management features for student academic and scholarship-related requirements.

According to Duruin and Siddayao (2024), the development of a digital student records management system improved the storage, retrieval, and organization of school records. Their findings show that computerized systems are more efficient than paper-based processes. This supports the proposed system because scholarship processing also depends on organized storage and retrieval of student information and submitted documents.

According to Mendez et al. (2025), a scholarship management system can become more effective when authorized personnel are provided with a user-friendly administrative interface for updating scholarship records. Their study is relevant because the proposed system also allows providers and administrators to add, update, and maintain scholarship information, qualifications, and documentary requirements through a management module.

According to Paytaren et al. (2023), an educational assistance management system improved the processing and monitoring of applications by integrating multiple tasks into a single digital environment. Their findings suggest that centralized systems improve workflow efficiency and visibility. This is relevant to the present study because the

proposed system also combines scholarship browsing, application support, document checking, and application tracking in one platform.

According to Remegio and Casquejo (2025), a comprehensive scholarship and grants management system can simplify the scholarship process by integrating application, review, and monitoring functions into one platform. Their study supports the need for a centralized scholarship environment. This is relevant to the present study because the proposed system also aims to integrate scholarship information, application support, document management, and review mechanisms in one system.

Foreign Studies

According to Qodriyah et al. (2025), decision support systems can improve objectivity in scholarship candidate selection by applying clearly defined criteria rather than relying on subjective judgment. Their findings suggest that data-driven evaluation strengthens fairness and transparency. This is relevant to the proposed study because the system uses encoded scholarship criteria and student data to generate match guidance and support applicant review.

According to Parianthana (2025), the weighted product method is useful in scholarship decision-making because it combines multiple weighted criteria into a single evaluative result. This supports the broader principle that scholarship systems should consider several relevant indicators rather than depend on only one. This is relevant to the present study because the proposed platform also uses several factors in scholarship matching.

According to Epil (2025), automated scholarship evaluation systems improve processing speed by reducing the time required for manual review and initial screening.

Their study suggests that digital systems can help both students and staff by narrowing the set of relevant scholarship opportunities and reducing repetitive work. This is relevant to the proposed system because it assists students in identifying suitable scholarships while also supporting more efficient administrative review.

According to Efandari et al. (2025), a decision support system can be implemented effectively even in institutions with limited technological resources. Their study suggests that web-based scholarship technologies are practical and accessible even outside highly resourced institutions. This is relevant to the present study because the proposed system is also intended to function as an accessible platform for scholarship management and student support.

According to Adalı and Çağlar (2023), multi-criteria decision-making methods can support scholarship-related decisions by evaluating several factors through a structured process. Their study shows that scholarship selection becomes more systematic when based on transparent criteria rather than unstructured judgment. This supports the present study because the proposed platform also evaluates scholarship opportunities using several measurable indicators.

Synthesis

The reviewed literature and studies collectively indicate the need for a more organized and efficient approach to scholarship discovery and management. The CHED scholarship sources show that scholarship opportunities are numerous, but their qualifications, benefits, deadlines, and documentary requirements differ widely. Because this information is often distributed across multiple sources, students may experience difficulty in locating suitable opportunities and determining whether they qualify.

The foreign literature further suggests that decision support systems and weighted evaluation methods can improve the fairness, consistency, and efficiency of scholarship-related decision-making. These studies support the use of structured criteria and rule-based mechanisms in evaluating scholarship opportunities and applicants. In the present study, this concept is reflected in the system's use of scholarship matching and encoded eligibility rules based on academic performance, course alignment, deadline, and location-related information.

The local and foreign studies on digital record management and scholarship platforms also demonstrate the advantages of computerized systems over manual and paper-based processes. These studies consistently show that digital systems improve organization, retrieval, monitoring, and administrative efficiency. Building on these findings, the proposed system integrates scholarship browsing, eligibility checking, dynamic documentary requirements, OCR-assisted GWA extraction, application support, and administrative review into a centralized web- and mobile-based platform.

NATIONAL COLLEGE OF SCIENCE AND TECHNOLOGY

20

Overall, the reviewed literature and studies establish both the relevance and necessity of the proposed system. They support the need for a centralized scholarship platform and the use of decision support mechanisms in improving access, efficiency, and transparency in scholarship application and management.

Chapter 3

TECHNICAL BACKGROUND

TOrganizational Chart

Figure 1. *Organizational Chart of Scholarship Finder System*

Figure 1 shows the team structure behind the development of the Scholarship Finder System. It lays out who does what, so everyone knows their role, who they report to, and what they're responsible for.

Project Manager (Charles Howard A. Mercado) - Charles leads the team. He plans what needs to be done, assigns tasks, and makes sure everyone stays on track. He also keeps an eye on progress and steps in to solve problems when things get tricky. His job is to make sure the project finishes on time and meets the standards.

Programmer (James Louis H. Rosario) - James handles the coding. He writes, tests, and fixes the system's code, turning the team's ideas into something that actually works. He also hunts down bugs and makes sure everything runs smoothly.

Front-End Developer (Manuel Shawn C. Salditos) - Manuel works on how the system looks and feels. He builds the pages, buttons, and forms so users can navigate easily. He also makes sure the design works and looks good whether you're using a computer or a phone.

Data Analyst (Ariston D. Andrada) - Ariston is the one who handles all the data stuff. He keeps an eye on how people are actually using the system—what's working, what's not, where things are dragging. From that, he figures out what could be better and puts together reports so the rest of the team knows where to focus their efforts. Basically, he helps everyone make smarter decisions based on what the numbers say.

System Flowchart

A system flowchart is a simple diagram that shows how a system works. It maps out the steps, where information goes, what goes in and out, and where decisions are made. It uses standard symbols to make everything clear so you can see how pieces fit together, making it easier to understand and design.

Figure 2. Home Page (HP) System of Scholarship Finder

Figure 2 shows the Home Page flowchart of Scholarship Finder. This page serves as the main entry point where users can sign in, create an applicant account, register as a provider, or access the provider dashboard. If the user is already logged in, the system checks the user role and directs providers and administrators to their respective dashboards, while applicants may continue from the Home Page.

Figure 3. Login Page (LP) System of Scholarship Finder

Figure 3 shows the Login Page flowchart of Scholarship Finder. Users enter their credentials to access the system. The system checks if the login details are valid, if the account is suspended, or if a password reset is required. Once login is successful, applicants are directed to the Applicant Dashboard, providers to the Provider Dashboard, and administrators to the Admin Dashboard. Users may also proceed to the Forgot Password Page when needed.

Figure 4. *Registration Page (RP) System of Scholarship Finder*

Figure 4 shows the Registration Page flowchart of Scholarship Finder. Users enter their account details and choose whether to register as an applicant or provider. The system validates the submitted information, checks if the email or username is already used, and sends a verification code to the user's email when the details are valid. If errors occur, the user is returned to the registration form.

Figure 5. *Registration Verification Process (RVP) System of Scholarship Finder*

Figure 5 shows the Registration Verification Process flowchart of Scholarship Finder. Users enter the verification code sent to their email to complete registration. The system checks if the code is expired, valid, or if the allowed attempts have been exceeded. Users may also request a new code when allowed. Once verified, the system creates the user account and profile, records the activity, and redirects the user to the Login Page.

Figure 6. *Email Verification Process (EVP) System of Scholarship Finder*

Figure 6 shows the Email Verification Process flowchart of Scholarship Finder. When a user opens a verification link, the system checks if the link is valid and whether the account is already verified. If needed, the system marks the email as verified, sends a notice, and records the activity. The user is then redirected to the Login Page or to the proper dashboard based on their role.

Figure 7. *Forgot Password Page (FPP) System of Scholarship Finder*

Figure 7 shows the Forgot Password Page flowchart of Scholarship Finder. Users enter their email address to request password recovery. The system validates the email and prepares a reset link if the account exists. A general notice is shown after the request, allowing the user to return to the Login Page, retry the request, or end the process.

Figure 8. *Reset Password Page (RPP) System of Scholarship Finder*

Figure 8 shows the Reset Password Page flowchart of Scholarship Finder. Users enter their email, reset token, new password, and password confirmation. The system validates the information, checks if the reset token is valid and active, then updates the password. After a successful reset, the system clears the reset status, deletes the reset token, records the activity, and redirects the user to the Login Page.

Figure 9. *Role-Based Access Control Process (RBAC) System of Scholarship Finder*

Figure 9 shows the Role-Based Access Control Process flowchart of Scholarship Finder. When a user requests a protected page, the system checks if the user is logged in, if the user's role is allowed, and if the required permission is granted. Unauthorized users are redirected or denied access, while authorized users are allowed to proceed to the requested module.

Figure 10. *Account Setup Page (ASP) System of Scholarship Finder*

Figure 10 shows the Account Setup Page flowchart of Scholarship Finder. The system checks the user role before allowing access to account setup. Administrators and providers are redirected to their dashboards, while applicants complete or update their profile information. The system validates the submitted details, saves the profile, records the activity, and directs the applicant to the Applicant Dashboard.

Figure 11. Applicant Dashboard Page (ADP) System of Scholarship Finder

Figure 11 shows the Applicant Dashboard Page flowchart of Scholarship Finder.

This page serves as the main workspace for applicants after logging in. The system loads applicant data such as profile details, scholarship activity, applications, documents, and notifications. From the dashboard, applicants can proceed to scholarships, applications, documents, profile, notifications, or logout.

Figure 12. *Applicant Profile Page (APP) System of Scholarship Finder*

Figure 12 shows the Applicant Profile Page flowchart of Scholarship Finder. Applicants can view and update their personal, academic, and location-related information. The system validates profile changes before saving them and records the activity. Applicants may also manage verification proof by uploading, viewing, or deleting submitted files.

Computer Studies Department

Figure 13. *Applicant Verification Document Process (AVDP) System of Scholarship Finder*

Figure 13 shows the Applicant Verification Document Process flowchart of Scholarship Finder. Applicants upload proof documents needed for profile verification. The system validates the selected file, stores valid uploads, sets the verification status to pending, and records the activity. Applicants may also delete uploaded proof documents after confirmation.

Figure 14. *Scholarship Browsing Page (SBP) System of Scholarship Finder*

Figure 14 shows the Scholarship Browsing Page flowchart of Scholarship Finder. Applicants can view available scholarship opportunities and use search, filter, or sorting options to refine the list. From this page, they may open scholarship details, save a scholarship, or return to the Applicant Dashboard.

Figure 15. *Scholarship Details Page (SDP) System of Scholarship Finder*

Figure 15 shows the Scholarship Details Page flowchart of Scholarship Finder. This page displays the selected scholarship’s qualifications, benefits, deadline, requirements, provider information, and location details. The system also checks eligibility match and document readiness. Applicants may save the scholarship, proceed to the application wizard, view map information, or return to scholarship browsing.

Figure 16. *Scholarship Eligibility Matching Process (SEMP) System of Scholarship Finder*

Figure 16 shows the Scholarship Eligibility Matching Process flowchart of Scholarship Finder. The system compares the applicant's profile with the selected scholarship's criteria, such as academic information, course or strand, grade or year level, location, and other requirements. If profile details are incomplete, the applicant is guided to update the profile. The system then shows the match result or eligibility guidance.

Figure 17. *Scholarship Bookmarking Process (SBMP) System of Scholarship Finder*

Figure 17 shows the Scholarship Bookmarking Process flowchart of Scholarship Finder. Applicants can save or remove scholarships from their saved list. The system checks if the user is logged in and whether the scholarship is already saved. It then updates the saved status and returns the applicant to the scholarship details page.

Figure 18. *Application Wizard Process (AWP) System of Scholarship Finder*

Figure 18 shows the Application Wizard Process flowchart of Scholarship Finder. The system guides applicants before submission by loading the selected scholarship, checking profile information, and checking document readiness. If requirements are missing, the applicant may update the profile or upload documents. If ready, the applicant reviews the application and proceeds to submission.

Figure 19. *Application Submission Process (ASP-SUB) System of Scholarship Finder*

Figure 19 shows the Application Submission Process flowchart of Scholarship Finder. The system checks if the applicant is logged in, verifies that the applicant has not already applied, and checks profile and document readiness. Once ready, the system creates the application, attaches prepared documents, creates the timeline, notifies the provider, records the activity, and redirects the applicant to the applications page.

Figure 20. *Applicant Applications Page (AAP) System of Scholarship Finder*

Figure 20 shows the Applicant Applications Page flowchart of Scholarship Finder. Applicants can view and monitor their submitted scholarship applications. The system loads application records and allows applicants to filter the list, view application details, respond to application requirements, acknowledge schedules, upload documents, or return to the dashboard.

Figure 21. *Applicant Application Detail Page (AADP) System of Scholarship Finder*

Figure 21 shows the Applicant Application Detail Page flowchart of Scholarship Finder. This page displays the full details of a submitted application, including application status, timeline updates, and document status. From this page, applicants may upload additional documents, view submitted files, respond to application requirements or decisions, acknowledge schedules, or return to the applications page.

Figure 22. *Applicant Application Response Process (AARP) System of Scholarship Finder*

Figure 22 shows the Applicant Application Response Process flowchart of Scholarship Finder. The system checks whether the application requires a response from the applicant. If a response is needed, the applicant may accept or decline. The system saves the response, updates the application status, notifies the provider, records the activity, and returns the applicant to the application detail page.

Figure 23. *Application Schedule Acknowledgment Process (ASAP) System of Scholarship Finder*

Figure 23 shows the Application Schedule Acknowledgment Process flowchart of Scholarship Finder. Applicants use this process to confirm that they have seen an application-related schedule, such as an interview, examination, orientation, or follow-up activity. The system checks the schedule record, records the acknowledgment if needed, updates the record, and returns the applicant to the application detail page.

Figure 24. *Applicant Documents Page (ADOC) System of Scholarship Finder*

Figure 24 shows the Applicant Documents Page flowchart of Scholarship Finder. Applicants can manage their prepared scholarship documents in this page. The system loads uploaded documents and allows applicants to upload, view, download, or delete files after confirmation. Deleted documents are recorded and the document list is updated.

Figure 25. *Prepared Document Upload Process (PDUP) System of Scholarship Finder*

Figure 25 shows the Prepared Document Upload Process flowchart of Scholarship Finder. Applicants upload reusable documents before applying for scholarships. The applicant selects a file and document type, then the system validates the upload. If valid, the system stores the file, saves the document record, logs the activity, and returns the applicant to the documents page.

Figure 26. *Application Document Upload Process (ADUP) System of Scholarship*

Finder

Figure 26 shows the Application Document Upload Process flowchart of Scholarship Finder. Applicants upload documents for a specific scholarship application. The system verifies that the application belongs to the logged-in applicant, validates the selected file and requirement, stores the upload, sets the document status to pending, records the activity, and returns the applicant to the application detail page.

Figure 27. *Applicant Support Report Process (ASRP) System of Scholarship Finder*

Figure 27 shows the Applicant Support Report Process flowchart of Scholarship Finder. Applicants use this process to submit concerns or issue reports. The system validates the concern details, creates a support report, sets its status to open, notifies the administrator, records the activity, and returns the applicant to the dashboard.

Figure 28. *Location and Mapping Process (LMP) System of Scholarship Finder*

Figure 28 shows the Location and Mapping Process flowchart of Scholarship Finder. The system loads the scholarship's location details and checks if a valid address or map location is available. If available, applicants can view address details or open the map link. If no location is set, the system displays an unavailable notice and returns to the scholarship details page.

Figure 29. *Provider Registration Page (PRP) System of Scholarship Finder*

Figure 29 shows the Provider Registration Page flowchart of Scholarship Finder. Scholarship providers enter account information and provider details such as organization name, provider type, website, address, and description. The system validates the information, checks email and username availability, and sends a verification code when the details are valid.

Figure 30. *Provider Dashboard Page (PDP) System of Scholarship Finder*

Figure 30 shows the Provider Dashboard Page flowchart of Scholarship Finder.

This page serves as the main workspace for scholarship providers. The system loads provider data, checks verification status, and displays provider-related modules. Verified providers may access programs, applications, review, reports, team management, profile, or logout, while unverified providers are guided to complete verification.

Figure 31. *Provider Profile Page (PPF) System of Scholarship Finder*

Figure 31 shows the Provider Profile Page flowchart of Scholarship Finder. Providers can manage their organization and account profile information. The system loads the provider profile, validates profile updates, saves changes, and records the activity. Providers may also upload, download, or delete verification proof documents.

Figure 32. *Provider Verification Document Process (PVDP) System of Scholarship*

Finder

Figure 32 shows the Provider Verification Document Process flowchart of Scholarship Finder. Providers upload proof documents needed for account verification. The system validates the selected file, stores valid uploads, sets the verification status to pending, and records the activity. Providers may also delete uploaded proof documents after confirmation.

Figure 33. *Provider Programs Page (PPP) System of Scholarship Finder*

Figure 33 shows the Provider Programs Page flowchart of Scholarship Finder.

Providers use this page to manage scholarship program records. The system loads the provider's programs and allows providers to search, filter, create, edit, duplicate, or view applications for a selected program.

Figure 34. *Provider Program Form Page (PPFP) System of Scholarship Finder*

Figure 34 shows the Provider Program Form Page flowchart of Scholarship Finder. Providers use this form to create or edit scholarship programs. The system checks if the provider is verified, validates the scholarship details, saves the program as a draft or submits it for review, notifies the administrator when needed, and records the activity.

Figure 35. *Scholarship Event Management Process (SEMP-E) System of Scholarship Finder*

Figure 35 shows the Scholarship Event Management Process flowchart of Scholarship Finder. Providers use this process to manage scholarship-related events such as examinations, interviews, orientations, or other scheduled activities. The system validates event details, saves or updates the event, marks events as complete when confirmed, notifies affected users when needed, and records the activity.

Figure 36. *Scholarship Event Attendance Process (SEAP) System of Scholarship Finder*

Figure 36 shows the Scholarship Event Attendance Process flowchart of Scholarship Finder. Providers use this process to update applicant attendance for scholarship-related events. The system loads the event and connected applicants, validates attendance updates, saves the attendance records, records the activity, and returns the provider to the applications area.

Figure 37. *Provider Applications Page (PAP) System of Scholarship Finder*

Figure 37 shows the Provider Applications Page flowchart of Scholarship Finder. Providers use this page to manage applications submitted to their scholarship programs. The system loads application records and allows providers to filter applications, view details, assign reviewers, manage schedules, manage events, update attendance, export records, or return to the dashboard.

Figure 38. *Provider Program Applications Page (PPAP) System of Scholarship Finder*

Figure 38 shows the Provider Program Applications Page flowchart of Scholarship Finder. Providers use this page to view applications under a specific scholarship program. The system loads the selected program and its applications, then allows providers to filter the list, view application details, assign reviewers, manage schedules, or return to the programs page.

Figure 39. *Provider Application Detail Page (PADP) System of Scholarship Finder*

Figure 39 shows the Provider Application Detail Page flowchart of Scholarship Finder. This page displays a specific applicant submission, including applicant information, submitted documents, timeline updates, and decision support guidance. Providers may verify documents, assign reviewers, manage schedules, record a decision, or return to the applications page.

Figure 40. *Application Reviewer Assignment Process (ARAP) System of Scholarship Finder*

Figure 40 shows the Application Reviewer Assignment Process flowchart of Scholarship Finder. Providers use this process to assign a reviewer to an application. The system loads the application and eligible reviewers, checks whether the selected reviewer is allowed, assigns the reviewer, notifies the reviewer, records the activity, and returns to the application detail page.

Figure 41. *Application Schedule Management Process (ASMP) System of Scholarship Finder*

Figure 41 shows the Application Schedule Management Process flowchart of Scholarship Finder. Providers use this process to create, update, or track schedules related to an application, such as interviews, examinations, orientations, or follow-up activities. The system validates schedule details, saves or updates the schedule, notifies the applicant when needed, records the activity, and returns to the application detail page.

Figure 42. *Provider Application Review and Decision Process (PARDP) System of Scholarship Finder*

Figure 42 shows the Provider Application Review and Decision Process flowchart of Scholarship Finder. Providers review applicant details, submitted documents, and decision support guidance before recording a decision. The provider may approve, reject, waitlist, request an update, or cancel the process. Once saved, the system updates the application status, notifies the applicant, records the activity, and returns to the application detail page.

Figure 43. *Provider Document Verification Process (PDVP) System of Scholarship Finder*

Figure 43 shows the Provider Document Verification Process flowchart of Scholarship Finder. Providers review documents submitted for a scholarship application. The provider may verify the document, reject it with remarks, return it to pending status, or cancel the process. The system updates the document status, notifies the applicant, records the activity, and returns to the application detail page.

Figure 44. *Provider Team Management Page (PTMP) System of Scholarship Finder*

Figure 44 shows the Provider Team Management Page flowchart of Scholarship Finder. Providers use this page to manage team accounts under their organization. The system loads team records and allows providers to add, edit, view, or change the status of team accounts. Status changes require confirmation and are recorded by the system.

Figure 45. *Provider Team Account Form Page (PTAFP) System of Scholarship Finder*

Figure 45 shows the Provider Team Account Form Page flowchart of Scholarship Finder. Providers use this form to create or edit team accounts. The system loads the selected account when editing, validates account information and permissions, saves the account record, records the activity, and returns to the team management page.

Figure 46. *Provider Reports Page (PRP-R) System of Scholarship Finder*

Figure 46 shows the Provider Reports Page flowchart of Scholarship Finder. Providers use this page to manage support or issue reports related to their account or scholarship programs. The system loads report records and allows providers to filter reports, view details, update report status, or return to the dashboard. Status updates are validated, saved, and recorded by the system.

Figure 47. *Provider Insights Page (PIP) System of Scholarship Finder*

Figure 47 shows the Provider Insights Page flowchart of Scholarship Finder. Providers use this page to view summary information and analytics for their scholarship programs. The system displays metrics such as application counts, program performance, document readiness, and review progress. Providers may filter insights, view applications, view programs, export records, or return to the dashboard.

Figure 48. *Provider Export Applications Process (PEAP) System of Scholarship Finder*

Figure 48 shows the Provider Export Applications Process flowchart of Scholarship Finder. Providers use this process to export application records. The system checks provider authorization and permission, retrieves application records, generates a CSV file or empty export if no records are available, downloads the file, records the activity, and returns to the applications page.

Figure 49. Admin Dashboard Page (ADMP) System of Scholarship Finder

Figure 49 shows the Admin Dashboard Page flowchart of Scholarship Finder. This page serves as the main workspace for administrators. The system loads dashboard data such as users, reviews, reports, logs, and platform activity. Administrators may access user management, reviews, reports, logs, profile, export records, or logout.

Figure 50. *Admin Manage Users Page (AMUP) System of Scholarship Finder*

Figure 50 shows the Admin Manage Users Page flowchart of Scholarship Finder. Administrators use this page to manage system user accounts. The system loads user records and allows administrators to search or filter users, add or edit accounts, view user details, perform account control actions, export records, or return to the dashboard.

Figure 51. Admin Account Form Page (AAFP) System of Scholarship Finder

Figure 51 shows the Admin Account Form Page flowchart of Scholarship Finder. Administrators use this form to create or edit user accounts. The system loads the selected account when editing, allows the administrator to set account details, role, and permissions, validates the submitted information, saves the account record, records the activity, and returns to the user management page.

Figure 52. Admin User Account Control Process (AUACP) System of Scholarship

Finder

Figure 52 shows the Admin User Account Control Process flowchart of Scholarship Finder. Administrators use this process to control user account access. The system allows administrators to change account status, require password reset, verify email, or resend verification email. These actions update the user record or prepare the needed email, record the activity, and return to the user management page.

Figure 53. *Admin Reviews Page (ARP) System of Scholarship Finder*

Figure 53 shows the Admin Reviews Page flowchart of Scholarship Finder. Administrators use this page to access review queues for providers, applicants, and scholarship programs. The system loads review records and allows administrators to select a review type, apply filters, or return to the dashboard.

Figure 54. Admin Provider Review Page (APRP) System of Scholarship Finder

Figure 54 shows the Admin Provider Review Page flowchart of Scholarship Finder. Administrators use this page to review scholarship provider accounts. The system displays the provider profile and submitted verification proof. Administrators may approve the provider, reject it with remarks, set the review to pending, or return to the reviews page. Saved decisions update the provider status, notify the provider, and record the activity.

Figure 55. Admin Applicant Review Page (AARP-ADM) System of Scholarship Finder

Figure 55 shows the Admin Applicant Review Page flowchart of Scholarship Finder. Administrators use this page to review applicant profile verification records. The system displays applicant profile details and submitted verification proof. Administrators may approve, reject with remarks, return the status to pending, or go back to the reviews page. Saved decisions update the applicant verification status, notify the applicant, and record the activity.

Figure 56. *Admin Scholarship Review Page (ASRP-ADM) System of Scholarship*

Finder

Figure 56 shows the Admin Scholarship Review Page flowchart of Scholarship Finder. Administrators use this page to review scholarship programs submitted by providers. The system displays scholarship details and provider information. Administrators may approve and publish the scholarship, reject it with remarks, request changes, keep it pending, or return to the reviews page. Saved decisions update the scholarship status, notify the provider, and record the activity.

Figure 57. *Admin Reports Page (ARP-R) System of Scholarship Finder*

Figure 57 shows the Admin Reports Page flowchart of Scholarship Finder. Administrators use this page to monitor support or issue reports submitted through the system. The system loads report records and allows administrators to filter reports, view details, update report status, or return to the dashboard. Status updates are validated, saved, may notify the concerned user, and are recorded by the system.

Figure 58. *Admin Logs Page (ALP) System of Scholarship Finder*

Figure 58 shows the Admin Logs Page flowchart of Scholarship Finder. Administrators use this page to monitor activity records generated by system actions. The system loads activity logs and allows administrators to filter entries, view log details, or return to the dashboard. This supports monitoring of actions such as logins, registrations, document uploads, scholarship management, reports, and application-related events.

Figure 59. *Admin Profile Page (APF) System of Scholarship Finder*

Figure 59 shows the Admin Profile Page flowchart of Scholarship Finder. Administrators use this page to manage their profile information. The system loads the admin profile, allows profile editing, validates submitted changes, saves the updated record, records the activity, and returns to the profile page.

Figure 60. *Admin Export Records Process (AERP) System of Scholarship Finder*

Figure 60 shows the Admin Export Records Process flowchart of Scholarship Finder. Administrators use this process to export system records such as users or applications. The system checks admin authorization and export permission, retrieves the selected records, generates a CSV file or empty export if no records are available, downloads the file, records the activity, and returns to the admin dashboard.

Figure 61. *Notification Module (NTF) System of Scholarship Finder*

Figure 61 shows the Notification Module flowchart of Scholarship Finder. The system creates notifications when important events occur, such as registration activity, scholarship review updates, document status changes, application decisions, schedule updates, or report updates. Users can view notifications, mark one or all notifications as read, and open related links when available.

Figure 62. *Activity Logging Module (ALM) System of Scholarship Finder*

Figure 62 shows the Activity Logging Module flowchart of Scholarship Finder. The system records important actions such as registration, login, logout, password reset, document upload, scholarship management, application review, report handling, and account control. These records are stored as activity logs and can be viewed by authorized administrators through the Admin Logs Page.

Figure 63 shows the Data Flow Diagram of Scholarship Finder. It illustrates how data moves between applicants, scholarship providers, administrators, system processes, storage, and the email service. Users provide account data through sign up and login, applicants manage profiles, documents, and applications, providers manage scholarships and review submissions, and administrators handle reviews, reports, logs, and user management. The system stores records in the database, saves uploaded files in file storage, sends email verification or password recovery messages, and provides notifications, reports, and status updates to the appropriate users.

Figure 64. *System Architecture of the Proposed System*

Figure 64 shows the System Architecture of the proposed Scholarship Finder system. It presents the structure of the web-based platform, beginning with users such as guests, applicants, scholarship providers, provider team accounts, and administrators. These users access the system through their respective web interfaces, which communicate with the Laravel web server. The frontend uses a Blade layout shell, Vue.js pages, and Tailwind CSS, while the backend uses controllers, middleware, and services to process authentication, role-based access, scholarship management, eligibility matching, documents, applications, reports, notifications, and logs. The system stores structured data in MySQL, manages uploaded files through file storage, and uses the email service for verification and password recovery.
