Platform Process Guide

Applicant provider and admin walkthrough with account labelled screenshots

Follow the process from the applicant action to the responsible provider or admin action and then back to the applicant. Each walkthrough identifies the account, the record to open, prerequisites, controls, expected result and next owner. Use specialist roles first; manager and superadmin views remain last.

Use Orivanta Open Learning Grant for a new application. The other published programs have closed intakes and prepared selection or support records. The same four applicants have records in several scholarships, so always check both the applicant name and the program. Use Orivanta Academic Merit Scholarship for DSS, Continuing Learners Grant for agreement and document review, Term Assistance Grant for receipt and renewal, and School Essentials Award for one-time support.

Updated November 14 2026 Philippine time. Only hosting was reset. Local data and its older accounts were not changed. Hosting has one provider organization, Orivanta Learning Foundation, with 28 accounts, 6 applicants, 10 scholarships and 25 applications. Four verified applicants hold 5 to 7 applications each; the other two accounts demonstrate profile completion and verification. Old hosted logins no longer work.

Screenshots in this guide are current captures from the hosted single-provider dataset. They identify the signed-in account and record context. Applicant pictures are neutral silhouettes. Capturing the screens did not save decisions, submit scores, verify accounts, confirm receipts or make payments.

All listed accounts use password123 for this private demonstration. Applicant photos are the platform silhouette. Use fictional supporting files and payout details. A saved payment or distribution record is not evidence of a real transfer; external payments, refunds and email delivery are not performed by this guide.

Applicant accounts and scholarship records

Use learner.aurora, learner.brio, learner.cielo and learner.dune throughout the walkthrough. Each account has several scholarship records at different starting points; one application still follows one stage at a time.

learner.profile completes its evidence and learner.verification awaits admin review. Published demo programs allow other scholarship support, so these parallel awards do not contradict eligibility. Every submitted application has a fixed scoring policy.

Applicant login	Scholarship and starting action	Responsible account
learner.profile	Complete the profile and supporting evidence	Applicant
learner.verification	Review submitted profile evidence	lumenops.reviews
learner.aurora	Orivanta Open Learning Grant Start a new application	Applicant
learner.aurora	Orivanta Campus Access Scholarship Review the submitted files and record pre-screening.	orivanta.reviewer
learner.brio	Orivanta Campus Access Scholarship Arrange formal verification and record the result.	orivanta.selection
learner.aurora	Orivanta Applied Science Scholarship Record the completed examination outcome and evaluation.	orivanta.selection
learner.brio	Orivanta Applied Science Scholarship Assign the applicant to an examination session.	orivanta.selection
learner.cielo	Orivanta Applied Science Scholarship Acknowledge the upcoming examination schedule.	Applicant
learner.dune	Orivanta Applied Science Scholarship Attendance and proof are present; complete the examination session.	orivanta.selection
learner.aurora	Orivanta Leadership Scholarship Record the completed interview outcome and evaluation.	orivanta.selection
learner.brio	Orivanta Leadership Scholarship Acknowledge the upcoming online interview.	Applicant
learner.cielo	Orivanta Leadership Scholarship Assign an interview session.	orivanta.selection
learner.aurora	Orivanta Academic Merit Scholarship Compare the first scored candidate; the tester records the final decision.	orivanta.decisions
learner.brio	Orivanta Academic Merit Scholarship Compare the second scored candidate; the tester records the final decision.	orivanta.decisions
learner.cielo	Orivanta Academic Merit Scholarship Compare the third scored candidate; the tester chooses selected or waitlisted.	orivanta.decisions
learner.dune	Orivanta Academic Merit Scholarship Record the missing interview score before final comparison.	orivanta.selection

Applicant login	Scholarship and starting action	Responsible account
learner.aurora	Orivanta Continuing Learners Grant Review and accept the recipient agreement.	Applicant
learner.brio	Orivanta Continuing Learners Grant Schedule the first allowance release.	orivanta.releases
learner.cielo	Orivanta Continuing Learners Grant Review original documents after the attended check-in.	orivanta.monitoring
learner.dune	Orivanta Continuing Learners Grant Close the check-in whose requirements are met.	orivanta.monitoring
learner.aurora	Orivanta Term Assistance Grant Confirm receipt of the released allowance.	Applicant
learner.brio	Orivanta Term Assistance Grant Renew or complete support after closed checks and confirmed benefits.	orivanta.recipients
learner.cielo	Orivanta Term Assistance Grant View the upcoming document handoff and map.	Applicant
learner.dune	Orivanta Term Assistance Grant Review the submitted fictional e-wallet destination.	orivanta.releases
learner.aurora	Orivanta School Essentials Award Schedule the one-time award; no recurring monitoring is required.	orivanta.releases
learner.brio	Orivanta School Essentials Award Record distribution for the scheduled one-time award.	orivanta.releases
learner.cielo	Orivanta School Essentials Award Confirm receipt of the released one-time award.	Applicant
learner.dune	Orivanta School Essentials Award Complete the award after its receipt has been confirmed.	orivanta.recipients

Provider and admin account groups

There is one organization only. Its specialist logins are orivanta.programs, orivanta.reviewer, orivanta.selection, orivanta.decisions, orivanta.recipients, orivanta.monitoring, orivanta.releases, orivanta.profile, orivanta.team, orivanta.support and orivanta.billing. orivanta.manager has combined workspaces; orivanta is the representative. orivanta.newstaff demonstrates first-login password setup. These staff accounts are not additional provider organizations.

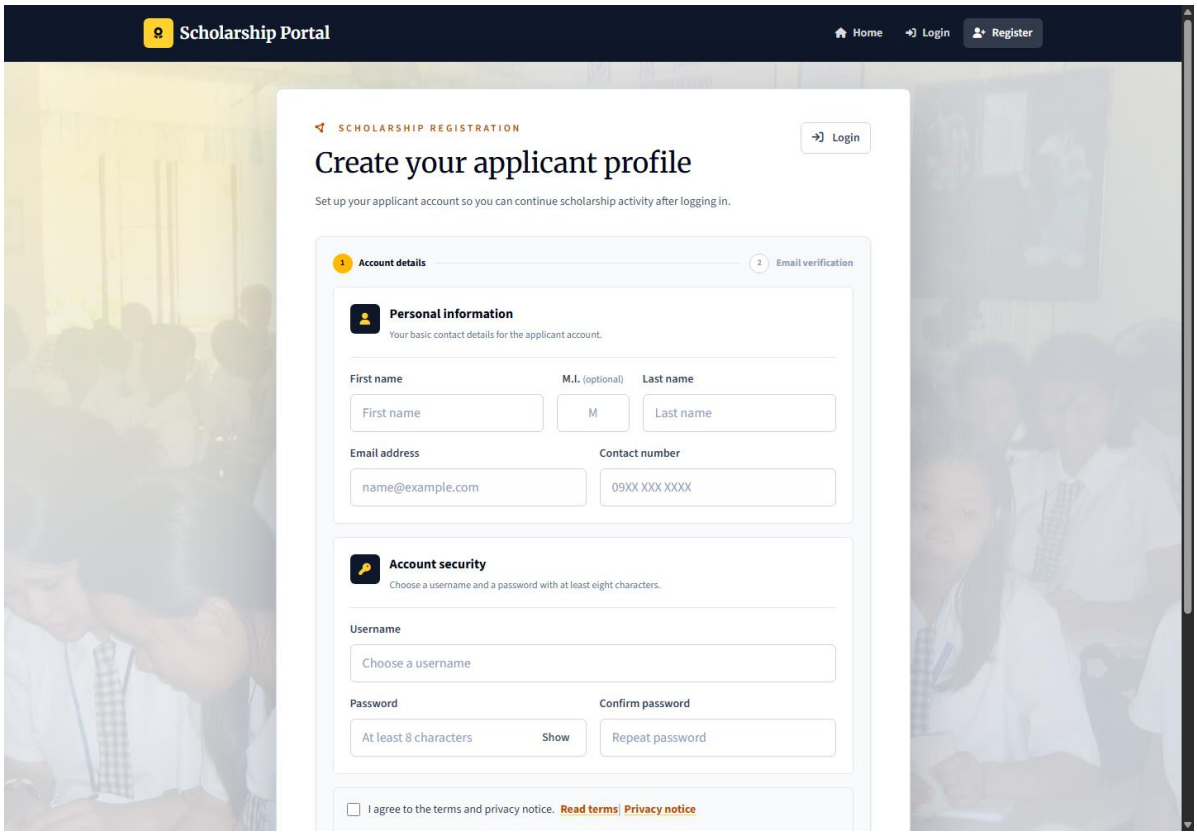

Admin logins are lumenops.accounts, lumenops.reviews, lumenops.support, lumenops.billing, lumenops.finance and lumenops.records. Use lumenops.manager for portal oversight and lumenops.root for superadmin governance. The single provider is already approved; there is no second organization waiting for verification. Show manager and superadmin views after the specialist actions.

1 Registration and sign in

Signed in account: Not signed in

Page shown: Registration

A new applicant or provider starts at registration, selects the appropriate account type and supplies the requested identity and contact information. Follow the email verification instructions before continuing. An existing demo account instead signs in using its username or email. The middle initial is optional.

Current hosted view | Not signed in | registration

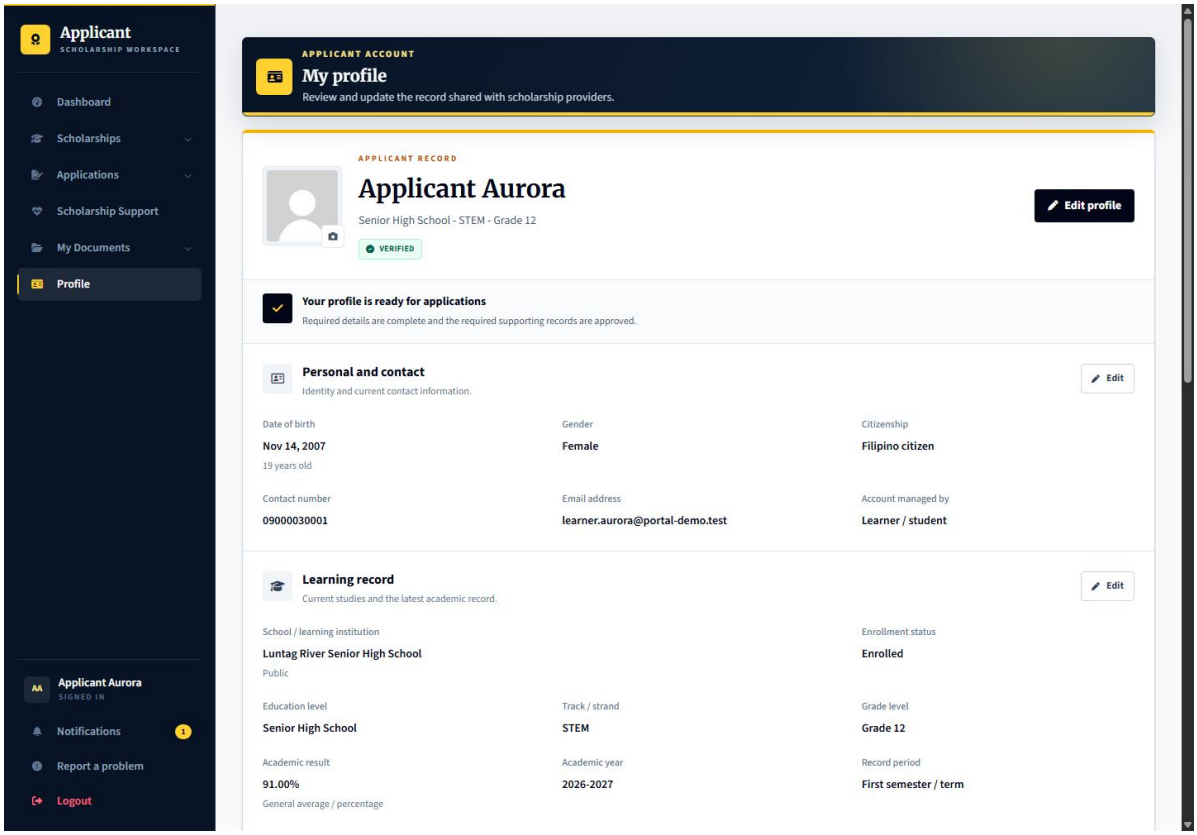

Applicant: registers and completes profile evidence. Provider: registers the organization and submits its verification information. Admin: operational accounts are managed through the authorized admin account workflow; provider and applicant verification are handled by lumenops.reviews. No new account was registered for this screenshot.

2 Applicant profile and supporting evidence

Signed in account: learner.aurora

Page shown: Applicant profile

The applicant maintains identity, contact, education, household, and location details. Section edit modals keep the applicant on their record. Upload documents that support the profile rather than merely filling the text fields.

Current hosted view | learner.aurora | applicant profile

Applicant: complete the record and evidence. Provider: later sees the submitted applicant record and which information is self-declared. Admin: the review officer verifies the profile evidence before the applicant can apply.

Edit the applicant information in its modal

Signed in account: learner.profile

1. Choose Edit beside the personal information section.

2. Update only the details that need correction and check the required fields.

3. Review the changes before Save changes; Cancel leaves the record unchanged.

4. Photo changes can save immediately through the photo controls, so do not replace or remove a photo merely to demonstrate the form.

3 Admin applicant verification

Signed in account: lumenops.reviews

Page shown: Admin applicant review

The review officer checks supporting files first. In the academic record review, Academic results contains the grading scale and verified result; accepting that document saves any correction. Step 2 then records only the overall profile outcome and review note. Accepting evidence does not verify the whole profile or select an applicant for a scholarship. Use learner.verification for this queue and lumenops.reviews to review it.

Applicant: learner.verification supplies or corrects evidence. Provider: cannot replace platform profile verification with a scholarship decision. Admin: lumenops.reviews performs verification; superadmin is not the normal operational reviewer.

Open the applicant verification record

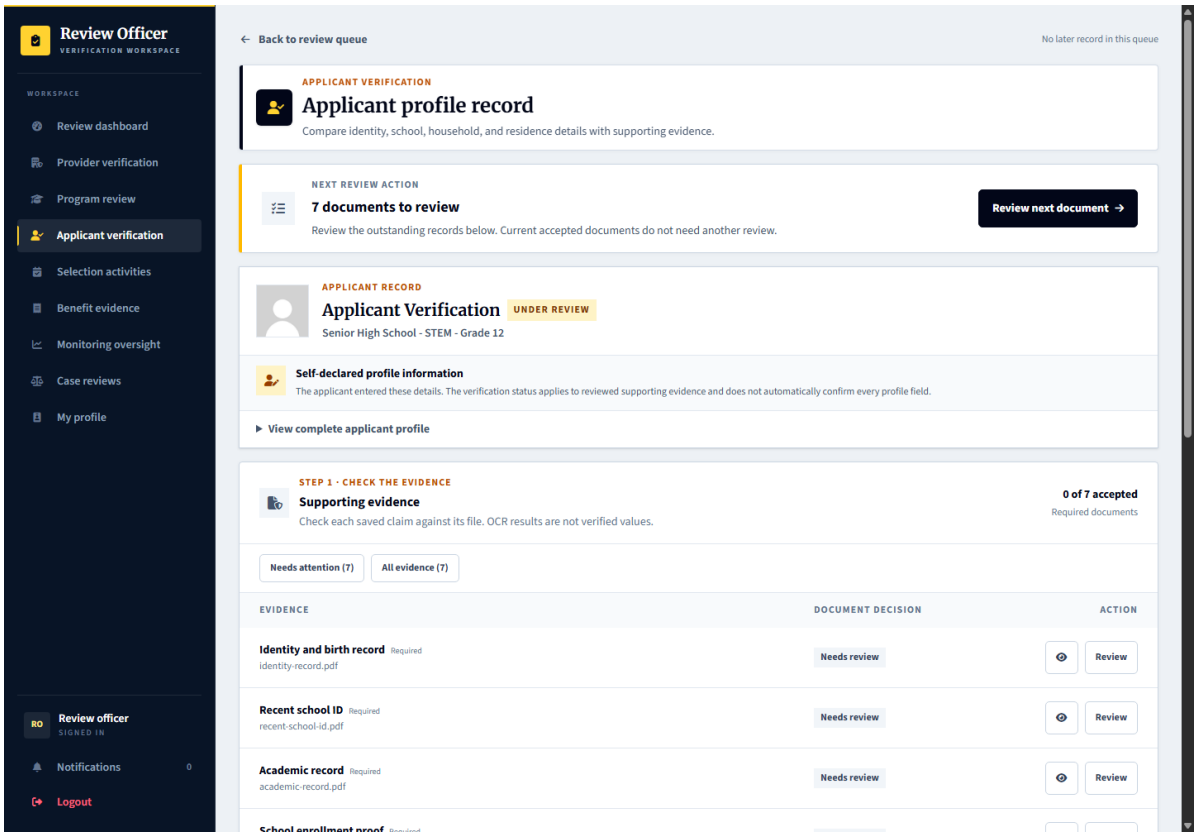

Signed in account: lumenops.reviews

1. Select Applicant Verification from Applicant verification. Confirm the name and account before reviewing.

2. Read the review guide for the current step. Expand the complete profile only when more context is needed, and check any changes since the previous decision.

3. Go to Supporting evidence and compare each required document with the corresponding declared information.

4. Uploaded files do not verify the whole profile. Review current evidence first; use the queue navigation to keep the original search and filters while opening the next record.

Current hosted view | lumenops.reviews | admin applicant review

Review an individual supporting document

Signed in account: lumenops.reviews

1. Select Review beside a submitted document to open this evidence-review dialog.

2. Inspect the file and related self-declared profile details. OCR is only a suggestion; use the larger preview if needed.

3. For an academic record, choose Accept document and confirm or correct the grading scale and verified result in Academic results. For an unreadable or unsuitable file, request a replacement and explain why.

4. Acknowledge the comparison, then accept the document to save the academic result and evidence decision together. This leaves overall profile verification pending.

Record overall profile verification

Signed in account: lumenops.reviews

1. Return to the applicant record after reviewing the individual files and photo.

2. At Step 2 Final profile decision, confirm that all current required evidence is accepted. Grades were already reviewed in Academic results; there are no grading controls here.

3. Choose Verify profile, Request profile correction, or Keep under review for the profile as a whole. Add the final review note; correction and reopening require an explanation.

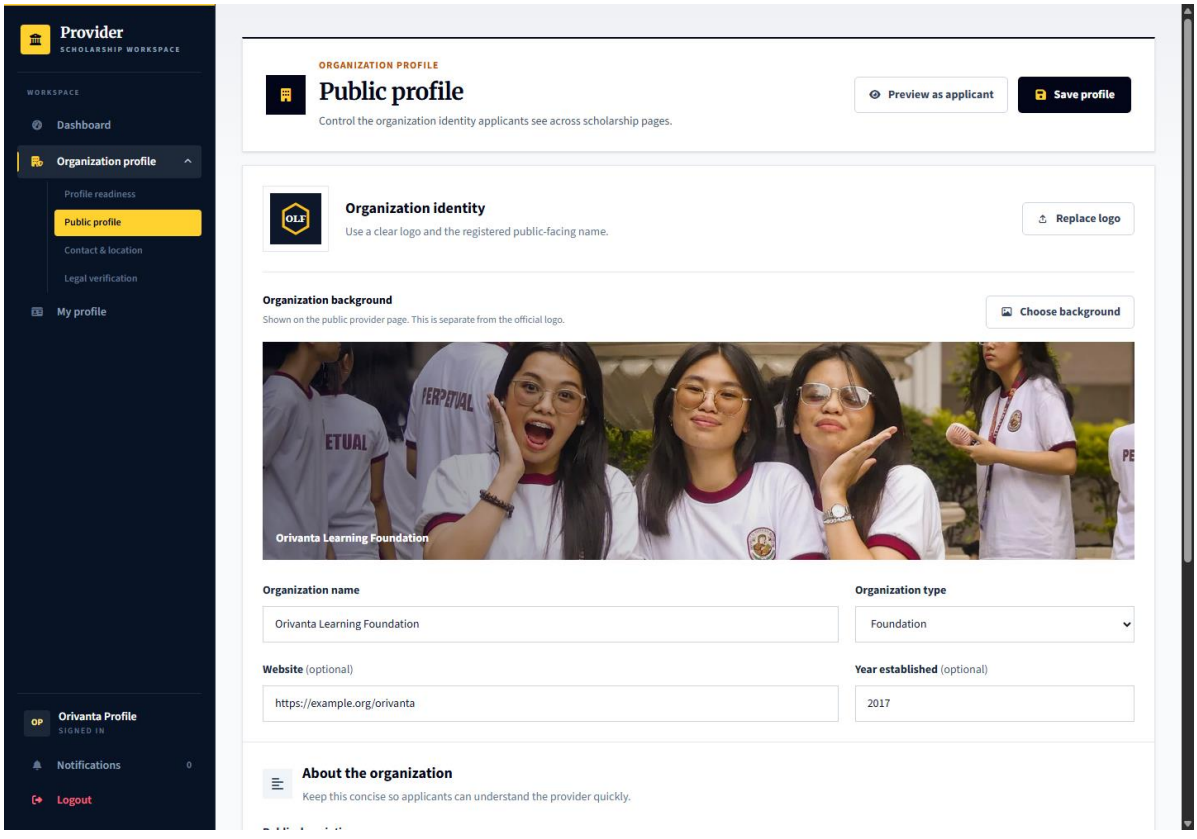

4. Save decision records only the overall profile outcome, not grades or a scholarship result. An outdated form is rejected if the record changed. Reload, compare the changes and review the current evidence before submitting again.

4 Provider organization profile

Signed in account: orivanta.profile

Page shown: Provider profile

The organization profile manager maintains the provider information shown to applicants, including identity, public description, branding, contact information, and location. A provider preview shows the applicant-facing presentation.

Current hosted view | orivanta.profile | provider profile

Applicant: discovers and evaluates providers. Provider: orivanta.profile maintains the organization record and evidence. Admin: lumenops.reviews checks registration evidence and organization verification.

5 Admin provider verification

Signed in account: lumenops.reviews

Page shown: Admin provider review

Use lumenops.reviews to inspect Orivanta Learning Foundation in Provider verification. Its current organization and supporting files are already approved so the operational demo can proceed. The screenshot shows this existing approved record, not an account awaiting a fresh approval. For a new or reopened review, inspect each current file before recording the separate final provider account decision. Verification is not scholarship publication.

Applicant: sees the provider trust state. Provider: sees individual file outcomes and corrective notes, and uses Replace document to submit new proof. Admin: records each document review and then a separate account outcome; the final account decision never overwrites file outcomes or notes.

Review organization documents individually

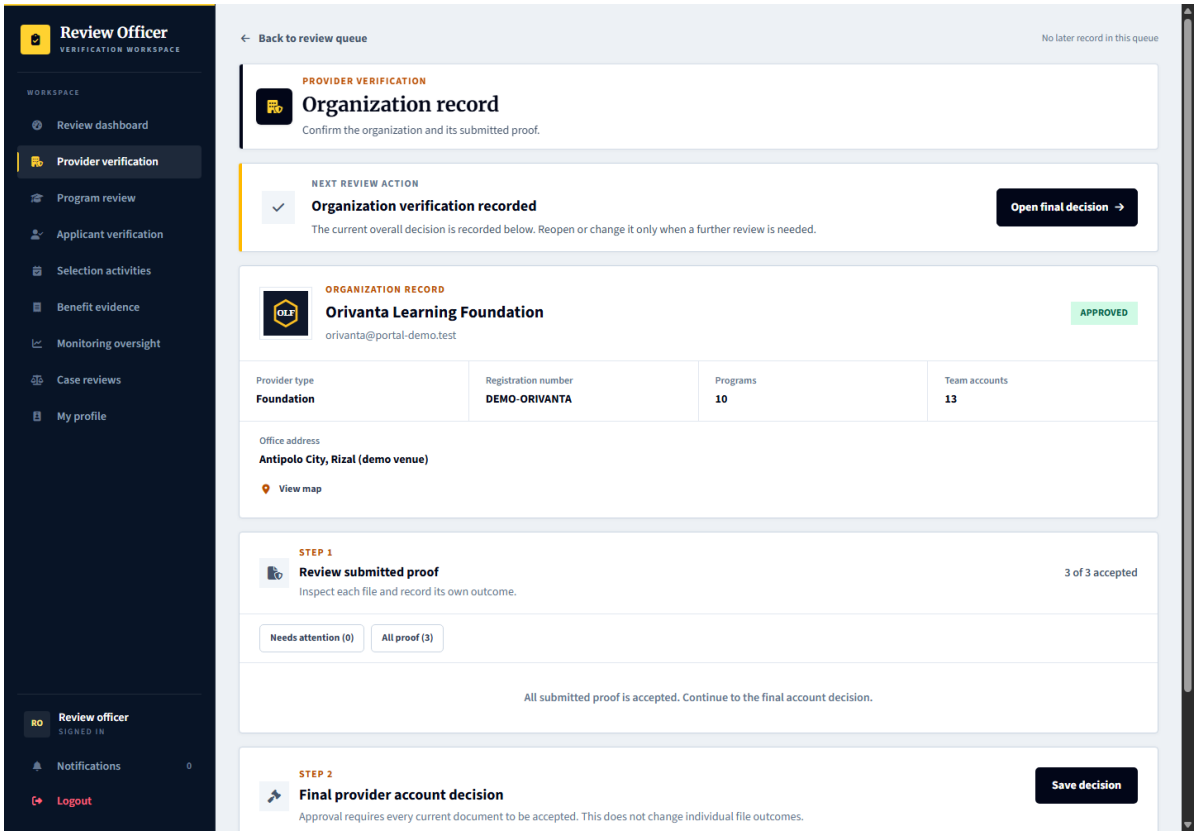

Signed in account: lumenops.reviews

1. Sign in as lumenops.reviews, open Provider verification and select Orivanta Learning Foundation. Read its saved approval and individual proof history. To demonstrate a fresh review, first deliberately reopen the appropriate review or replace evidence through its actual workflow; do this only after the operational demonstration if it would block provider access.

2. Choose Review on one file. Compare the submitted proof with the legal organization name, registration authority and number, and representative details. Download it if the format cannot be previewed.

3. Choose Accept document only after inspecting it and checking the comparison acknowledgement. Otherwise choose Request replacement and explain what must be corrected. Saving records the reviewer, time, note and file revision; it does not verify the account.

4. In a fresh review, repeat for each current file. Unreviewed, unavailable and replacement-requested evidence blocks approval. Reload if another reviewer or upload changes the record. Do not resave an existing approval merely to make a demonstration look complete.

Current hosted view | lumenops.reviews | admin provider review

Record the final provider account decision

Signed in account: lumenops.reviews

1. In Step 2 Final provider account decision, confirm all current proof has been individually accepted. Uploading documents alone is insufficient.

2. Choose Approve, Reject, or Return to pending. Rejection requires a clear organization review note. File outcomes and their notes remain independent.

3. Save decision only when appropriate. If the organization or document set changed, reload and inspect the current record before deciding.

4. The hosted provider is already approved. This section explains the review workflow without changing that status. Reopening verification or replacing required proof can affect operational access; finish the other provider demonstrations first. Scholarship publication and applicant selection remain separate decisions.

Replace organization proof after a review

Signed in account: orivanta.profile

1. Open Organization profile then Legal verification. Review the status and corrective note for the affected file.

2. Choose the Replace document icon on that row. The upload form identifies the file being replaced and selects its document type. Choose the new file and acknowledge the upload terms.

3. Upload proof replaces the old file with a new unreviewed record. The new file does not inherit acceptance. Other unchanged accepted files keep their own decisions.

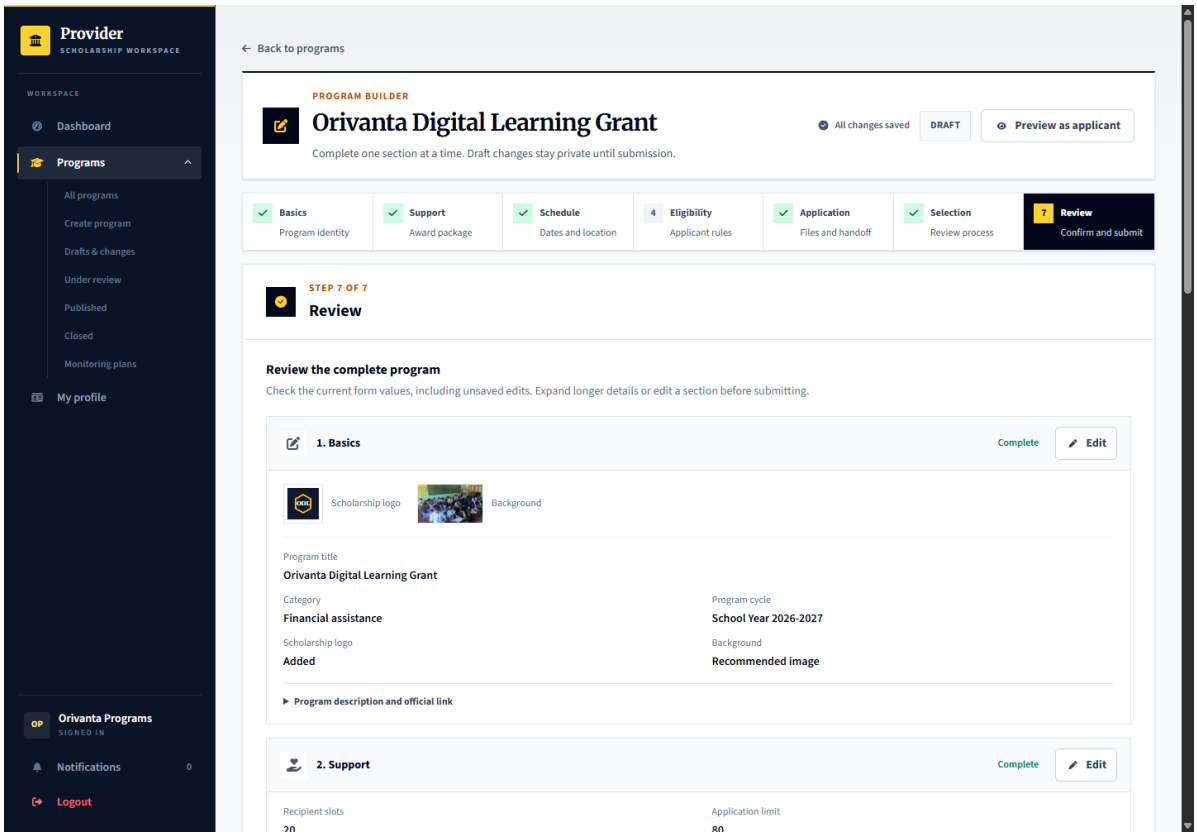

4. New proof or relevant legal identity changes return approved accounts to review. Relevant organization changes invalidate prior file comparisons; a reviewer must inspect the current details and files again.

6 Program creation and publication

Signed in account: orivanta.programs

Page shown: Provider program review

Use orivanta.programs with the draft Orivanta Digital Learning Grant. Complete Basics, Support, Schedule, Eligibility, Application and Selection, then inspect the actual values in Review. Saving a draft is private; submitting sends the program to admin publication review. Orivanta College Pathways Award is already awaiting that review.

Current hosted view | orivanta.programs | provider program review

Applicant: sees published scholarships, not private drafts. Provider: orivanta.programs prepares and submits programs. Admin: lumenops.reviews checks publication submissions; it does not make the provider final applicant selection.

Configure documents and the formal application handoff

Signed in account: orivanta.programs

1. Open a program, choose Edit, and open Application in the staged editor.

2. Configure the pre-screening files, optional files and post-qualification requirements appropriate to the program.

3. Set formal handoff instructions, deadline and the official link or physical venue with its map pin where needed.

4. Choose common document requirements from the selector and type only provider-specific requirements. Review the remaining steps before saving or submitting.

7 Admin program review

Signed in account: lumenops.reviews

Page shown: Admin program review

The program review queue separates publication checks from organization verification and applicant verification. The officer examines the program information and requests changes or records the publication review decision.

Applicant: can discover approved published programs. Provider: answers requested changes. Admin: verifies the submission through the program review workspace.

Inspect the submitted scholarship before publication

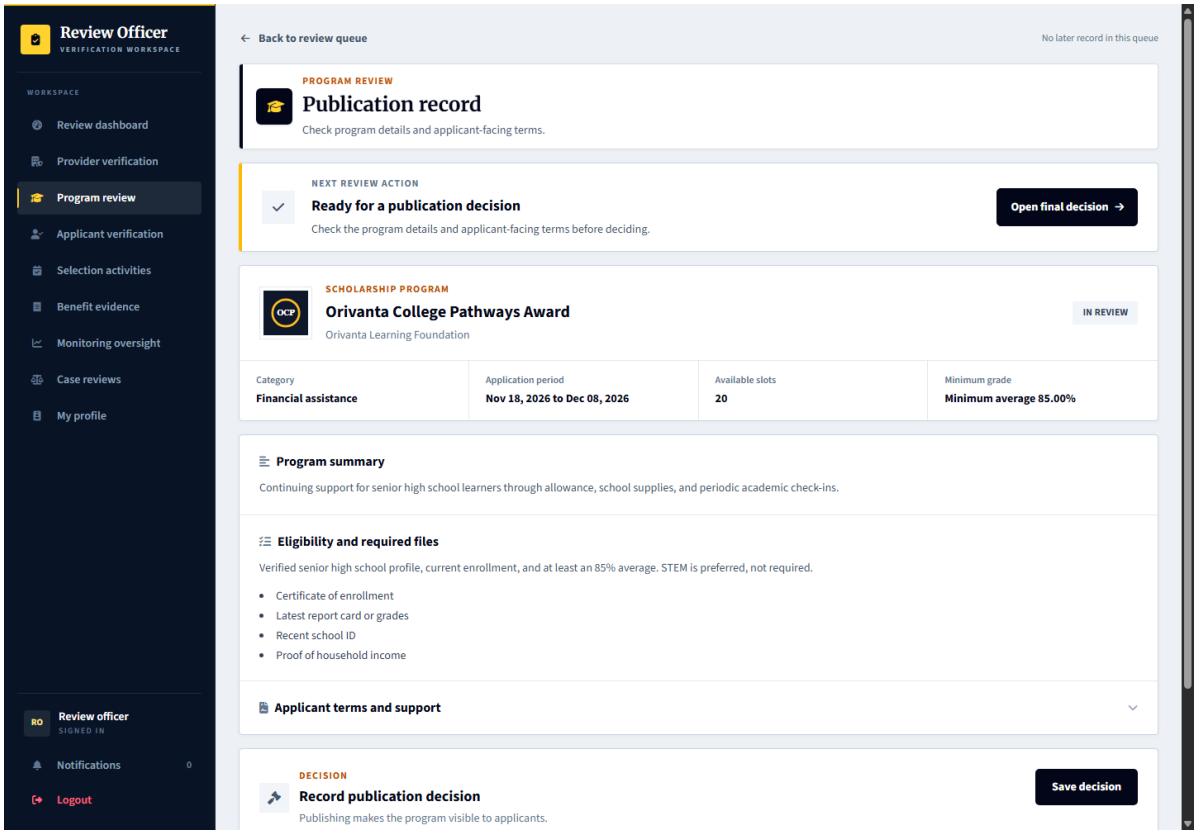

Signed in account: lumenops.reviews

1. Open a program from Program review and confirm its provider and submission status.

2. Review the advertised support, eligibility, requirements, dates, selection process and recipient terms.

3. Read the readiness checks and changes since the previous review, then approve a valid submission or request clear changes with a review note.

4. Save only after checking the current submission. If another user changed it, reload before deciding. Publication is separate from selecting a scholarship applicant.

Current hosted view | lumenops.reviews | admin program review

Define qualifications and the scoring plan

Signed in account: orivanta.programs

Use Orivanta Digital Learning Grant for program-builder changes. The six improvements preserve the existing workflow: save and leave protection, rule-based eligibility wording, guided options, organization-location reuse, clear DSS weights, and an actual-value final Review step.

1. In Eligibility, choose education levels and use the compact Add controls for courses, years and locations. Selected values stay inside their fields. Changing education levels warns before clearing known incompatible choices; resolve replacement choices and review retained custom entries before saving.

2. Keep mandatory rules separate from preferences. Use the rule-based eligibility summary or review a custom summary against the current rules. A change can invalidate that confirmation. In Schedule, Use organization location copies the address and pin into this program; a different venue requires confirmation and later manual address edits clear the old pin.

3. In Selection, inspect the actual DSS contribution of screening, exam and interview. Eligibility, document completeness and formal verification are qualifying checks, not additional competitive points. First application submission fixes the intake policy; do not change a scored intake to rewrite earlier applications.

4. In Review, inspect the actual title, branding, benefits, capacity, dates, venue, contact details, rules, file lists, stage order, scoring basis and recipient terms. Expand longer details and use the section Edit button to correct values. Review includes unsaved form changes; it is not the applicant preview of last saved data.

5. Save the draft or submit after resolving the existing readiness checks and accepting the provider declaration. Save status distinguishes unsaved, saving, saved and failed changes. The leave confirmation protects unsaved edits. Publication remains a separate admin decision; a completed section is not an approval.

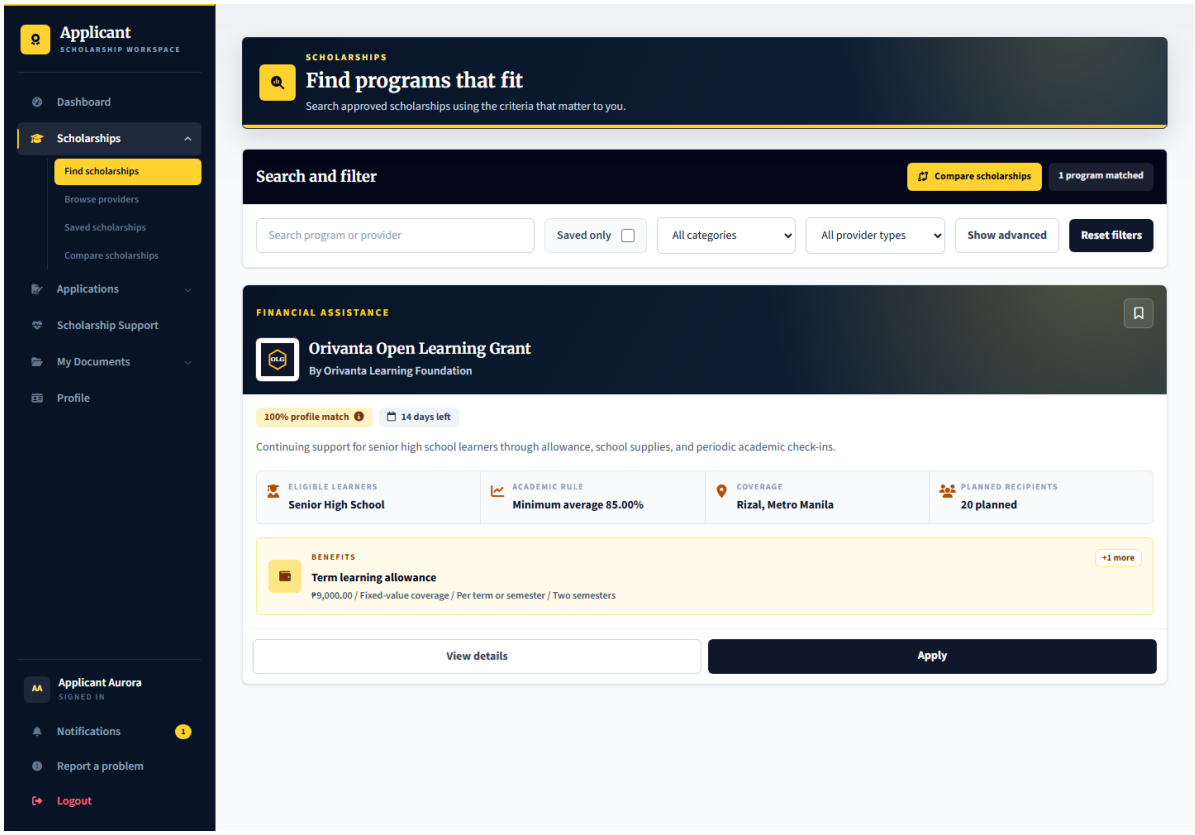

Expected result and handoff: The published program supplies clear rules and a stable evaluation basis. The admin reviewer checks publication readiness separately from applicant selection.

8 Scholarship discovery and preparation

Signed in account: learner.aurora

Page shown: Applicant scholarships

Use Search and filter to find published scholarships, then open View details to review benefits, eligibility, required files, deadlines and application instructions. Each result displays the scholarship logo beside its name; background photographs and provider logos are separate assets. Apply starts the application only when the verified profile meets the required rules and applications are open. Use the provider link to inspect the organization.

Current hosted view | learner.aurora | applicant scholarships

Applicant: learner.aurora is ready to start a new application. Provider: supplies accurate program and organization content. Admin: oversees publication and trust checks, not the applicant choice of scholarship.

Submit a new scholarship application

Signed in account: learner.aurora

Use the open Orivanta Open Learning Grant. The account already has a verified profile; completing an application is a new tester action.

1. Open Scholarships, select View details, then read How to apply, Eligibility, Requirements and the deadline. A suggested match percentage is preparation guidance, not approval.

2. Choose Apply. Review the current profile and eligibility checks. Use the eligibility link for details; do not proceed by entering a false value to satisfy a rule.

3. For a reviewable exception, follow the available explanation and evidence controls and wait for the relevant review when required. A hard unmet rule or an unverified profile cannot simply be ignored.

4. Choose current files from My Documents or upload the required files. These prepared programs have no short application questions. Accept the required declarations and terms before submission; the question feature remains available for other programs.

5. Review the complete application and confirm submission. Open Applications afterward and inspect the saved requirements, current stage and next-action guidance.

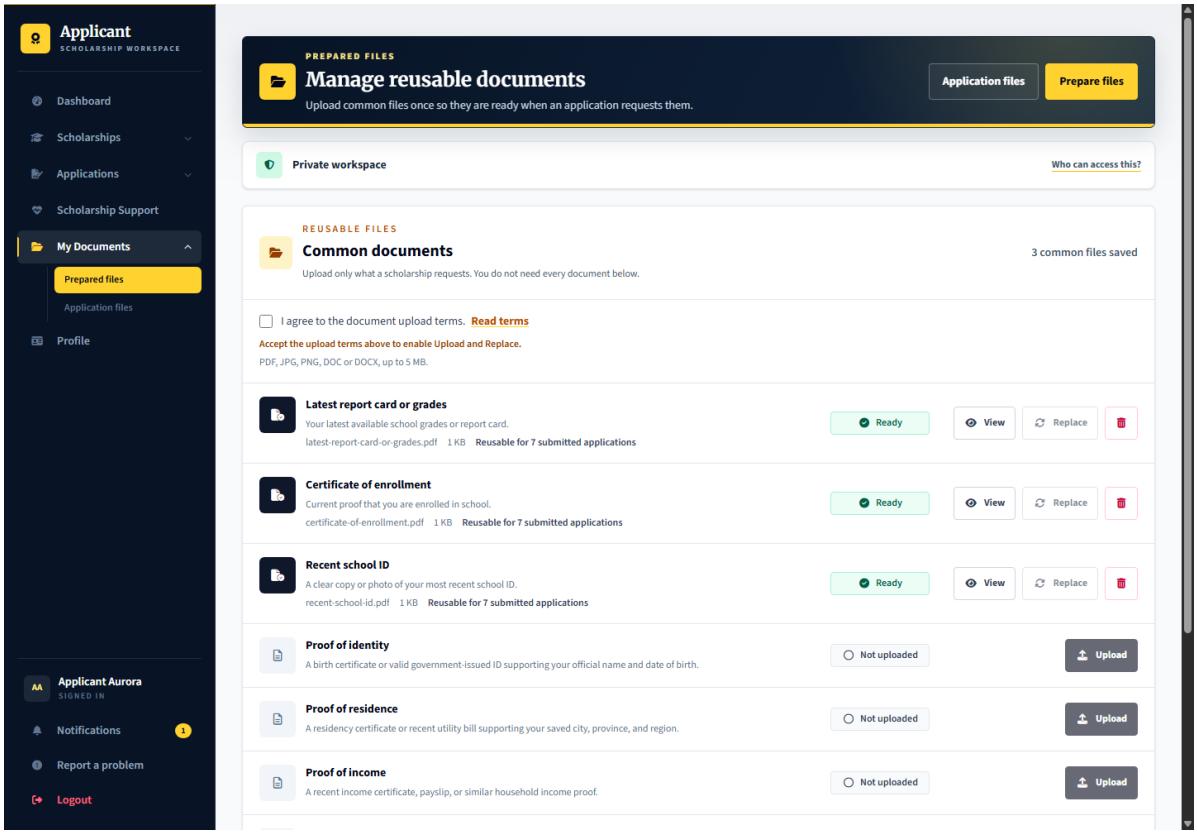

Expected result and handoff: A submitted application appears in the provider review queue. It is not yet screened, selected, accepted for support or paid.

9 Reusable applicant documents

Signed in account: learner.aurora

Page shown: Applicant documents

My Documents holds reusable files for future applications. A saved document is not automatically an accepted application requirement; the applicant must choose appropriate current files during an application.

Current hosted view | learner.aurora | applicant documents

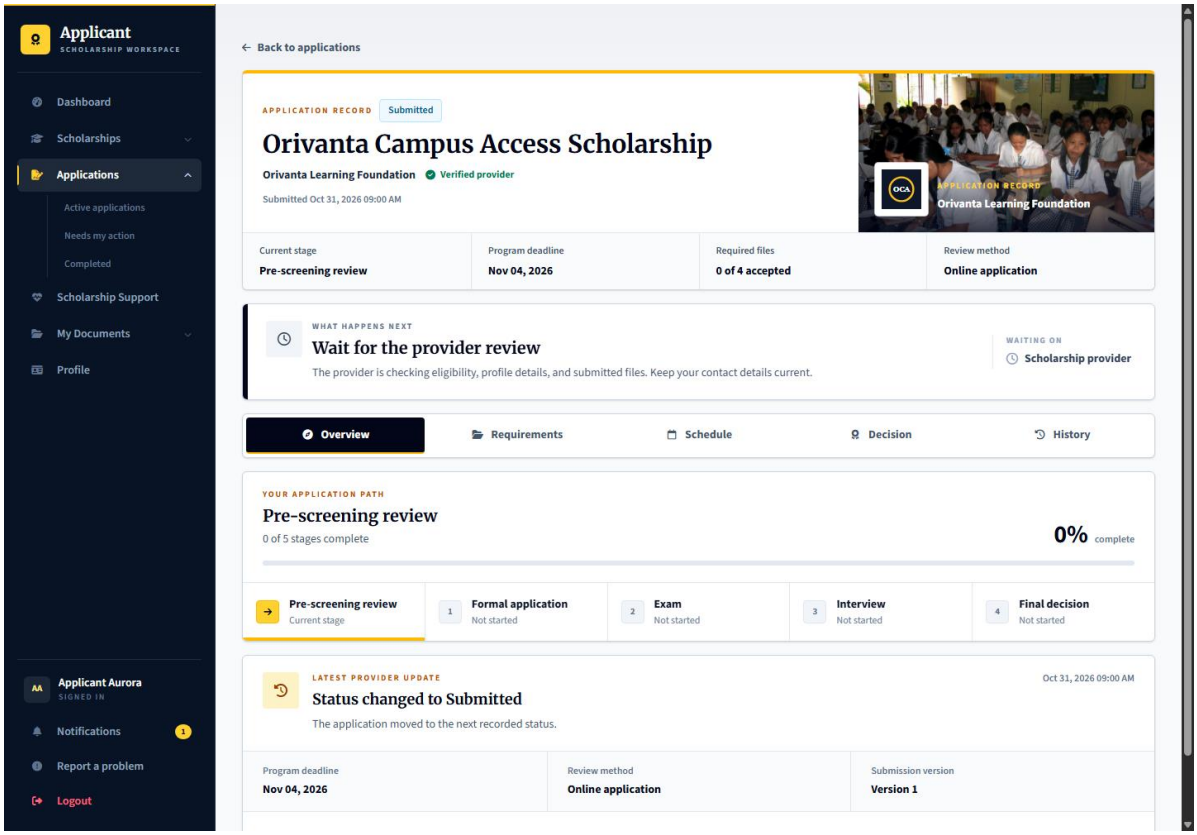

Applicant: uploads and manages documents. Provider: reviews files actually submitted to its program. Admin: profile evidence verification remains separate from a provider application document decision.

10 Submitted application and next action

Signed in account: learner.aurora

Page shown: Applicant application

The application details tell the applicant the current stage, what happens next, required submissions, schedule, decision, and history. learner.aurora is waiting for the initial provider review.

Current hosted view | learner.aurora | applicant application

Applicant: follows the next-action guidance and answers correction requests. Provider: orivanta.reviewer checks eligibility and submitted documents. Admin: handles platform verification or oversight, not routine scholarship screening.

11 Provider screening and document review

Signed in account: orivanta.reviewer

Page shown: Provider screening

The application reviewer works from the assigned queue instead of the manager overview. Review the applicant record, eligibility and document evidence before recording a screening result. Corrections should identify what the applicant must fix.

Applicant: learner.aurora is the prepared screening record. Provider: orivanta.reviewer performs the review. Admin: lumenops.reviews verifies profile evidence separately; passing screening does not itself award a scholarship.

Inspect application eligibility after selecting an applicant

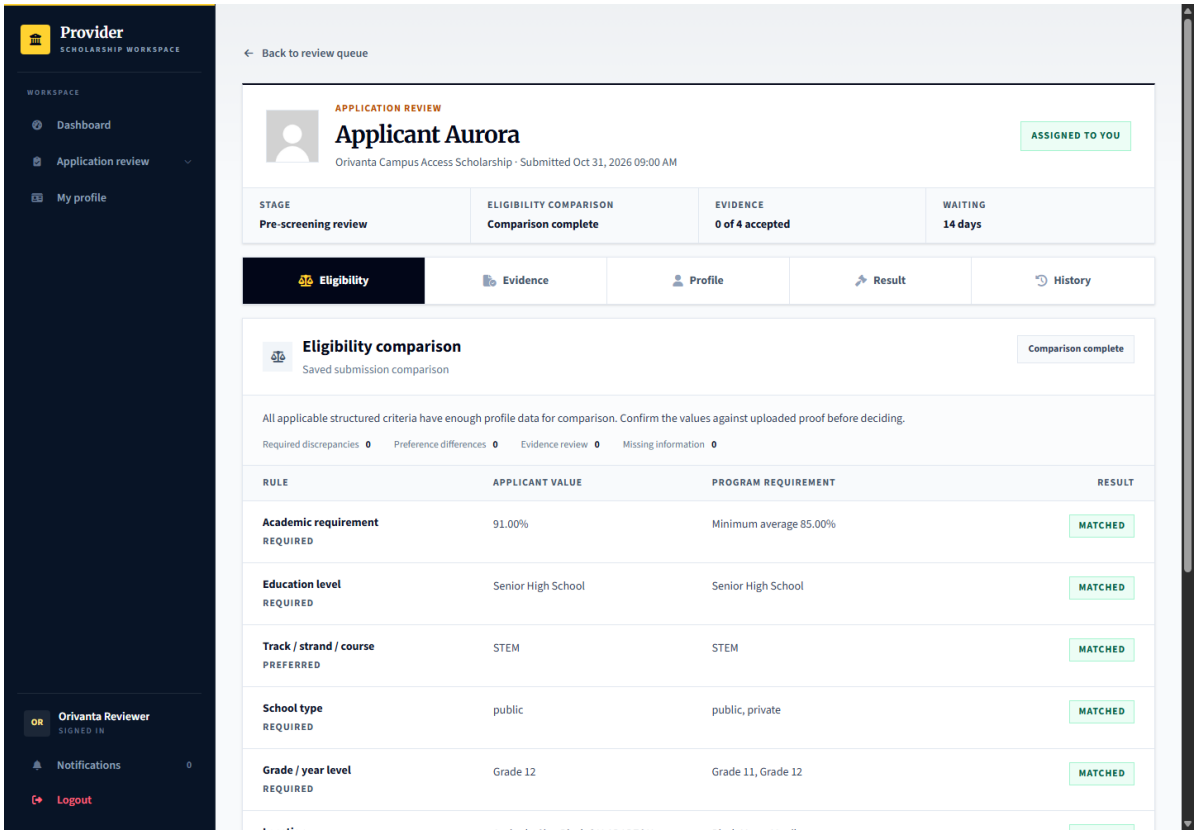

Signed in account: orivanta.reviewer

1. Open Applicant Aurora from My review queue and confirm that the application is assigned to you.

2. Compare the declared profile against each program rule. Review unresolved items rather than relying only on an overall score.

3. Inspect the Profile tab and supporting evidence where a claim needs checking.

4. Hard requirements and reviewable qualifications must follow their configured policy; resolve the relevant review before recording a screening result.

Current hosted view | orivanta.reviewer | provider screening

Review the application evidence

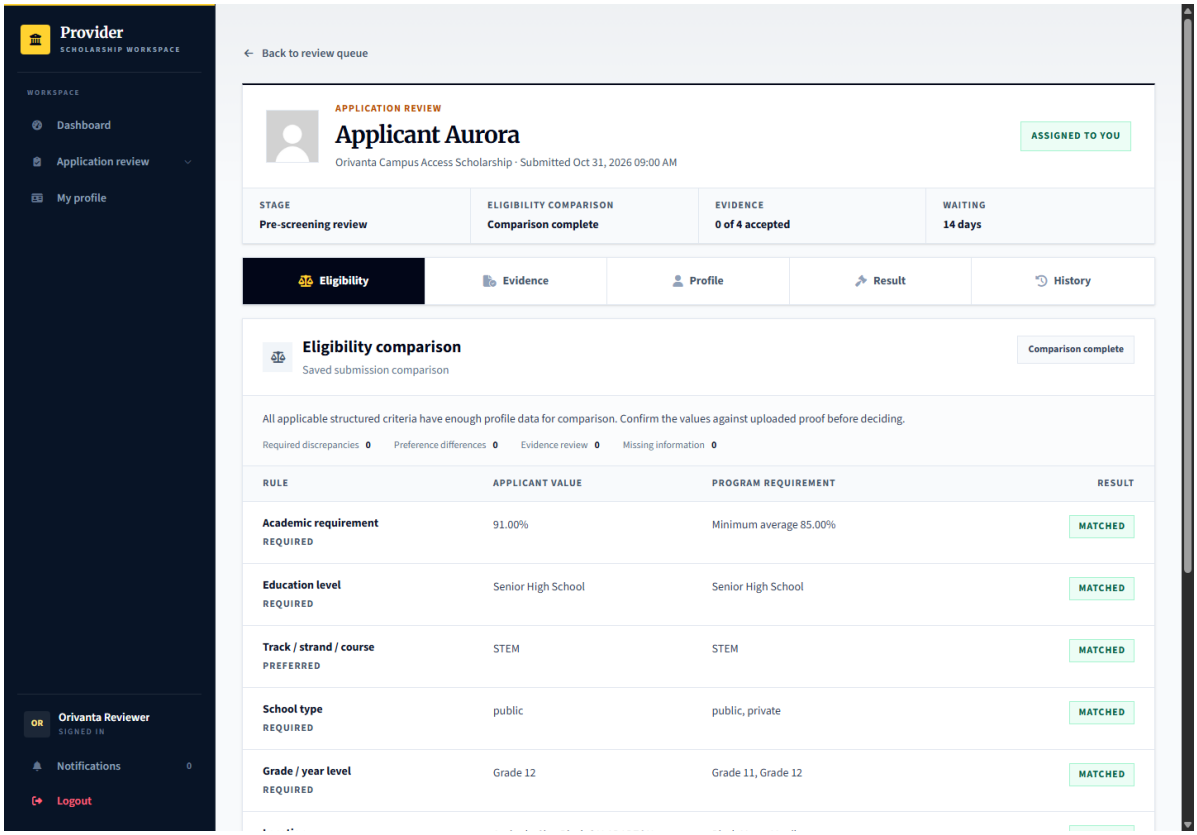

Signed in account: orivanta.reviewer

1. Open Evidence in the selected application record.

2. Use View or the file preview to inspect the submitted file, then select Review beside that document.

3. Record an evidence status and specific review notes appropriate to the file. An upload alone is not accepted evidence.

4. Repeat for the required files before relying on document readiness for the screening result.

Current hosted view | orivanta.reviewer | provider screening

Record the screening result or request correction

Signed in account: orivanta.reviewer

1. Open Result in the selected application record and check the readiness messages.

2. If information is missing, open Request correction and identify what the applicant must change.

3. Review the rubric, record its required scores and explanation, and choose the screening outcome. On a scored intake, the academic-merit and financial-need criteria supply the frozen screening component; eligibility checks and document acceptance still have their own safeguards.

4. Save the appropriate review or result only after completing its prerequisites. Claiming an unassigned application is a separate access action.

Return a correction to the provider reviewer

Signed in account: learner.aurora then orivanta.reviewer

Use this branch only after the reviewer requests a specific correction. The request and each saved response remain part of the review history.

1. As the applicant, open the application next action or Requirements section and read the correction note and response deadline.

2. Replace only the requested files or correct the permitted information. Profile changes that invalidate platform evidence may need renewed profile verification.

3. Review the corrected submission, acknowledge its terms where required and confirm Send update. A replacement does not inherit the prior file acceptance.

4. As orivanta.reviewer, open the returned record from the review queue, inspect the changes and current evidence, then record the review or result.

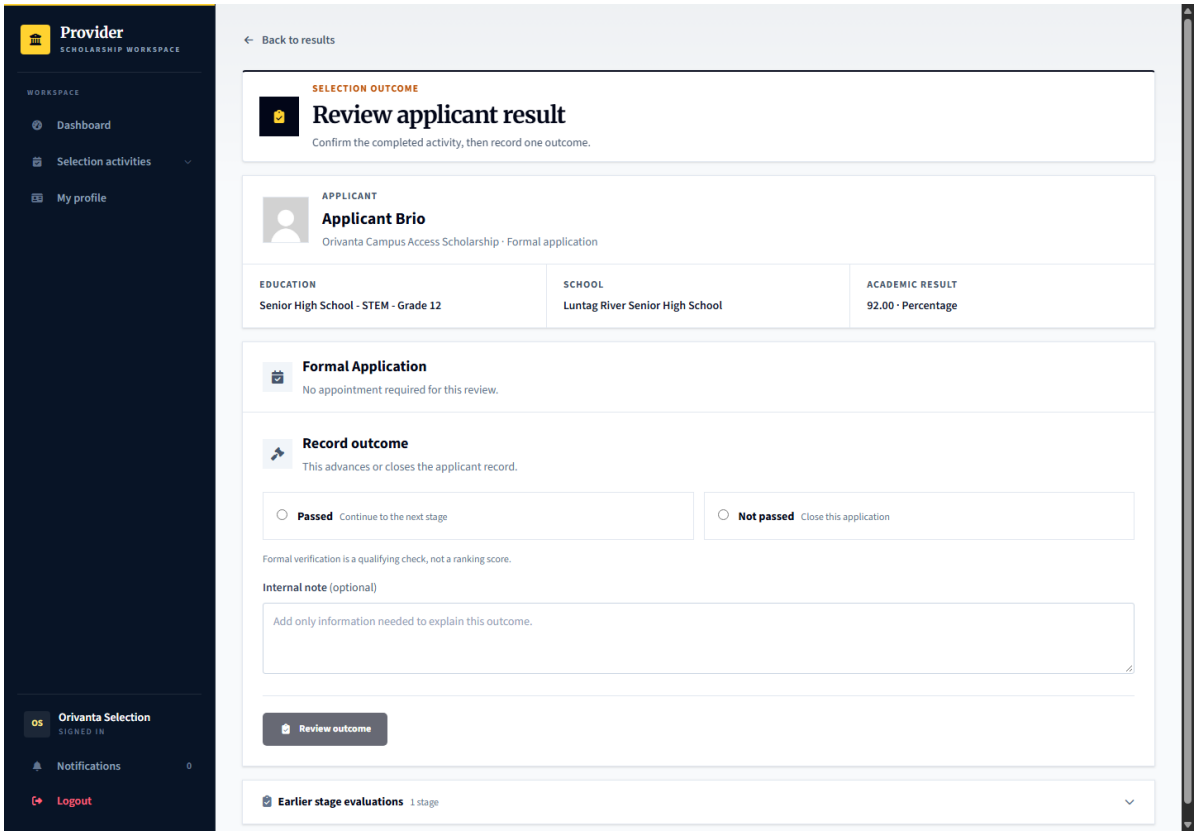

Expected result and handoff: The corrected application returns to review. A correction response does not pass the stage automatically.

12 Formal application verification

Signed in account: orivanta.selection

Page shown: Provider formal

Formal application is a configured stage for providers that require a further official application or in-person verification. Applicants follow the published instructions and schedule where applicable. A separate session is not always mandatory for this stage.

Current hosted view | orivanta.selection | provider formal

Applicant: learner.brio follows the formal instructions. Provider: orivanta.selection records the verification, required proof and result according to the configured stage. Admin: can inspect selection activity evidence through oversight.

Record the formal application verification

Signed in account: orivanta.selection

1. Select Applicant Brio from the formal-application work queue.

2. Read the published handoff instructions and verify the actual formal application requirements or originals.

3. Record the formal verification or required activity details and attach provider proof where the configured stage requires it. Checking the originals and recording the applicant outcome are separate actions.

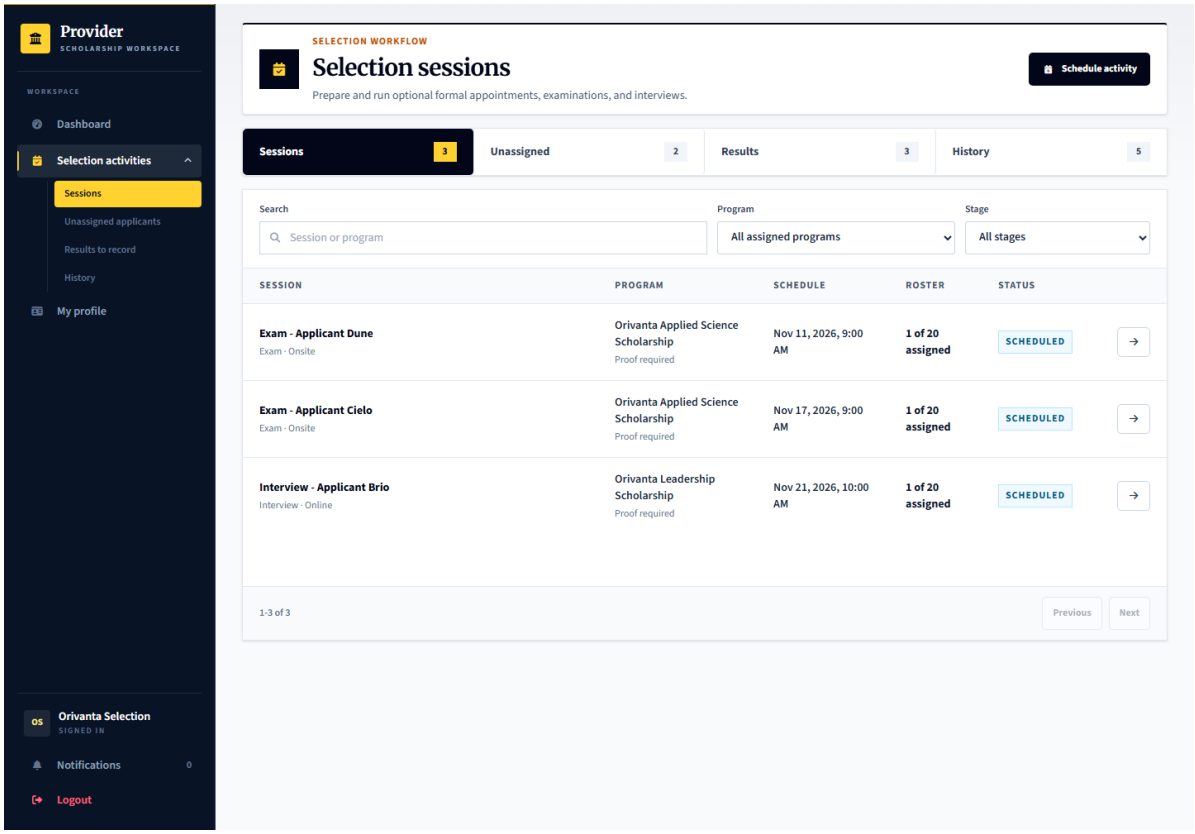

4. Record the stage outcome after the prerequisites are satisfied; a published instruction is not proof that verification happened.

13 Examination and interview scheduling

Signed in account: orivanta.selection

Page shown: Provider sessions

The selection officer assigns eligible applicants to sessions. Separate sessions support different dates or venues, while online interviews use a meeting link. For the Applied Science Scholarship use learner.brio for assignment, learner.cielo for exam acknowledgment and learner.dune for session completion. Session attendance and an individual result are separate records.

Current hosted view | orivanta.selection | provider sessions

Applicant: learner.brio or learner.cielo awaits assignment. Provider: orivanta.selection manages sessions and outcomes. Admin: lumenops.reviews can inspect selection activity records and evidence.

Create assign and complete a selection session

Signed in account: orivanta.selection

Use Applicant Brio for exam assignment, Applicant Cielo for interview assignment, or Applicant Dune for a conducted exam awaiting completion. They are different prepared starting points, not one person already at every step.

1. Open the relevant closed-intake program and selection workspace. Create a session using its form or modal. Choose the stage, date, start and end times, capacity and instructions.

2. For an onsite activity, enter the venue and selectable map pin. For an online interview, choose Online and provide the meeting link. Use separate sessions for different venues, dates or groups.

3. Assign only applicants who have reached the correct stage. Publish the session and check the roster. Applicants read or acknowledge their own assignments; capacity and program scope still apply.

4. After the activity actually occurs, record attendance for each assigned applicant and upload the required provider proof for that session or person.

5. Use the session completion control once its checks are satisfied. Then open each applicant result separately and record the actual assessment score and outcome.

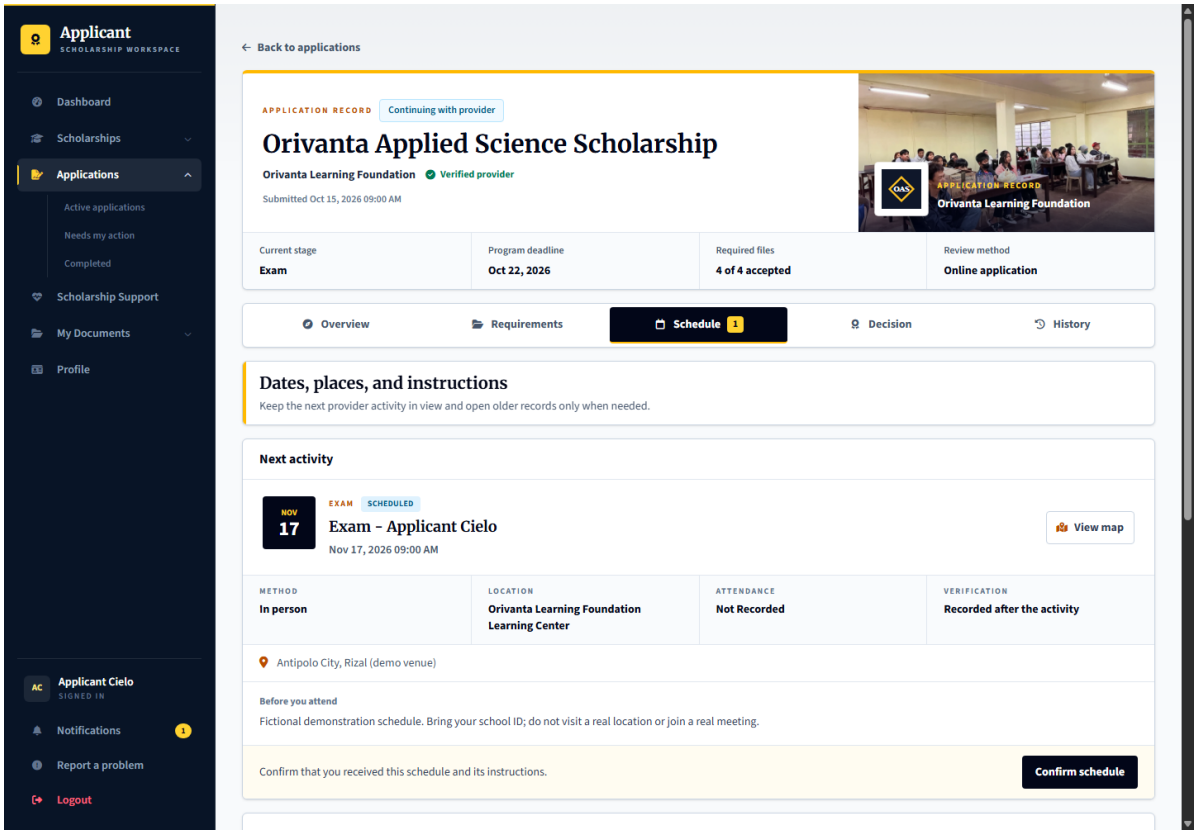

Expected result and handoff: A completed schedule with attendance and proof enables result recording where required. It does not automatically pass everyone or issue a scholarship offer.

14 Applicant examination schedule

Signed in account: learner.cielo

Page shown: Applicant exam

The applicant reads the assigned examination date, venue, instructions, and acknowledgement action. Other prepared accounts cover completing the conducted session and recording an individual examination result.

Current hosted view | learner.cielo | applicant exam

Applicant: learner.cielo acknowledges the schedule. Provider: learner.dune is the session-completion scenario and learner.aurora awaits a result, both acted on by orivanta.selection. Admin: provides oversight rather than taking the examination decision.

Record the conducted examination result

Signed in account: orivanta.selection

1. Open Applicant Aurora in the results queue and inspect the assigned examination and readiness checks.

2. Check attendance or participation and the required completion evidence for the conducted session.

3. In a scored intake, enter the actual examination score and maximum score with the passing outcome, then review the confirmation. Older unscored applications can retain their original result without invented assessment points.

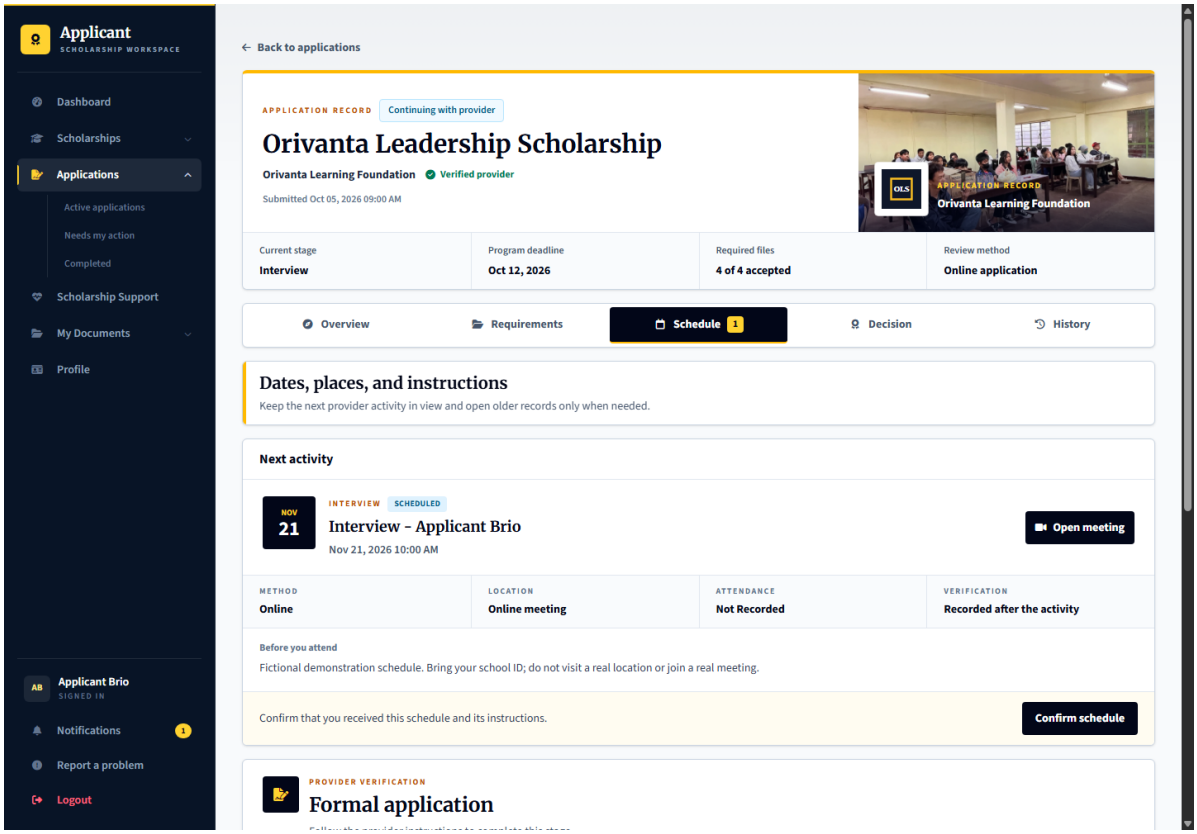

4. Session completion and an individual applicant result are separate actions; do not pass an applicant simply because the schedule exists.

15 Applicant interview schedule

Signed in account: learner.brio

Page shown: Applicant interview

The interview schedule tells the applicant when and how to attend, including the meeting link for an online interview. An applicant acknowledgement does not prove the interview took place.

Current hosted view | learner.brio | applicant interview

Applicant: learner.brio acknowledges its schedule. Provider: orivanta.selection records attendance, stage proof and the interview result; learner.aurora is ready for that result. Admin: can inspect supporting activity records.

Record the interview result

Signed in account: orivanta.selection

1. Open Applicant Aurora from the interview results queue.

2. Check that the interview actually occurred and review participation, stage proof and any recorded interview notes.

3. Record the interview assessment score and maximum when the frozen scoring policy requires them, together with the stage outcome. Do not substitute an attendance status for a numeric evaluation.

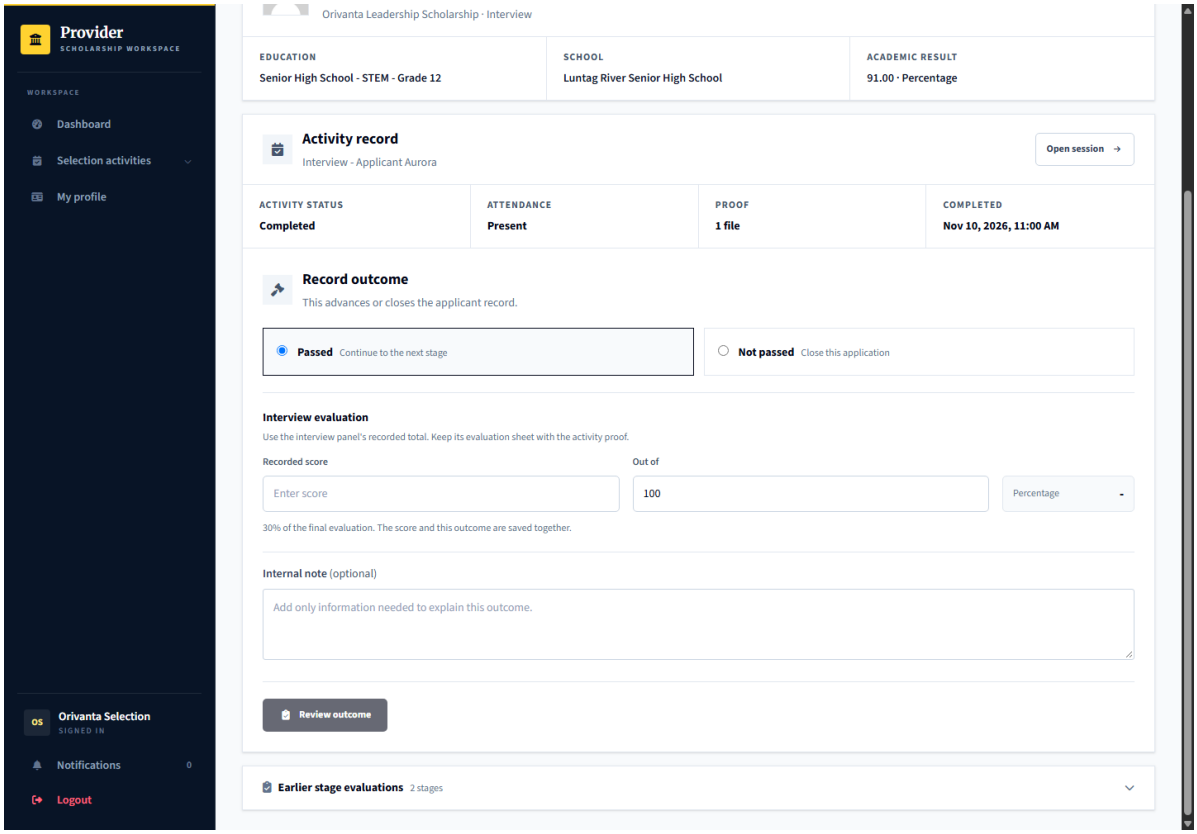

4. An online meeting link or applicant acknowledgement is a schedule instruction, not evidence that the interview was completed.

16 Recording conducted stage results

Signed in account: orivanta.selection

Page shown: Provider interview result

The results workspace separates work ready for result recording from scheduling work. Complete the required conducted-session or stage verification and attach proof where required before recording an applicant result.

Current hosted view | orivanta.selection | provider interview result

Applicant: sees the recorded result and next stage. Provider: records the evidence-based result and any permitted audited correction, rather than merely marking every applicant complete. Admin: oversight does not replace the provider stage result.

17 Final scholarship decision

Signed in account: orivanta.decisions

Page shown: Decision comparison

The decision officer compares fully evaluated applicants within the same scholarship against its remaining slots. The DSS combines the frozen screening, exam and interview evaluations and suggests selection or waitlisting. It never makes the award decision. Earlier exam or interview success alone is not a scholarship award.

Orivanta Academic Merit Scholarship has four current candidates and two slots. learner.aurora, learner.brio and learner.cielo have complete evaluations. learner.dune has a completed interview with its numeric evaluation still missing. The comparison therefore starts provisional. Demonstrate entering the missing evaluation before relying on selection or waitlist suggestions.

Open the final decision form

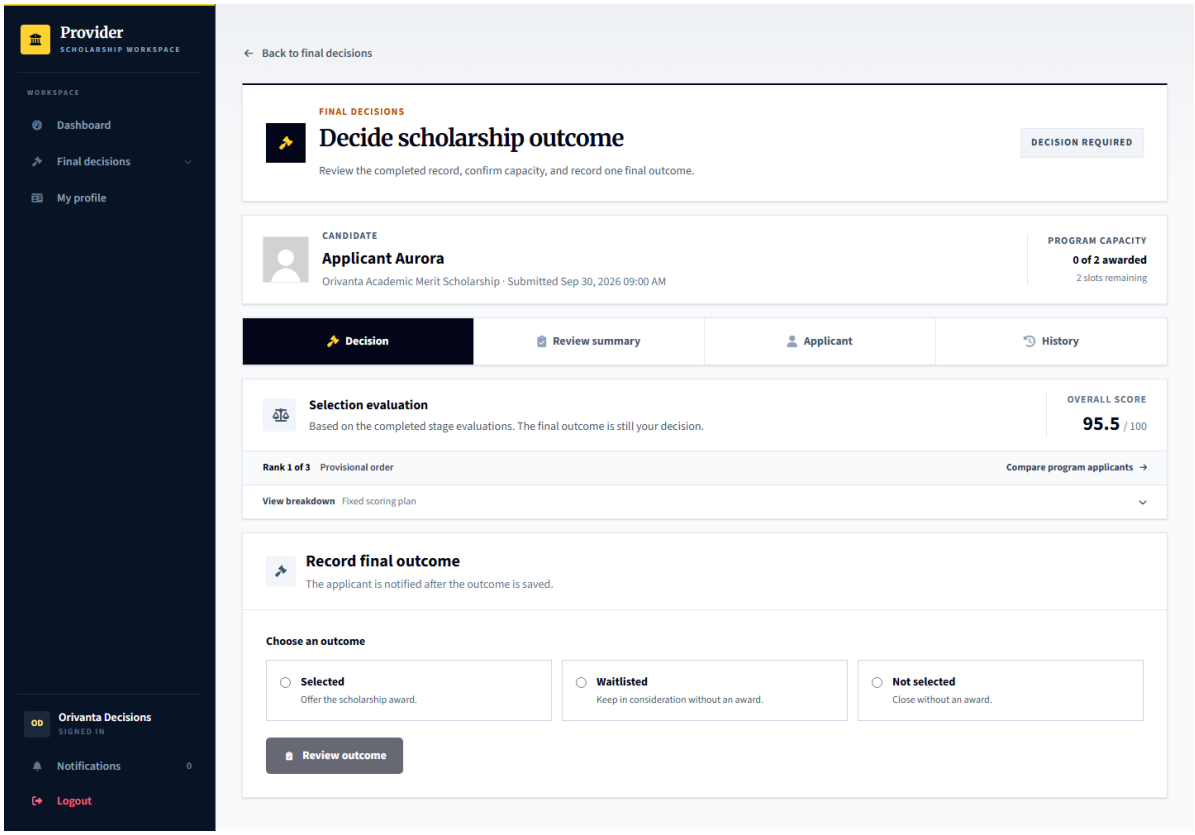

Signed in account: orivanta.decisions

1. As orivanta.decisions, open Pending decisions, choose Orivanta Academic Merit Scholarship and open Applicant Aurora. Read the saved evaluations, capacity and provisional comparison reason. Applicant Dune is in this same intake, not a second scoring scholarship.

2. The current three totals are 95.5, 90.6 and 85.0; Dune has no final score. Because a pending evaluation is missing, do not describe the comparison as Ready to compare. Complete the missing assessment in the selection workspace, then reload and use the actual revised cohort order.

3. In Record final outcome, choose the actual decision and add the required notes or internal rationale. A different suggestion or a cutoff tie can require an explanation. A waitlist suggestion is not an official waitlist entry until saved.

4. Review the confirmation and save only the intended outcome. If another decision or score changed, reload the comparison. Selection reserves capacity and sends the offer; it does not accept the agreement for the applicant or release money.

Current hosted view | orivanta.decisions | decision record

Compare final candidates using the DSS

Signed in account: orivanta.decisions

Choose Orivanta Academic Merit Scholarship. Applicant Aurora, Applicant Brio and Applicant Cielo have completed scores; Applicant Dune still needs an interview evaluation. All four final outcomes remain unsaved, and two award slots are available.

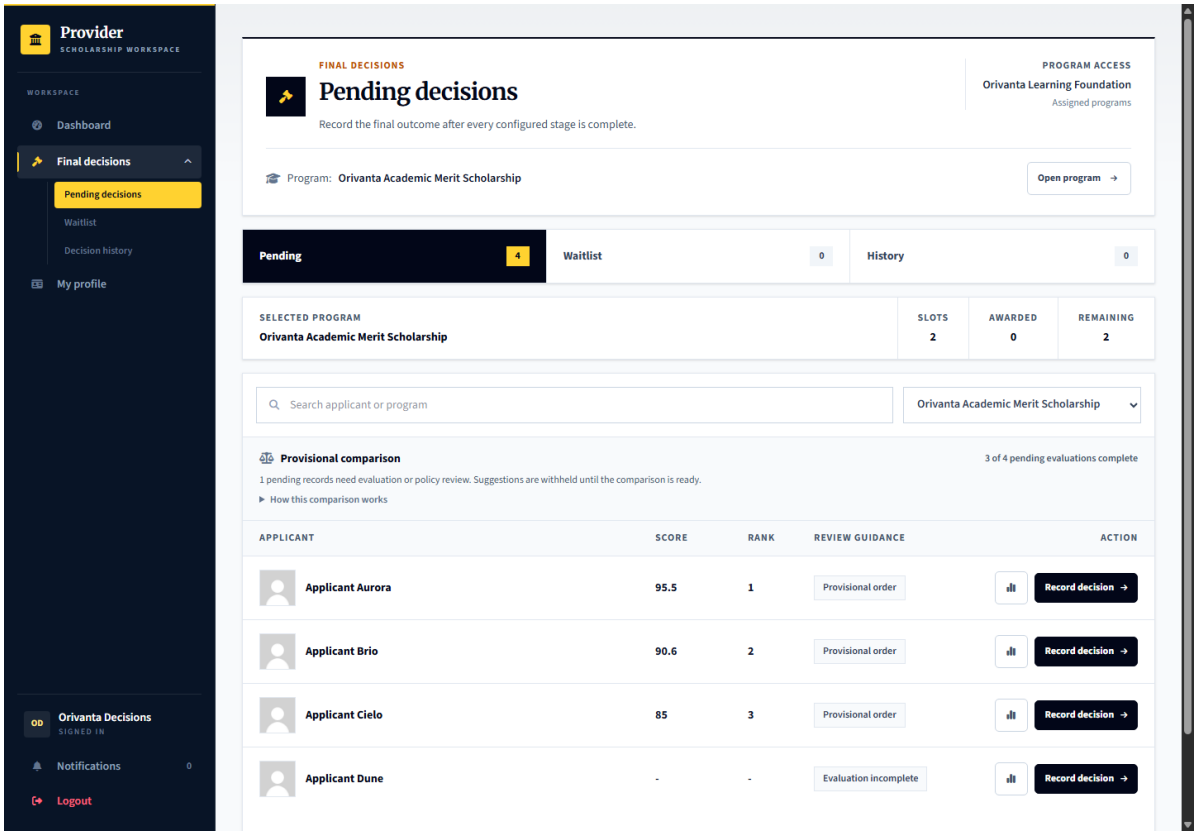

1. Begin with the provisional comparison and its explanation. Follow Complete a missing evaluation before ranking for learner.dune. After the selection officer saves that genuine evaluation, reload this program and check that the comparison has become ready.

2. Inspect the actual four-candidate scores, ranks, ties and two remaining slots. Dune enters the order using the score the tester records, so do not assume the first two prepared rows will remain the highest. Suggestions are advisory and are not official outcomes.

3. Open the small evaluation-breakdown icon. Compare frozen screening, examination and interview components and their weights. These are recorded evaluations, not the applicant matching percentage.

4. Open Record decision for the intended candidate. Follow the result controls and confirmation. Enter a clear internal reason if departing from guidance or resolving a cutoff tie.

5. Return to Pending decisions after saving. Capacity and suggestions update. Equal scores can share a rank; an unresolved tie at the cutoff must not be arbitrarily treated as an automatic winner.

Current hosted view | orivanta.decisions | decision comparison

Expected result and handoff: The officer owns the official outcome. Selecting creates an offer, waitlisting creates the official queue, and an unsaved suggestion changes neither.

Read the scored stage breakdown

Signed in account: orivanta.decisions

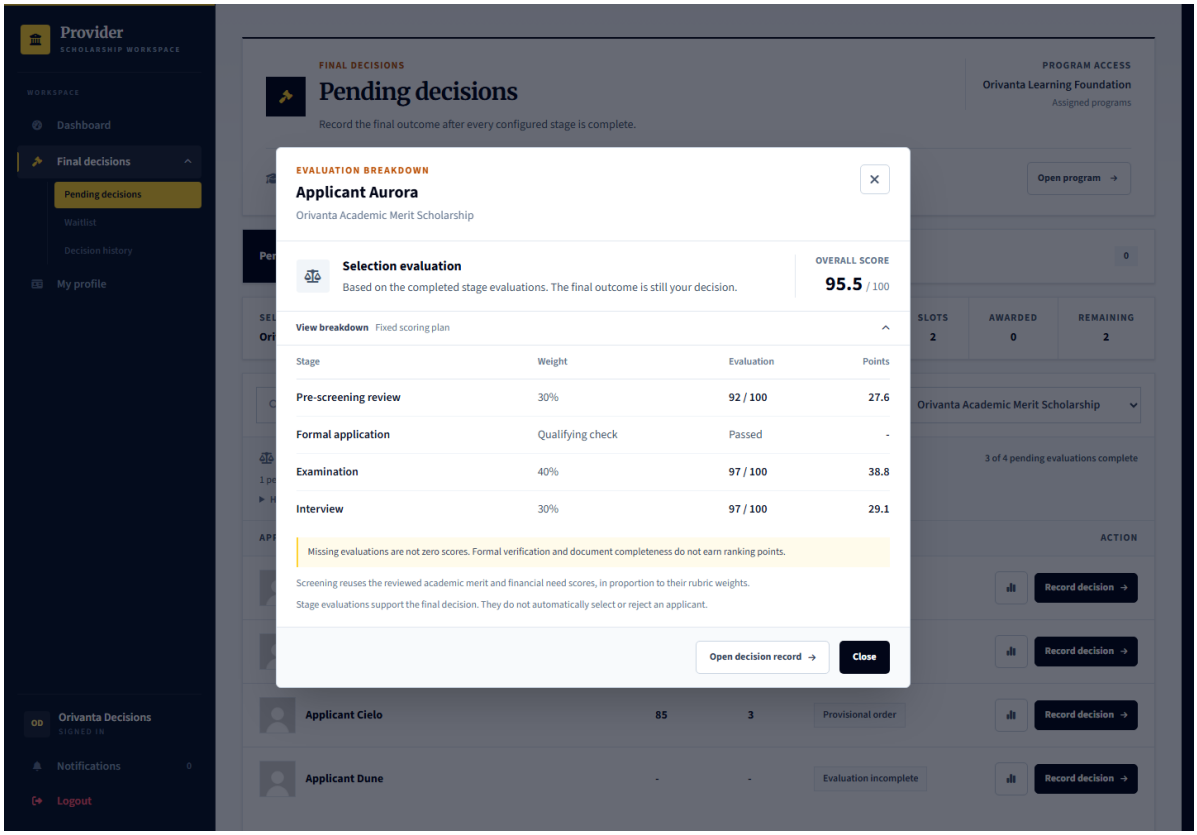

The example uses screening 30 percent, examination 40 percent and interview 30 percent. Other configured stage combinations use their own frozen preset.

1. Open the evaluation-breakdown icon for Applicant Aurora.

2. Read the stage status, score, maximum and weight. Screening reuses the reviewed academic-merit and financial-need rubric components.

3. Treat formal verification as a prerequisite. It is not counted twice as additional points.

4. If a stage is incomplete or its result was reopened, review it through the responsible workspace before relying on the final total.

Current hosted view | orivanta.decisions | decision breakdown

Complete a missing evaluation before ranking

Signed in account: orivanta.selection

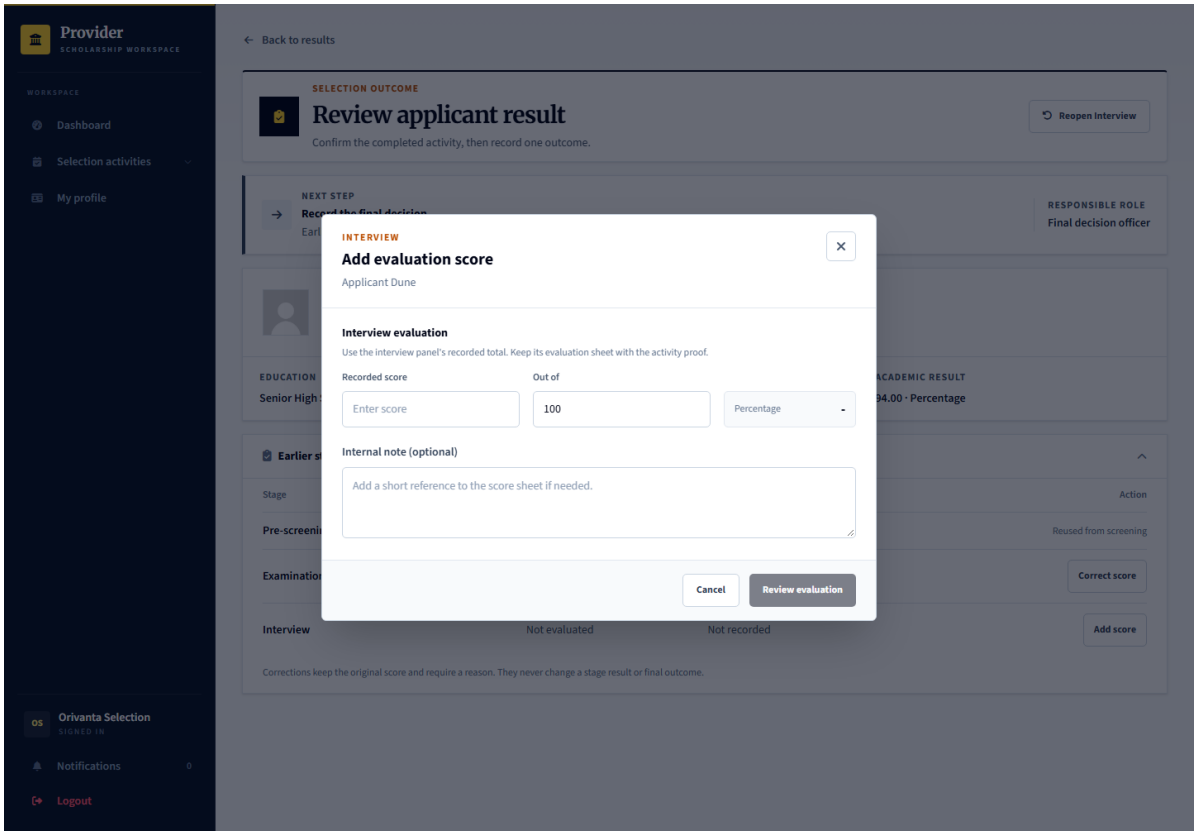

Use Applicant Dune, learner.dune, in Orivanta Academic Merit Scholarship. Its interview has attendance, provider proof and a passed result, but no numeric evaluation. This deliberately holds the comparison provisional until the tester records the real score.

1. As orivanta.selection, open the completed interview through selection history, then the assigned applicant record. Confirm participation and the original assessment evidence.

2. Expand Earlier stage evaluations in the applicant record. Beside Interview, choose Add score and enter the actual score and maximum. Add a factual note and review the confirmation before recording it.

3. To correct an existing evaluation later, use the correction control and give the required explanation. Earlier score revisions stay in history.

4. As orivanta.decisions, select this program in Pending decisions. A final score appears only after all scored and qualifying prerequisites are complete. Missing does not mean zero.

Current hosted view | orivanta.selection | selection score dialog

Expected result and handoff: The comparison uses the latest valid recorded evaluation. Completing a score still leaves the final scholarship outcome to the decision officer.

18 Applicant acceptance of the agreement

Signed in account: learner.aurora

Page shown: Applicant agreement

The selected applicant reviews the actual recipient terms before accepting or declining. Acceptance creates a clear record of the obligations the applicant agreed to; later program edits must not silently replace those accepted terms.

Applicant: learner.aurora is awaiting its agreement response. Provider: orivanta.recipients tracks agreement responses. Admin: independent review later uses the accepted source, not an unrelated current program rule.

Read and respond to the recipient agreement

Signed in account: learner.aurora

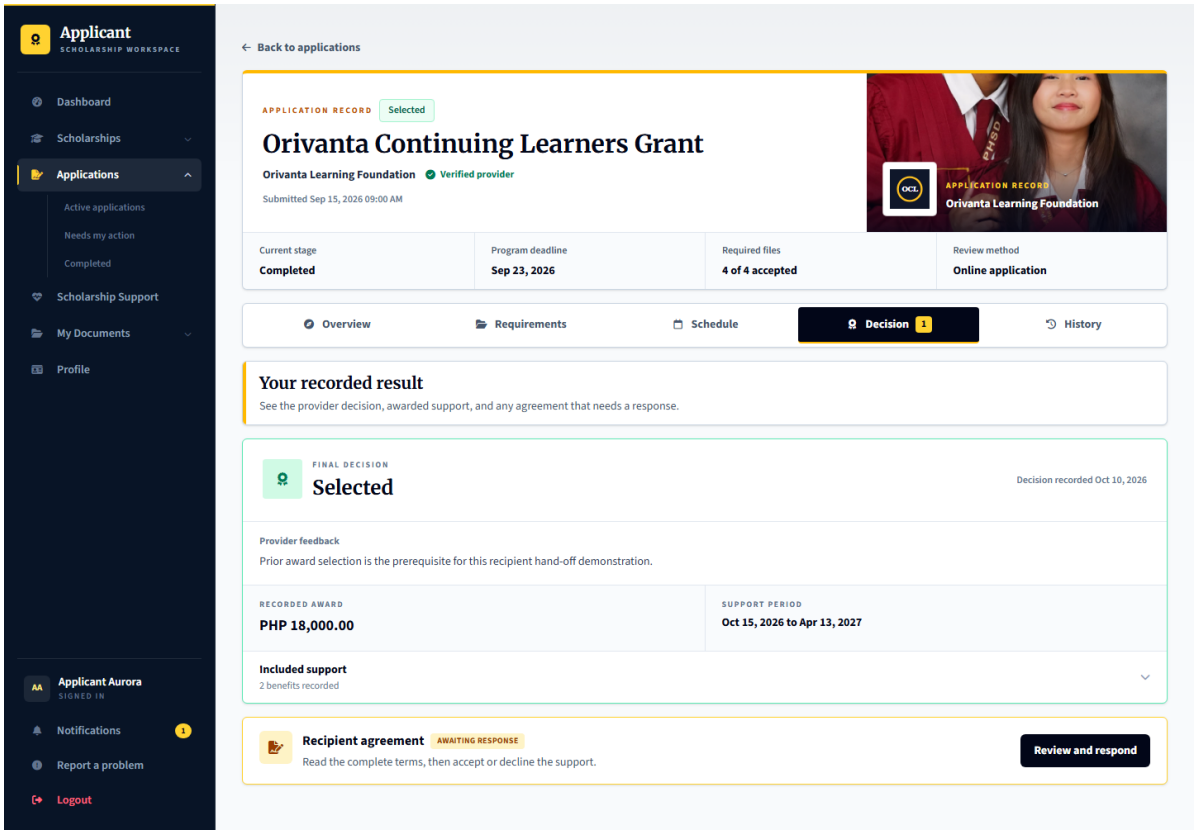

1. Open the selected application and choose Review agreement.

2. Read the actual recipient terms, responsibilities and any stated consequences rather than accepting from the summary alone.

3. Use the acceptance acknowledgement and response note where required, then choose the intended response.

4. Only submit after understanding the agreement. The provider must wait for the applicant response before the corresponding support steps.

5. If the agreement is already accepted, View agreement shows the saved terms. Use a still-pending offer to demonstrate acceptance; do not reset an existing response.

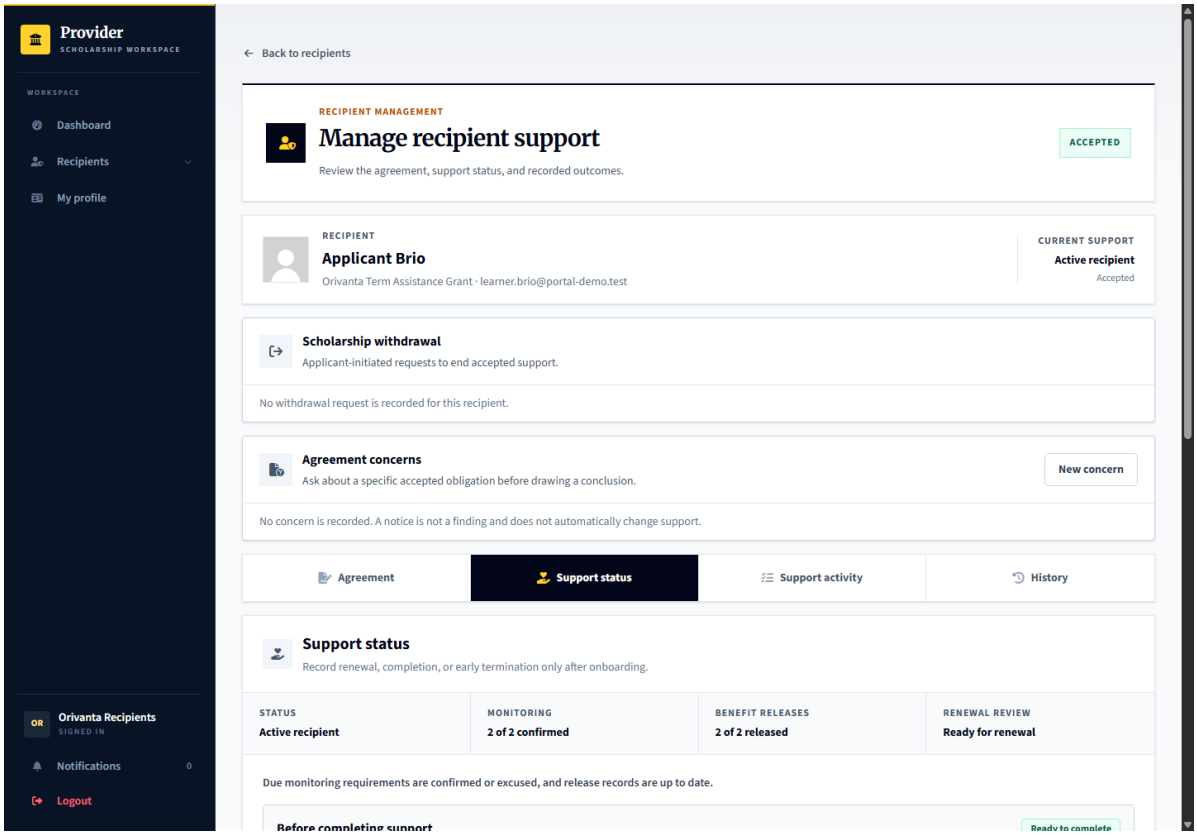

Current hosted view | learner.aurora | applicant agreement

19 Recipient support and agreement tracking

Signed in account: orivanta.recipients

Page shown: Recipient closeout

Use orivanta.recipients to inspect Applicant Brio in Orivanta Term Assistance Grant. The agreement is accepted and its original-document check is closed. The support-status record is ready for a deliberate renewal or completion decision; agreement concerns and withdrawal branches are separate and are not pre-recorded.

Current hosted view | orivanta.recipients | recipient closeout

Applicant: responds to the agreement and follows accepted responsibilities. Provider: orivanta.recipients manages the support record. Admin: handles independent cases or oversight when required.

20 Applicant scholarship support and in person check in

Signed in account: learner.cielo

Page shown: Applicant check in

The applicant reads the appointment date, venue, and documents to bring. This check-in is an in-person handoff, not a request to upload grades or enrollment records.

Use learner.cielo and select Orivanta Term Assistance Grant in Scholarship Support. This is the upcoming original-document appointment. Cielo also has a separate Continuing Learners Grant record where attendance is already recorded and the provider is reviewing documents; do not confuse the two programs.

Open the appointment and prepare the originals

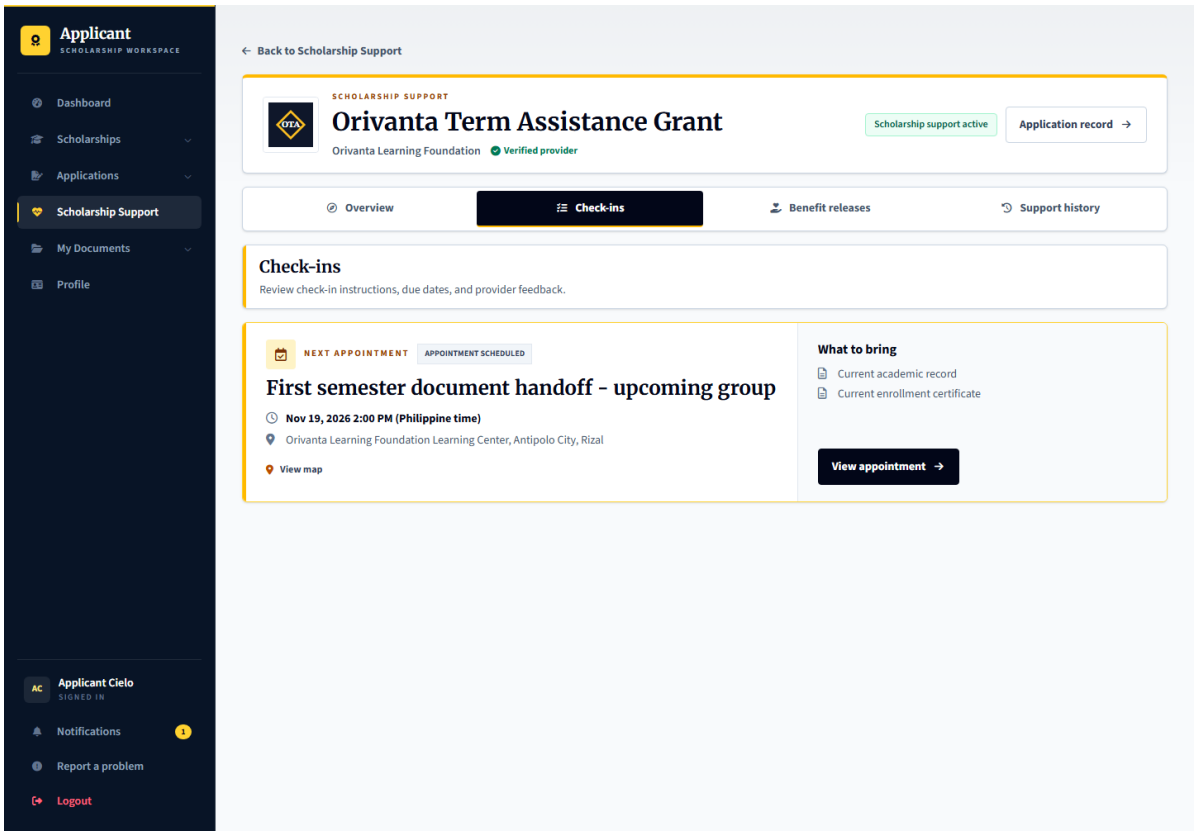

Signed in account: learner.cielo

1. Open Orivanta Term Assistance Grant, then Check-ins and the upcoming appointment. Read its date, time, exact venue, map pin and the original records requested.

2. Open the upcoming appointment and read the Manila date, time, venue, and instructions.

3. Bring the current academic record and enrollment certificate. This record has no applicant upload form.

4. Use View map for the venue and follow the appointment instructions. Contact the provider for a different schedule; do not upload substitute files for this in-person check. Return after attendance for the provider-recorded results.

Current hosted view | learner.cielo | applicant check in

21 Provider monitoring evidence review

Signed in account: orivanta.monitoring

Page shown: Monitoring plan

The monitoring officer records attendance and checks the original documents at the handoff. Recording document results and closing a check-in are separate from a decision about the entire scholarship.

Use Orivanta Continuing Learners Grant. Applicant Cielo (learner.cielo) attended and needs original-document results. Applicant Dune (learner.dune) is ready for check-in closure. Applicant Brio (learner.brio) has a closed check-in. Admin oversight does not replace the monitoring officer actions.

Select a recipient and open the monitoring checklist

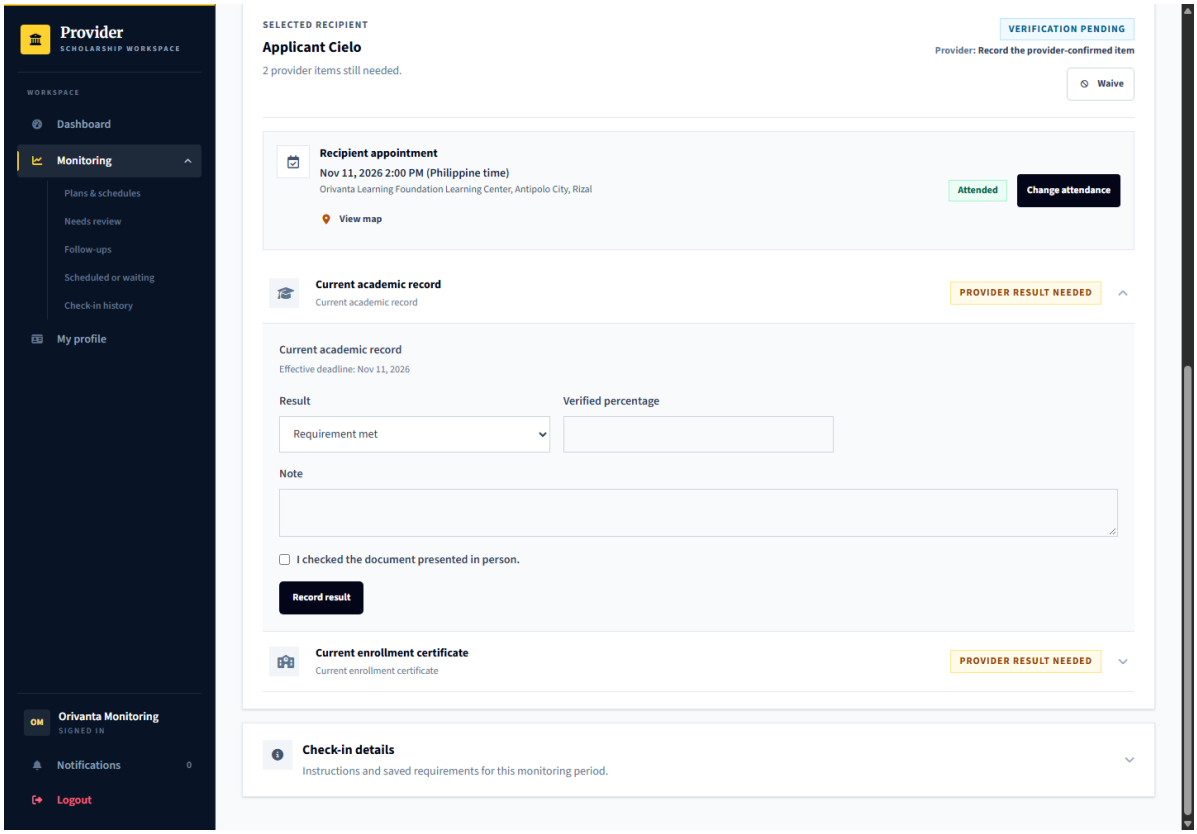

Signed in account: orivanta.monitoring

1. As orivanta.monitoring, open Orivanta Continuing Learners Grant and select Applicant Cielo in the attended check-in. Attendance is recorded; current academic and enrollment results still need the provider review.

2. Select Applicant Cielo from the roster. Attendance is already recorded; the two original documents still need provider results.

3. Open Current academic record. Compare the original, enter the verified grade and grading scale, select the result and record notes. Repeat for Current enrollment certificate. These are provider records, not applicant uploads.

4. Switch to Applicant Dune to demonstrate Close check-in after both items are met. Review the closure dialog and confirm the case outcome. Closing one check-in does not renew or end the scholarship.

Current hosted view | orivanta.monitoring | monitoring academic result

Set up and activate the monitoring plan

Signed in account: orivanta.monitoring

The plan is the reusable support policy. A published check-in is the actual recipient appointment. Orivanta Continuing Learners Grant already has an active plan to inspect without replacing it.

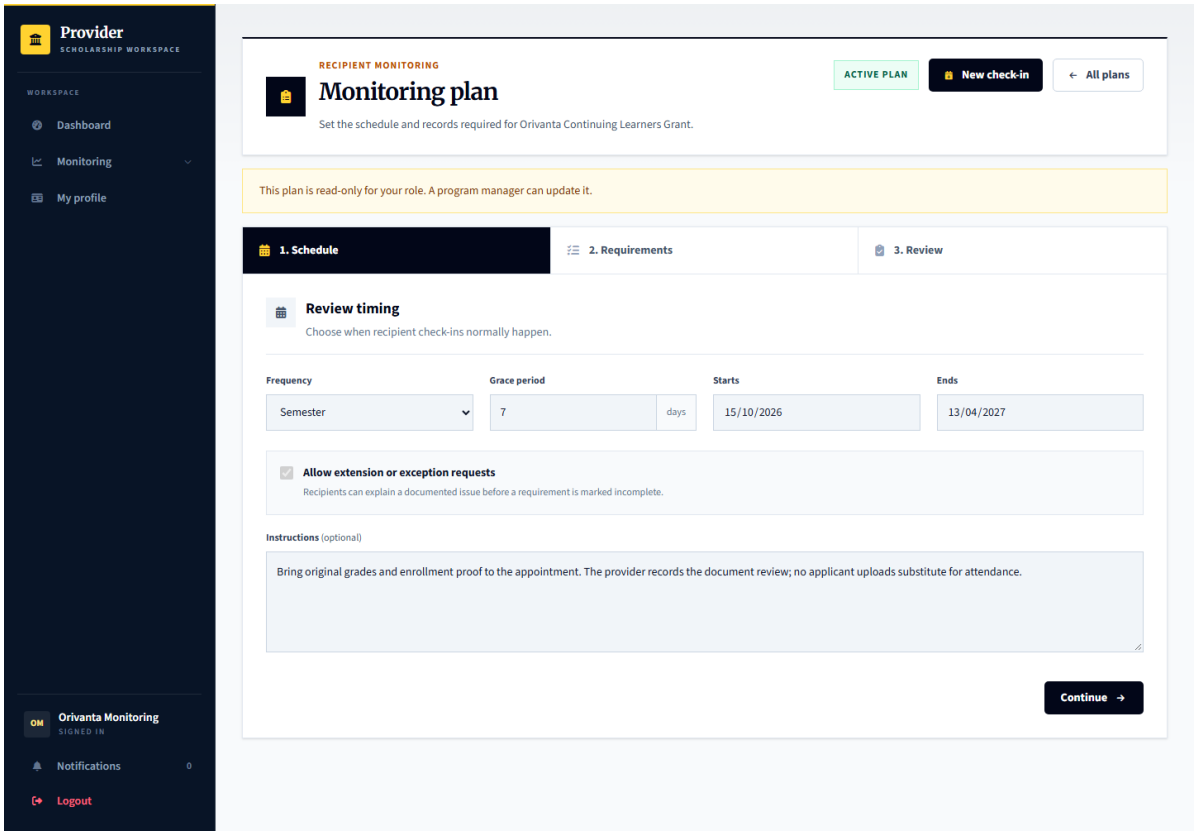

1. Open the program monitoring plan. In Schedule, set the review frequency, support start and end dates, grace period and whether extension or exception requests are allowed.

2. In Requirements, add only necessary academic, enrollment or other program checks. For academic progress, choose the required minimum and grading scale.

3. Configure the actual evidence method. The demonstrated check-ins require the provider to inspect originals at an appointment, not accept an applicant upload as verified proof.

4. Open Review and compare all settings with the published support terms. Save draft while preparing; activate only the intended complete plan after confirmation.

5. Use orivanta.monitoring to publish individual appointments from the active plan. Activating a plan does not by itself assign every recipient to a new appointment.

Current hosted view | orivanta.monitoring | monitoring plan

Expected result and handoff: The active plan supplies a versioned basis for future check-ins. Changes must not silently rewrite previously published periods.

Publish a check in for the selected recipients

Signed in account: orivanta.monitoring

Use New check-in from the active Learning Continuity Grant plan. Inspect the form without publishing if you only want to demonstrate its controls.

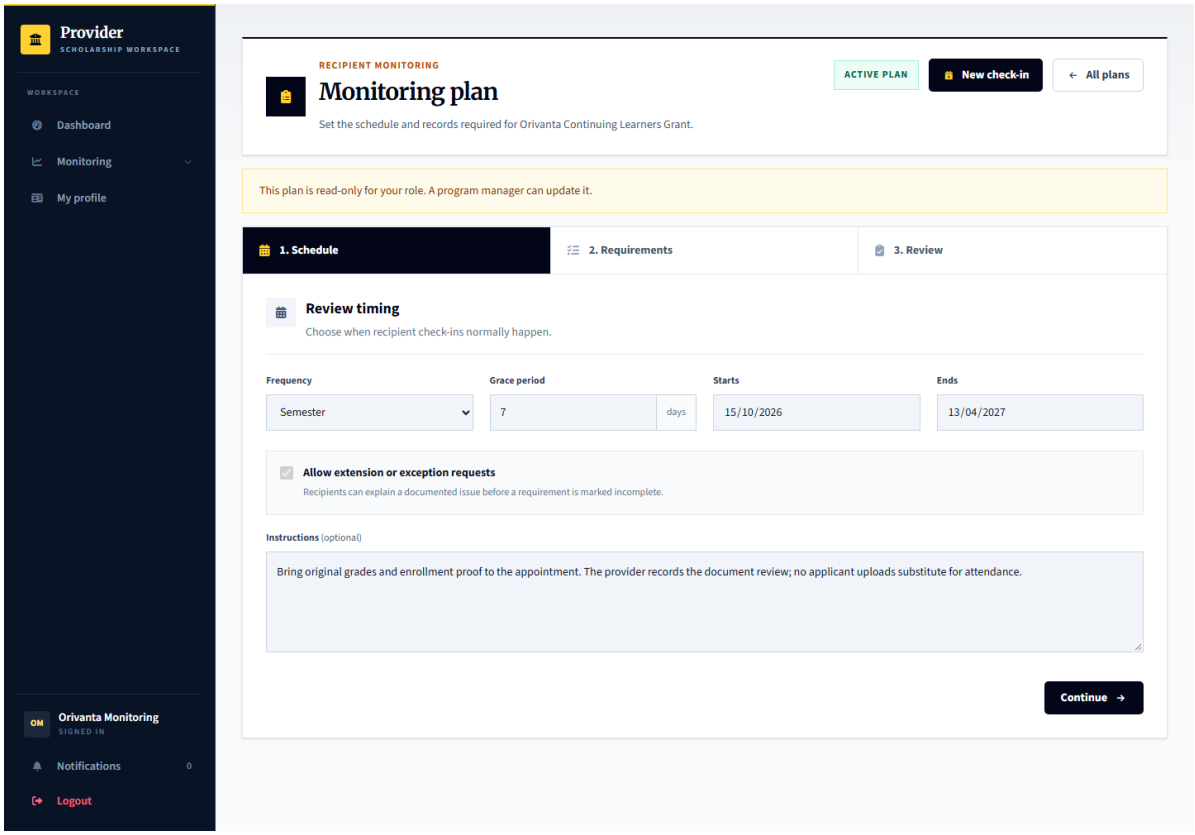

1. Open Plans and schedules, choose the grant and select New check-in.

2. Name the period, academic year and appointment. Set the actual date, time, venue, original documents to bring and short recipient instructions.

3. Choose the intended accepted recipients from the roster. Keep separate sessions or recipient arrangements for different dates and venues instead of publishing overlapping appointments.

4. Review the recipient count and instructions, then confirm Publish check-in only when ready. Cancel leaves the current data unchanged.

5. Sign in as an assigned applicant and open Scholarship Support then Check-ins. Confirm that the appointment and required originals appear for that applicant.

Current hosted view | orivanta.monitoring | monitoring plan

Expected result and handoff: The chosen recipients receive their appointment. A plan alone, an unassigned roster entry or a published date is not attendance or completed review.

Record attendance originals and case closure

Signed in account: orivanta.monitoring

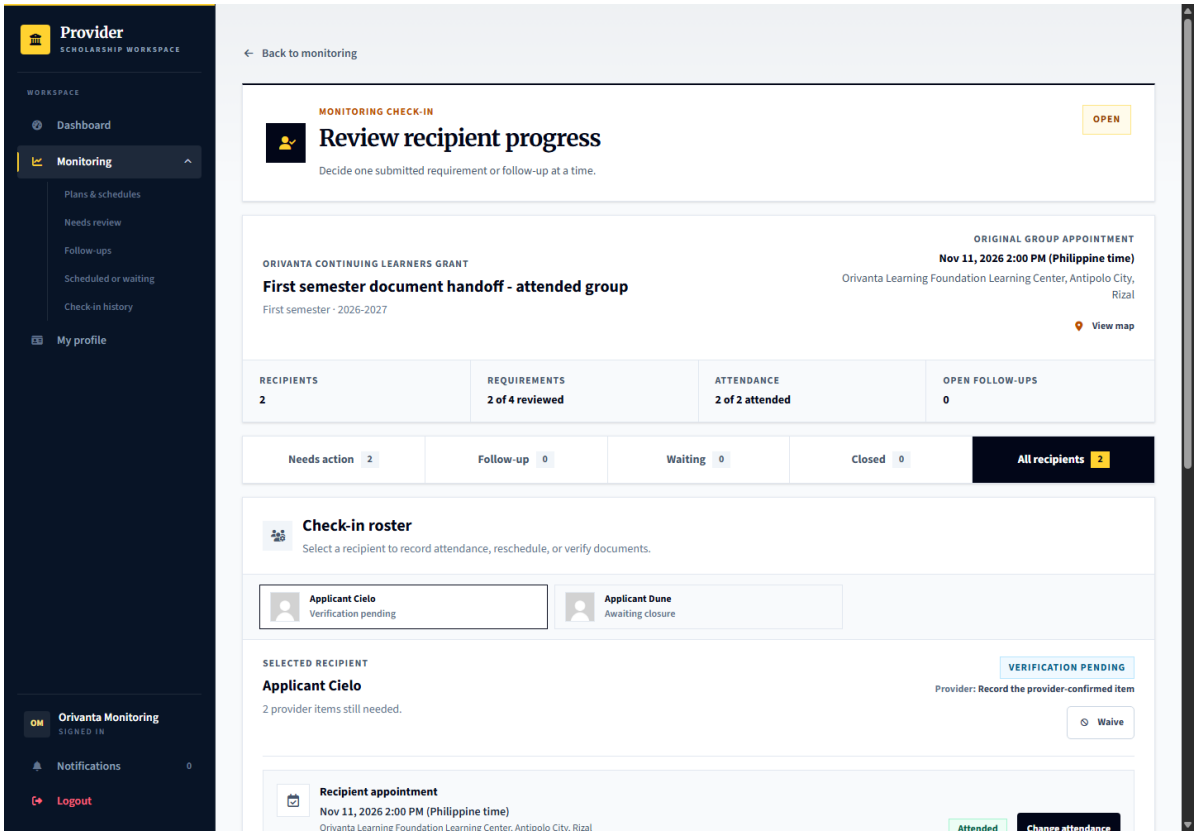

The attended Continuing Learners Grant roster has Applicant Cielo awaiting document review and Applicant Dune ready for closure. The separate closed example for Applicant Brio belongs to Term Assistance Grant. Select both the correct program and person before opening an item.

1. For a new actual appointment, record Attended only after the applicant attends. If the appointment changes, use the reschedule controls and notify the recipient instead of pretending the old meeting occurred.

2. Review Applicant Cielo in Continuing Learners Grant. Open Current academic record, inspect the physical original, and record the verified grade, scale, result and notes. Repeat for enrollment. Applicant Dune in this same grant has both required items met and can demonstrate Close check-in.

3. If an extension, exception or follow-up is genuinely needed, record it through the available request or follow-up controls and resolve it before normal closure. Do not mark a pending item met to remove the blocker.

4. Select Applicant Dune. Both items are already met. Choose Close check-in, review the outcome and confirm it. The applicant can then read the closed result.

Current hosted view | orivanta.monitoring | monitoring ready to close

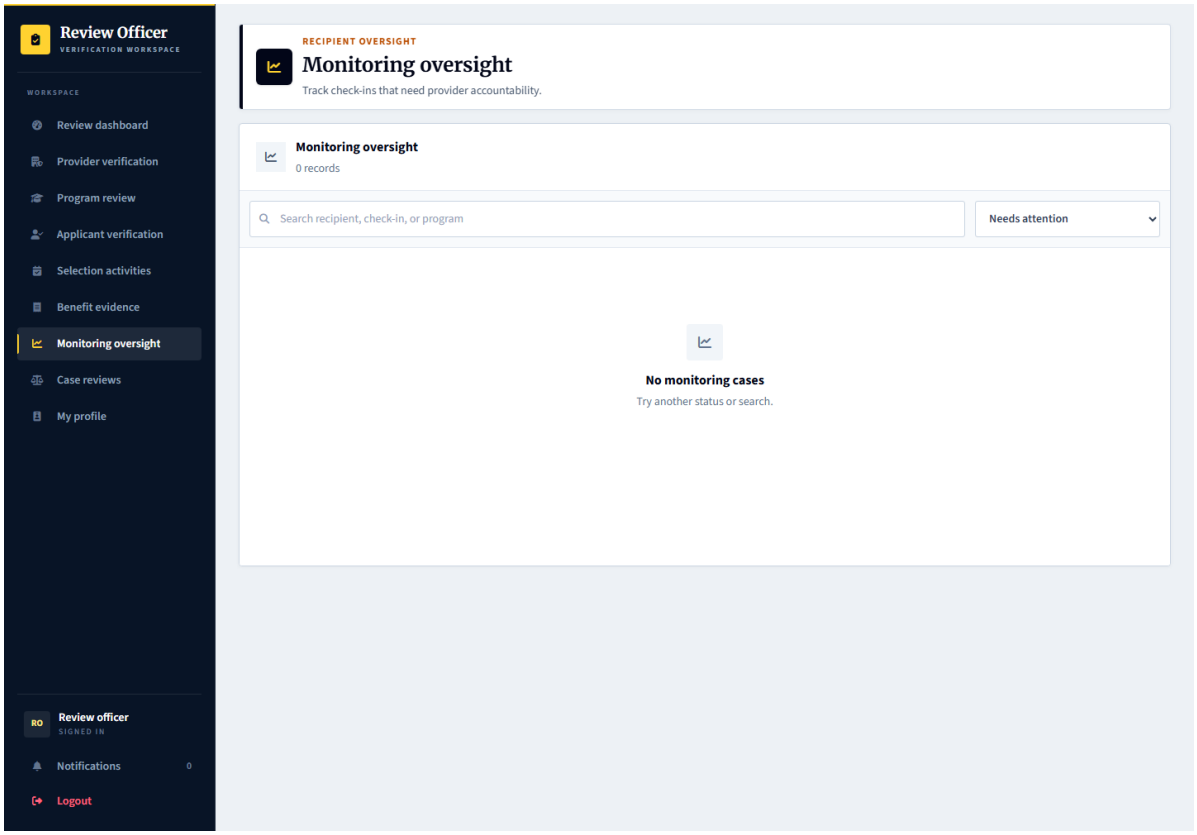

Expected result and handoff: Check-in closure records a period outcome. The Recipient Officer still makes any renewal, completion or other support decision separately.

22 Admin monitoring oversight

Signed in account: lumenops.reviews

Page shown: Admin monitoring

The review officer can inspect monitoring records and supporting evidence through its own oversight workspace. This is separate from routine provider checklist review.

Current hosted view | lumenops.reviews | admin monitoring

Applicant: brings the required records. Provider: records attendance, document results, and any follow-up. Admin: inspects the saved record without replacing the provider result.

Inspect the exact support record as an admin

Signed in account: lumenops.reviews

Admin monitoring oversight is an inspection and oversight workflow, not a shortcut for a provider document result.

1. Open Monitoring oversight and select the Learning Continuity Grant recipient or period rather than stopping at totals.

2. Inspect appointment, attendance, individual requirement results, provider notes and review history.

3. Use the available admin review controls only for their stated oversight purpose. A separate case review requires its own notice, evidence and response process.

4. Return the operational next action to orivanta.monitoring or orivanta.recipients. Do not claim an admin observation confirms receipt of a benefit.

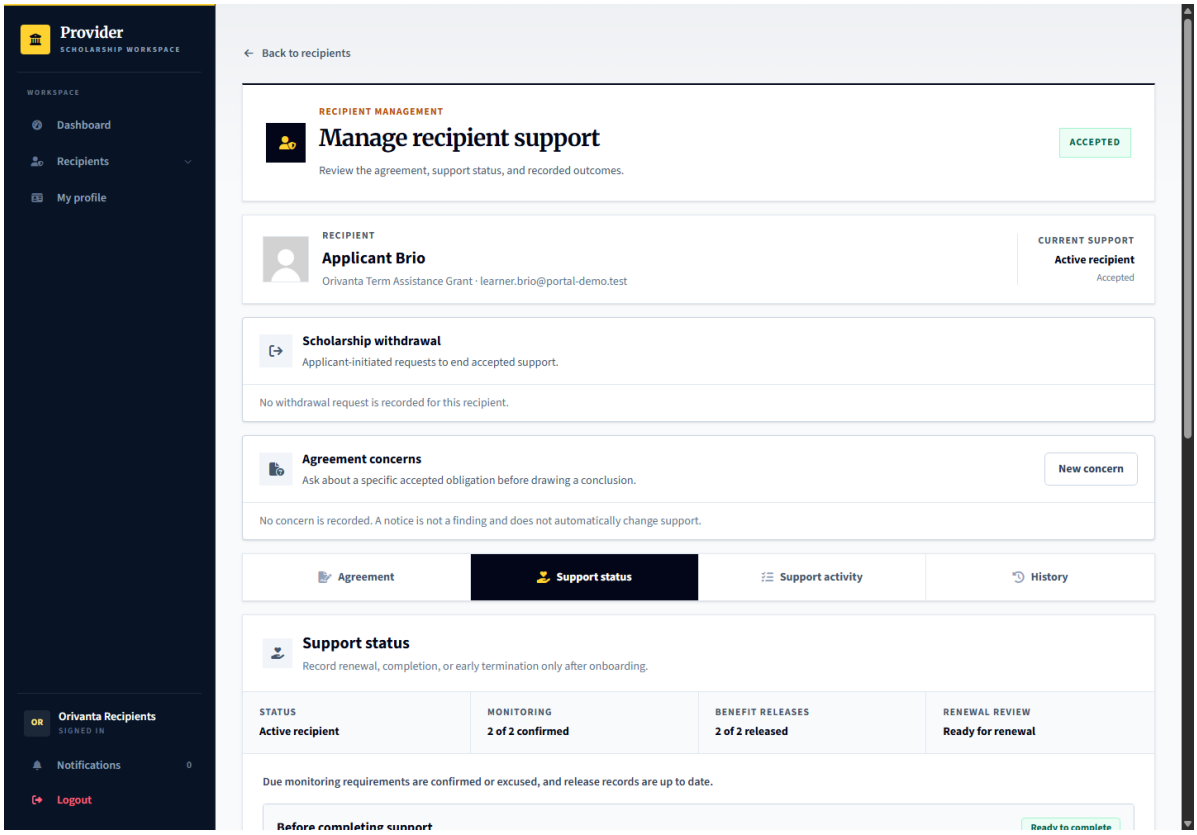

23 Renewal completion and support decisions

Signed in account: orivanta.recipients

Page shown: Recipient closeout

Open Applicant Brio, learner.brio, in Orivanta Term Assistance Grant as orivanta.recipients, then Support status. Its check-in is closed and both allowance and school-supplies receipts are confirmed. Renew support if the award continues, or complete support when the agreed obligations are finished. The current support decision is

deliberately left to the tester. Outstanding schedules, unconfirmed receipts and unresolved delivery issues block normal completion.

Current hosted view | orivanta.recipients | recipient closeout

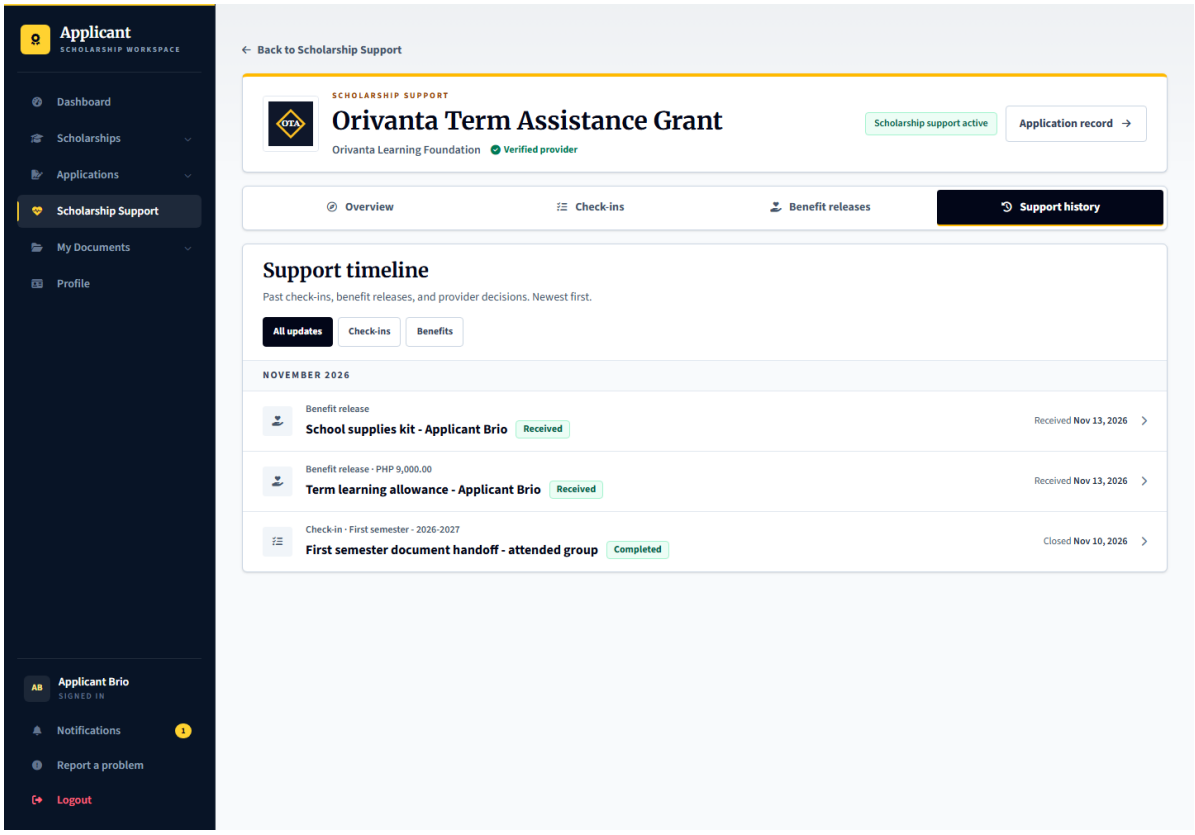

For an early end, record the effective date, notice date, and reason. A decision based on an agreement concern still requires the applicable independent review and appeal opportunity. Do not use this form to record voluntary withdrawal; review the recipient request in Section 27.

In practice, the award terms determine whether support ends at graduation, at the end of a term, or through an early decision. A period ending without renewal is not the same as ending it early. Some programs require final documents before the last release. See UP Diliman DOST-ASTHRDP procedures and CHED Merit Scholarship guidelines on notice and appeal.

Read the applicant closeout summary

Signed in account: learner.brio

The screenshot shows learner.brio in the Term Assistance Grant support history before a current renewal or completion has been saved. There is no separate pre-renewed applicant. First record the intended eligible support decision as orivanta.recipients, then return with this same applicant to inspect its saved reason, effective date and available response. Completed support moves to Past support only after completion.

Current hosted view | learner.brio | applicant history

Review outcome opens the decision and available response options. Benefit totals are saved with new closeouts and also appear in Support history. Later receipts update the benefit record, not the saved totals. Older decisions without saved totals still link to benefit records.

Renew support and read the recipient response

Signed in account: orivanta.recipients

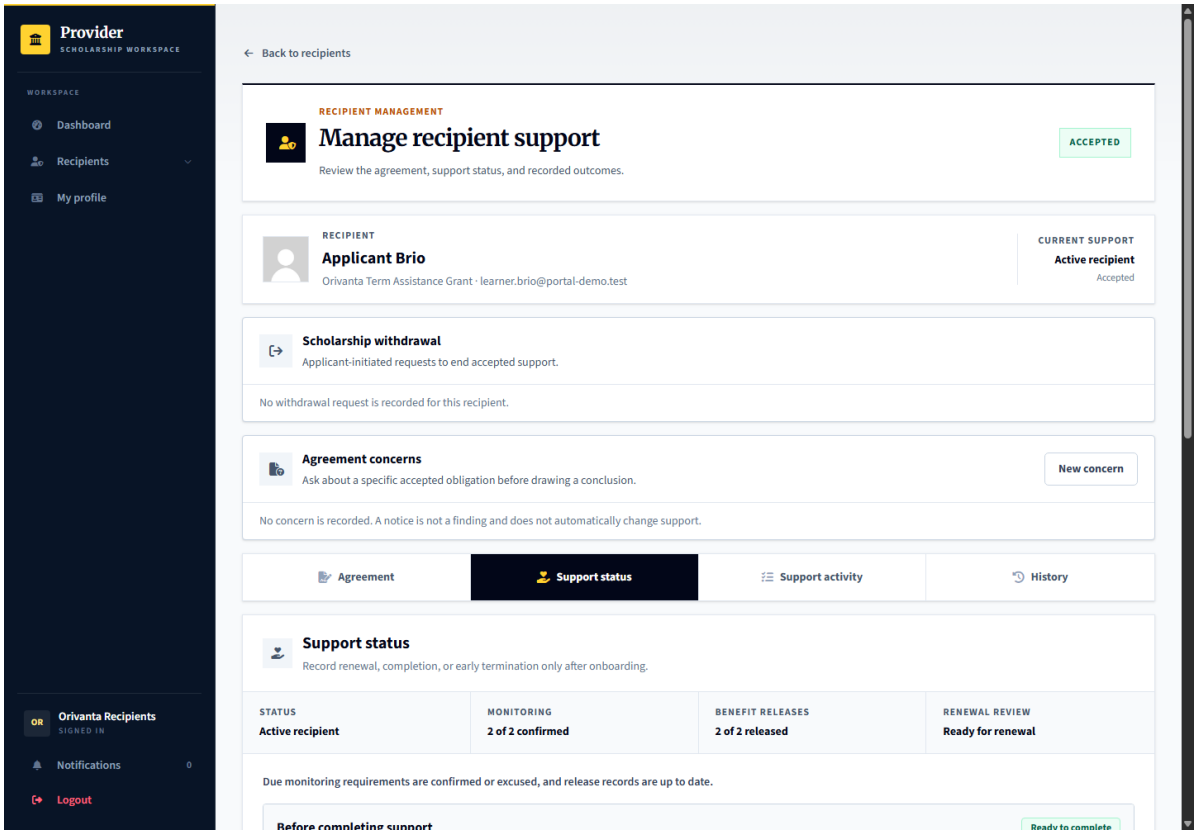

Applicant Brio in Orivanta Term Assistance Grant is the prepared renewal/completion record. No renewal response is pre-created. The same learner.brio account will read and acknowledge the outcome after the tester saves it.

1. Open Applicant Brio in Term Assistance Grant and inspect Support status. Check the closed document review, accepted agreement and settled cash and school-supplies benefits. Choose Renewed only when the provider intends to continue support.

2. Record a matching reason category, effective date, renewed support end, next review and the next-period terms. Review the confirmation before saving.

3. Sign in as the recipient. Open Support history and the renewal outcome, then read its dates, reasons and terms. Use the acknowledgment or permitted response rather than accepting a different current program page.

4. Do not look for a separate successful-renewal account. The response becomes available on learner.brio after this actual provider decision. Refresh the history if another tab was already open.

Current hosted view | orivanta.recipients | recipient closeout

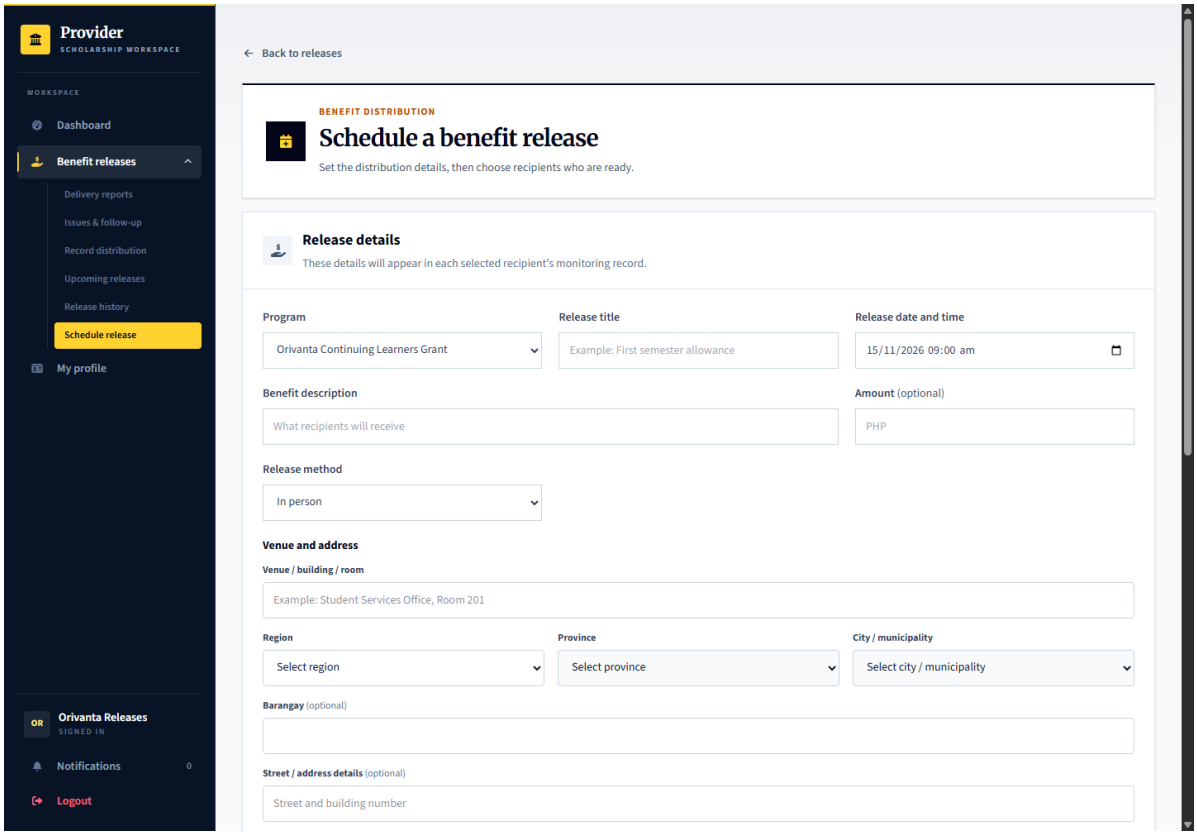

Expected result and handoff: A renewed support decision and its recipient response remain in history. Future check-ins and releases still need their own planning and completion.

24 Planning the first or one time benefit release

Signed in account: orivanta.releases

Page shown: Provider release schedule

The benefit release officer can schedule the first distribution after the required agreement state without creating recurring monitoring merely to distribute a benefit. One-time awards can use no recurring monitoring policy.

Current hosted view | orivanta.releases | provider release schedule

Applicant: learner.brio or learner.aurora is ready for planning. Provider: orivanta.releases schedules the benefit and instructions. Admin: checks benefit evidence or service payment records in the relevant separate workspace, not a fictitious scholarship transfer.

Plan cash digital and non cash benefits

Signed in account: orivanta.releases

Use learner.brio in Continuing Learners Grant for a first release that is not yet scheduled, or learner.aurora in School Essentials Award for one-time release planning. A selected outcome alone is insufficient; the prepared examples have already accepted their agreements.

1. Open the release scheduling form and choose the program, agreed benefit and accepted recipients. The release amount or description must match what is actually being delivered.

2. For In person, provide collection date, venue, map pin, instructions and any original-document verification requirement.

3. For Bank transfer or E-wallet, recipients submit their private destination for this release and the provider reviews it before recording a transfer. The portal does not transfer the money.

4. For the School supplies kit, set In person, the structured venue and map pin, collection instructions, and the proof required after distribution. A supplies kit is an in-kind benefit, not a bank transfer or mentoring session.

5. Review and publish only the intended distribution. After actual delivery, record the recipient result and proof; the applicant still confirms receipt or reports an issue.

Expected result and handoff: A published benefit release is a schedule, not delivery proof. Scholarship payments and provider purchases of platform services remain separate.

25 Recording actual benefit distribution

Signed in account: orivanta.releases

Page shown: Provider benefit distribution record

A published release schedule is a plan, not proof of delivery. The release officer records distribution for each recipient and attaches the required evidence. The school supplies kit has collection instructions and a venue map; bank and e-wallet awards require payout details and provider transfer evidence.

Applicant: learner.brio and learner.brio await provider distribution recording. Provider: orivanta.releases records the distribution. Admin: can inspect benefit evidence; demo payment and benefit records do not prove real transfers.

Open the distribution record and record delivery

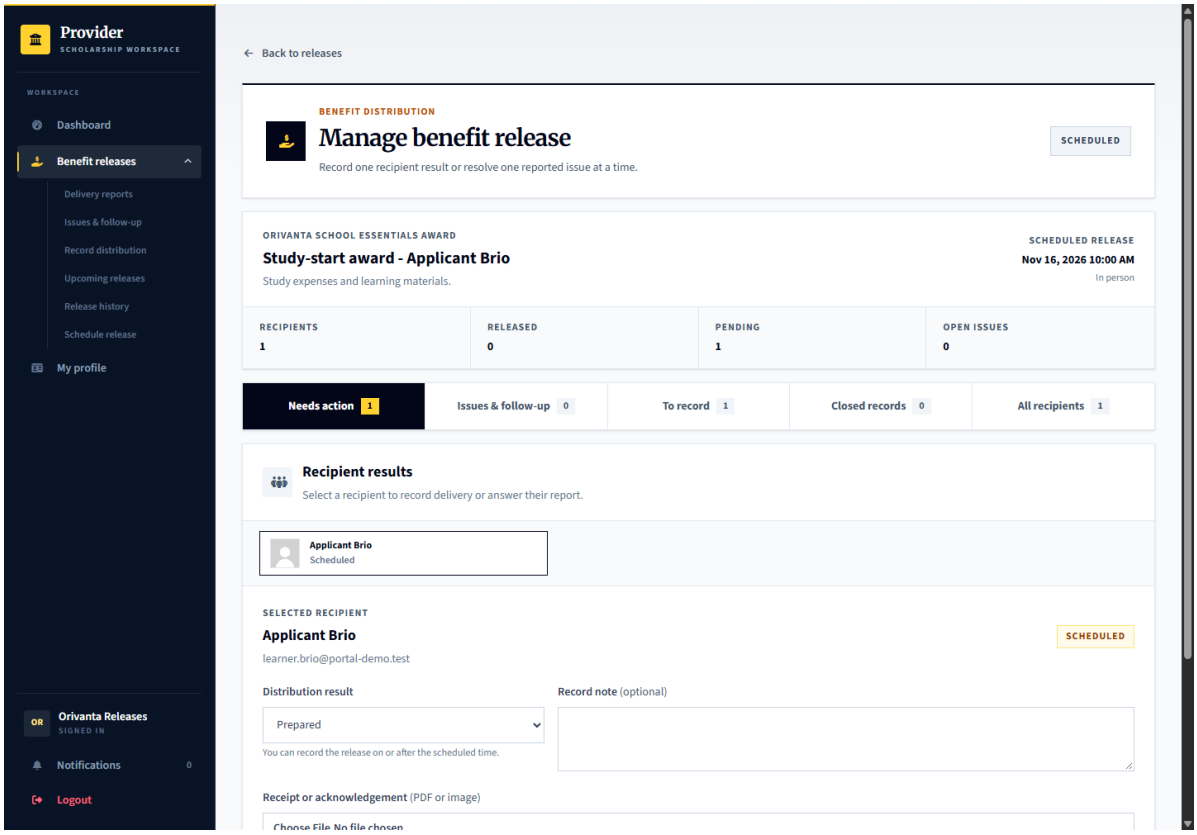

Signed in account: orivanta.releases

1. Select the relevant release from Record distribution and confirm the title, schedule and recipients.

2. Select the intended recipient and inspect the current distribution status before entering a result.

3. Record actual delivery details and attach required proof. Do not mark a scheduled event as delivered merely because its date arrived.

4. The applicant must still confirm receipt or report an issue. Provider evidence alone cannot make that response for the applicant.

Current hosted view | orivanta.releases | provider release record

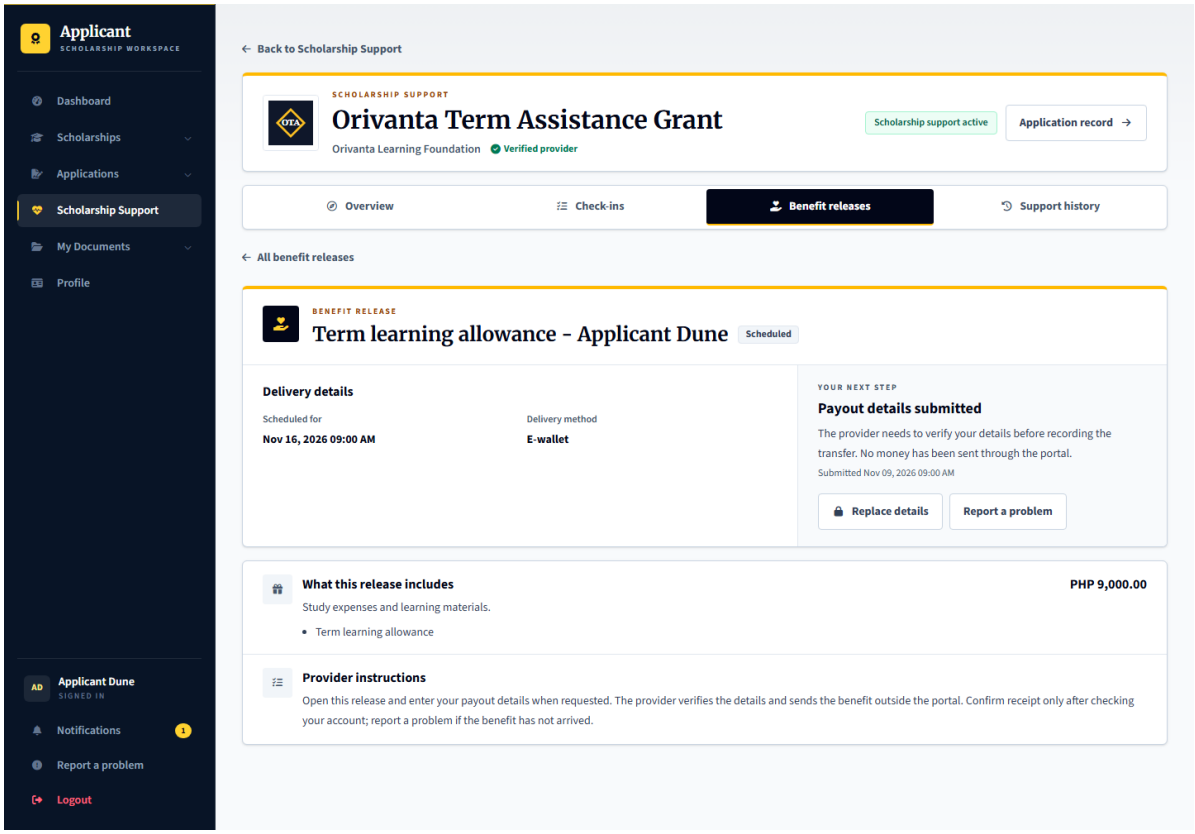

Submit payout details for a digital benefit

Signed in account: learner.dune

1. Use a newly scheduled bank or e-wallet release that actually requests destination details to demonstrate entering them. The prepared learner.dune Term Assistance Grant record has already submitted its fictional e-wallet destination, so its current screen demonstrates the submitted status rather than an empty entry form. The provider must review it next.

2. Choose Add payout details. Enter the institution, account holder, and the fictional account number for the release method.

3. Review and submit. The provider must review the destination; saving the details does not send money.

Current hosted view | learner.dune | applicant payout

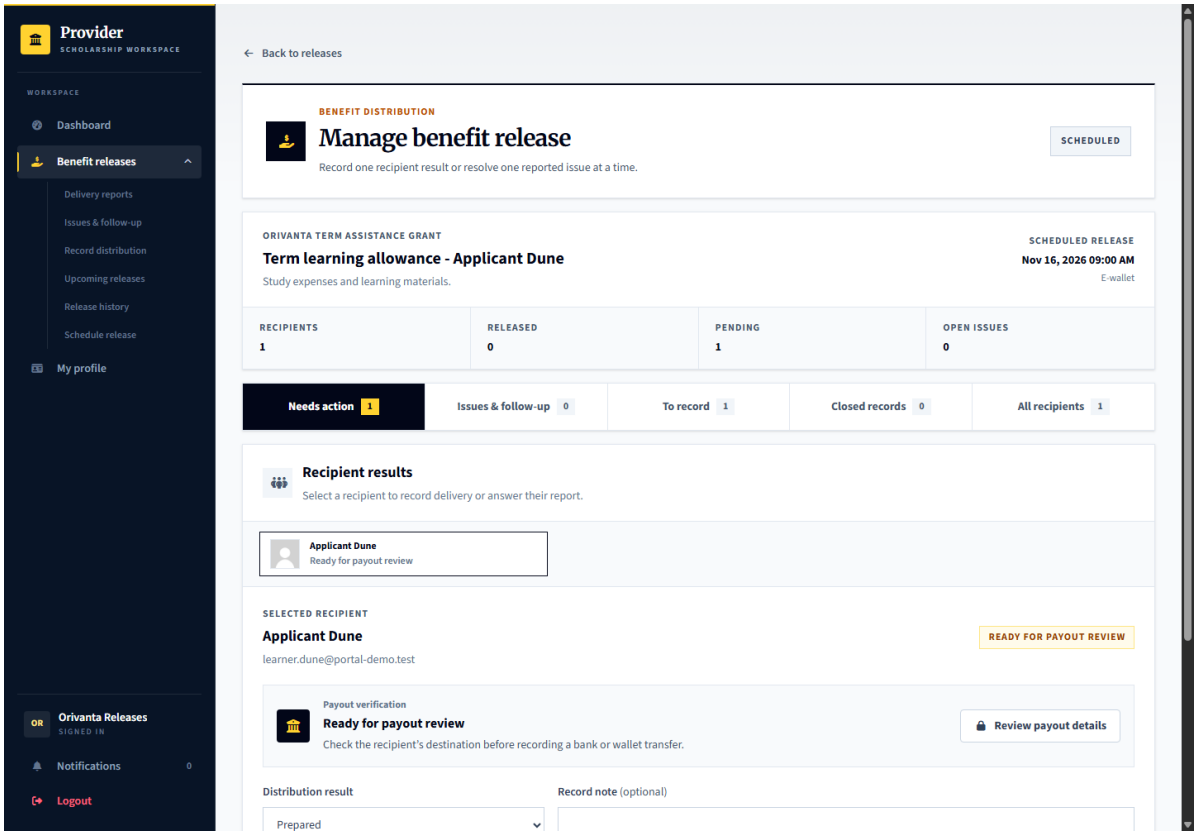

Review the payout destination

Signed in account: orivanta.releases

Use the scheduled Term Assistance Grant release for Applicant Dune. Its e-wallet details are submitted and still await provider review. Compare only the information necessary to confirm the destination; request a correction with a specific reason when it cannot be confirmed.

2. Inspect the submitted details. Approve a matching destination or request a correction from the applicant.

3. Approval unlocks recording a transfer. It does not send the benefit and does not confirm receipt.

Current hosted view | orivanta.releases | provider payout review

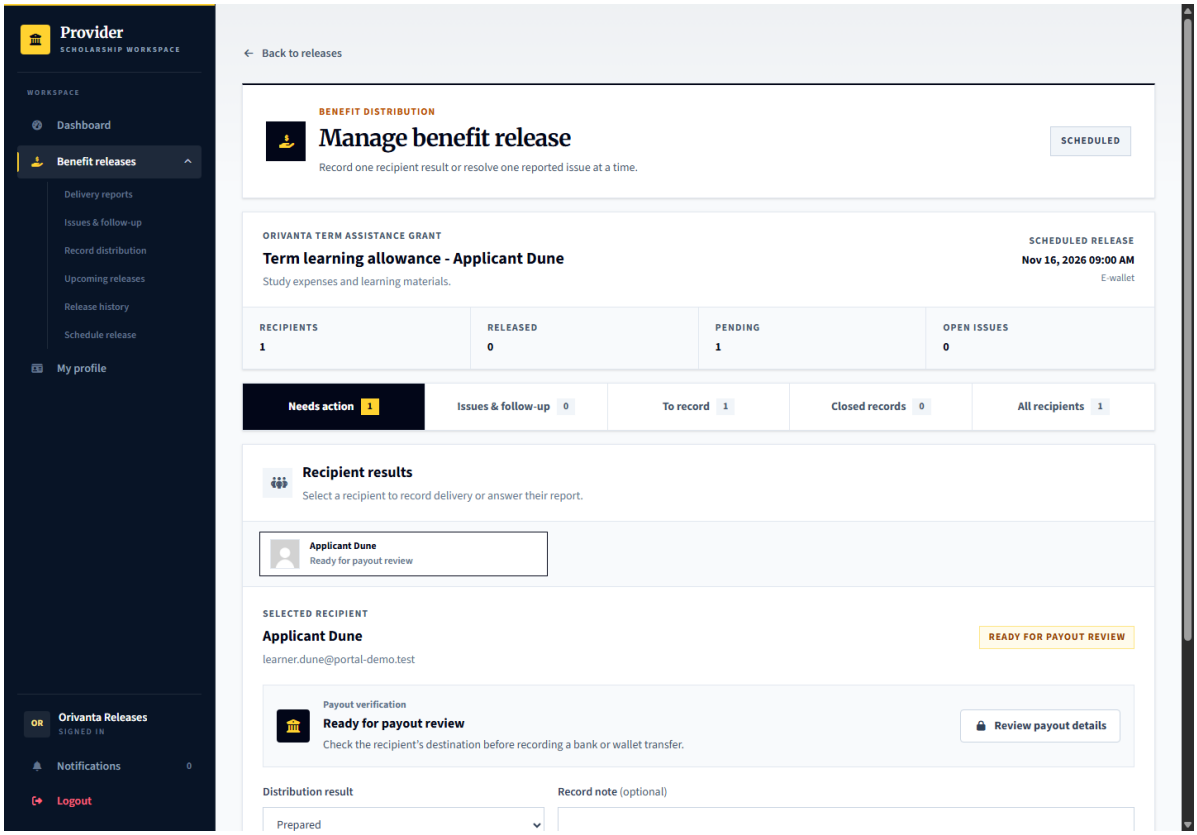

Record simulated transfer proof

Signed in account: orivanta.releases

1. For this same Applicant Dune release, finish the payout destination review first. The reset does not include a separate pre-approved bank transfer. Only after approval should the release officer record the actual simulated transfer date, reference and required provider proof. The platform records the evidence; it does not send bank money itself.

2. For the demo, record a simulated transfer date and attach fictional proof. Do not send real money. In actual use, record a transfer only after completing it outside the portal.

3. Confirm the record. The applicant can then acknowledge receipt or report a problem.

Current hosted view | orivanta.releases | provider payout review

Follow up a missed benefit release

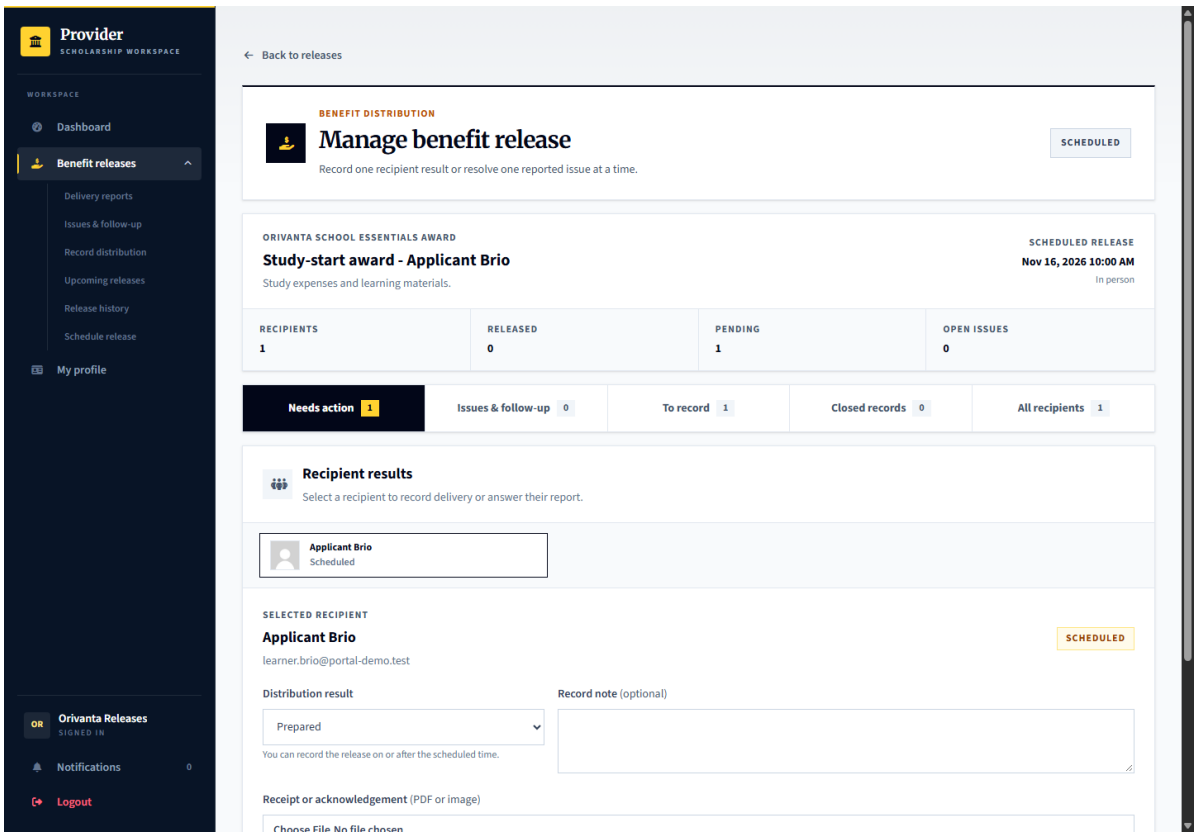

Signed in account: orivanta.releases

1. Open the distribution, select the recipient, and record the missed release only if the scheduled delivery did not happen. Find it again under Issues & follow-up.

2. Send a follow-up notice with instructions and at least seven days to reply. Allow at least two days between contact attempts. The reminder must leave at least two more days to reply and cannot shorten the original deadline.

3. The recipient can ask for a new arrangement or explicitly decline the benefit. Keep the missed attempt in history and link a replacement release when applicable. An actual reply stops closure for no response.

The reset does not pre-record a missed collection. learner.brio in Orivanta School Essentials Award has an upcoming collection appointment. Create a missed-release branch only after the scheduled time and actual non-attendance, then follow the required notice, reminder and response periods. Do not backdate contact or change the clock to unlock a shortcut.

Current hosted view | orivanta.releases | provider release record

Reply to an uncollected benefit notice

Signed in account: learner.brio

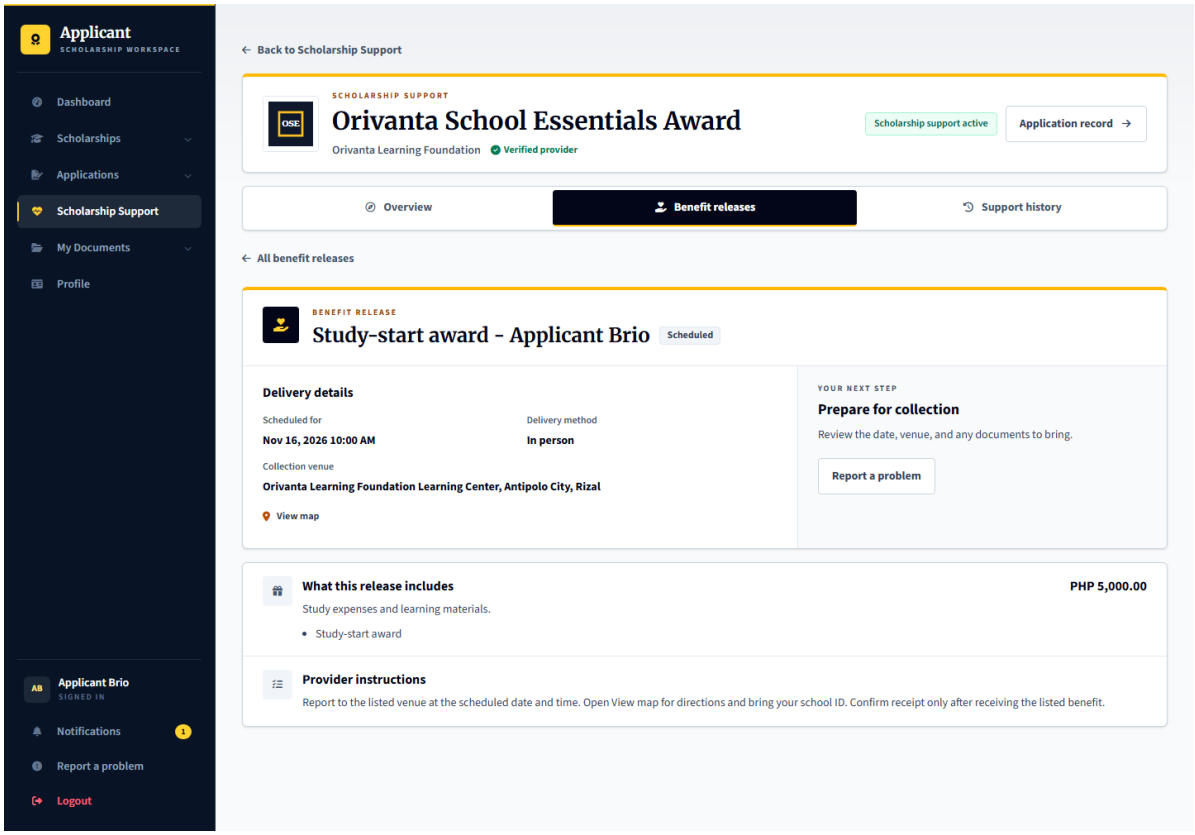

Use learner.brio and School Essentials Award for the upcoming collection. There is no open missed-benefit notice. The reply instructions apply only after the tester legitimately records a missed collection and issues the required notice.

1. Once a follow-up notice actually exists, sign in as the applicant, open the award, Benefit releases and the release follow-up. Read the instructions and response deadline.

2. Choose the available response to request a new arrangement if the applicant still wants the benefit, or explicitly decline it only if that is the intended decision. Explain the circumstances and confirm.

3. As orivanta.releases, open the same missed release. Read the actual recipient response. For continued collection, schedule and link an eligible replacement for the same person and benefit.

4. Keep the missed attempt and notice in history. Record actual replacement delivery and obtain recipient receipt confirmation; do not label the missed original as received.

Current hosted view | learner.brio | applicant upcoming release

26 Applicant receipt and delivery reports

Signed in account: learner.aurora

Page shown: Applicant benefit receipt record

The applicant reviews recorded benefits and confirms actual receipt or reports missing, partial, or unclear delivery. A provider statement or upload alone does not count as the applicant confirming receipt.

Applicant: learner.aurora is the recurring-support example and learner.cielo the one-time example. Provider: orivanta.releases responds to delivery reports and supplies correction proof. Admin: can independently review escalated delivery cases but cannot substitute its finding for receipt confirmation.

Open a benefit record before confirming receipt

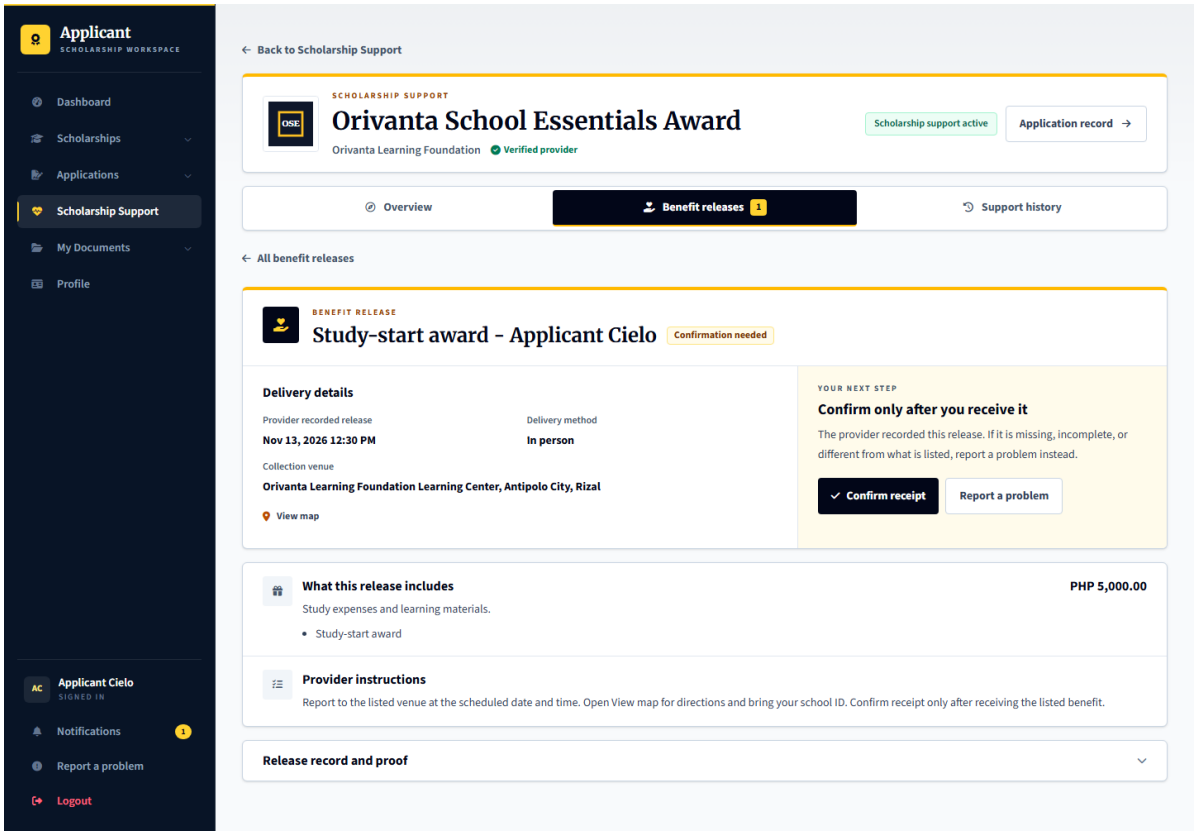

Signed in account: learner.cielo

1. Open the relevant benefit record rather than confirming from the list alone.

2. Read the recorded distribution details, benefit amount or description, and any available proof.

3. Confirm receipt only if you actually received the stated benefit. If it is missing or incomplete, use the delivery-issue response.

4. When a response is already recorded, inspect its status and history instead of sending a duplicate confirmation.

Current hosted view | learner.cielo | applicant receipt

Complete a one time award without recurring monitoring

Signed in account: orivanta.recipients

Use Applicant Dune, learner.dune, in Orivanta School Essentials Award. The one-time benefit is released and its receipt confirmed, so the provider can demonstrate completion. There is no recurring monitoring plan for this award, and the completion decision itself remains for the tester.

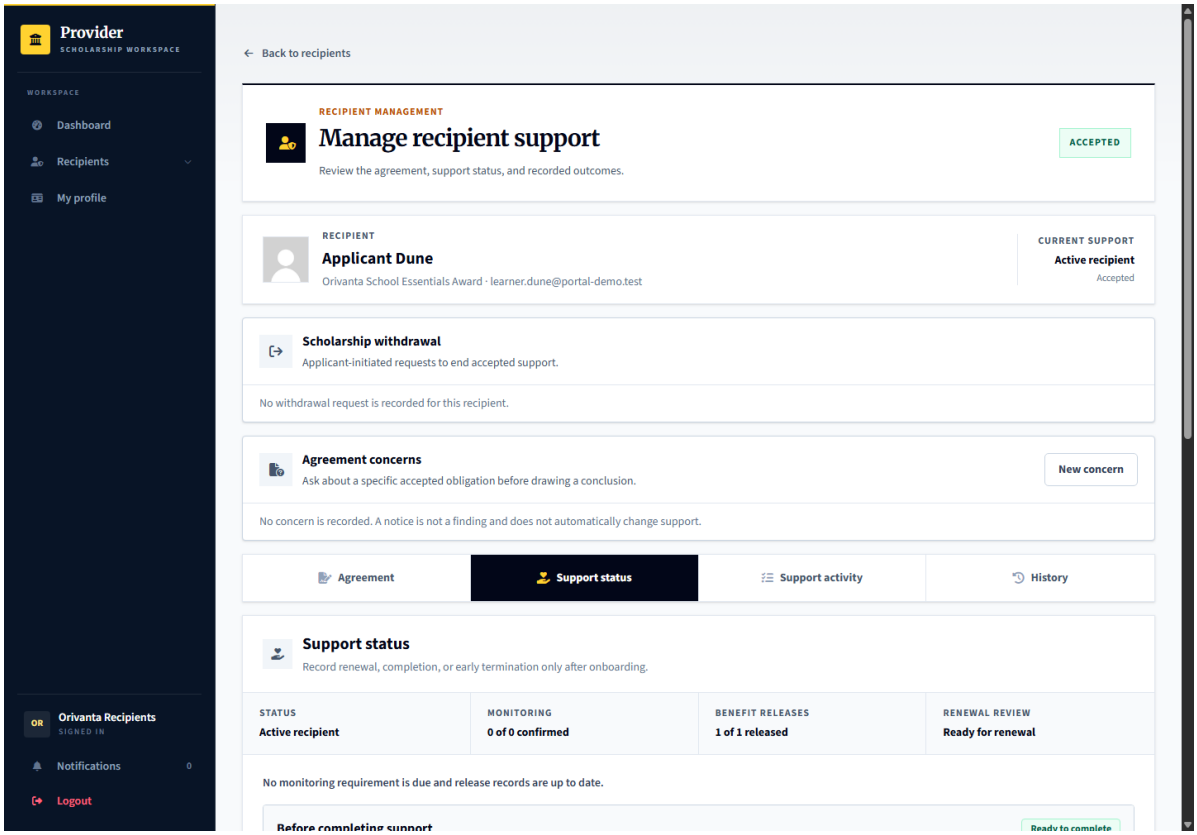

1. As Applicant Cielo, open Scholarship Support, Benefit releases, then the specific release record. Review the recorded delivery and proof before choosing Confirm receipt.

2. Confirm only the benefit actually received. If something is missing, submit the appropriate issue instead; a provider cannot confirm it for the applicant.

3. As orivanta.recipients, select Applicant Dune and open Support status. Before completing support shows the agreed one-time benefit settled with no outstanding distribution or delivery issue.

4. Choose Complete support with the accurate completion reason and effective date, then review and confirm. Do not create an unnecessary semester plan or grade check for this one-time award.

5. As Applicant Dune afterward, open Past support and the outcome to read the saved completion reason, dates, benefit summary and any permitted response.

Current hosted view | orivanta.recipients | recipient one time closeout

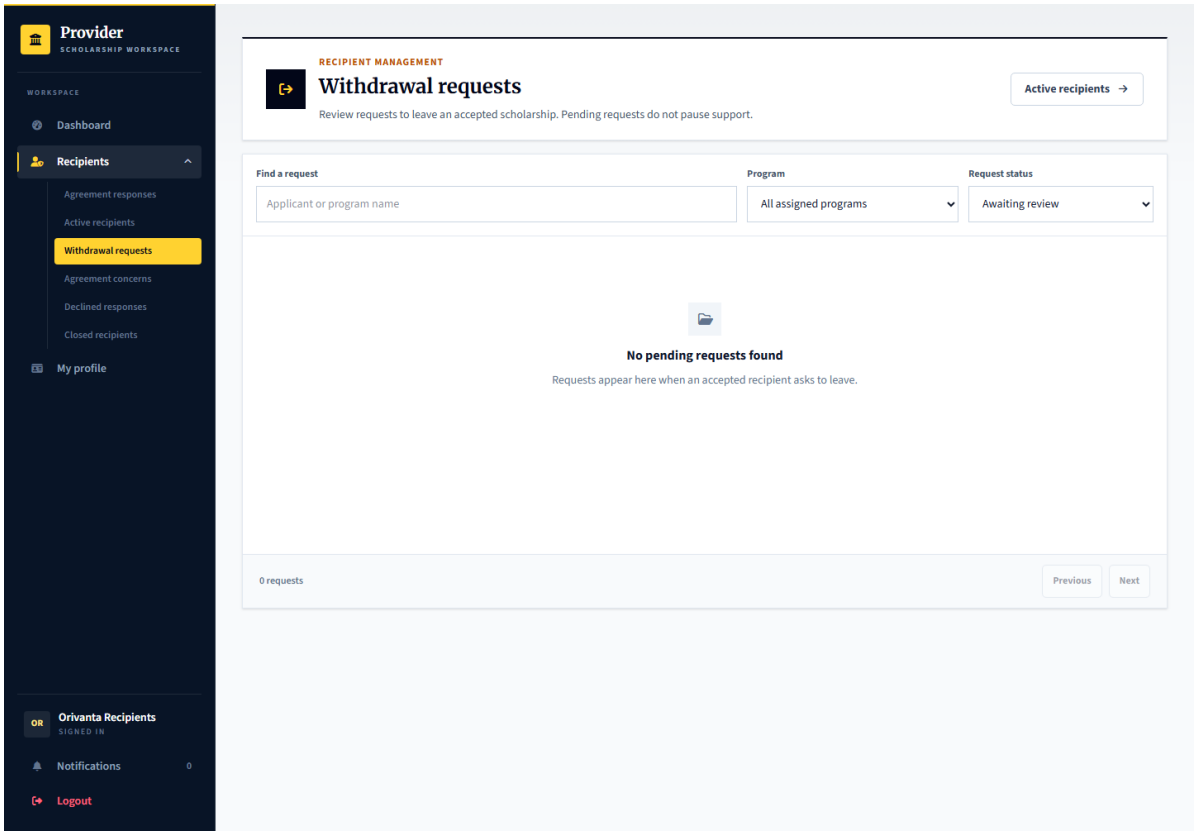

Expected result and handoff: The one-time award ends through an explicit support completion decision. Selection, release scheduling and provider proof alone do not finish the award.

27 Recipient withdrawal requests

Signed in account: orivanta.recipients

Page shown: Recipient withdrawals

An accepted recipient can request withdrawal with an explanation. Support does not end while the request is pending. A missed pickup or silence is not a withdrawal request. This process is separate from withdrawing an application before accepting an award.

Current hosted view | orivanta.recipients | recipient withdrawals

Applicant: learner.brio submits or cancels an eligible request. Provider: orivanta.recipients reviews it in Withdrawal requests. Approval ends future support without erasing past benefits or acceptance history. The applicant overview identifies the approved withdrawal and links to the original request.

Submit and review a voluntary withdrawal request

Signed in account: learner.brio then orivanta.recipients

Use the existing accepted Applicant Brio award if you choose this optional branch. A withdrawn award is not needed for the successful main demonstration.

1. As the applicant, open Scholarship Support and the withdrawal option. Explain why future support should end, inspect the confirmation and submit the request.

2. While the request is pending, inspect its status and any permitted cancellation control. A pending request does not end the scholarship.

3. As the Recipient Officer, open Withdrawal requests and select the actual request. Read the applicant statement, prior benefits and effective-date consequences.

4. Record the intended reviewed outcome through its controls and confirmation. An approved withdrawal ends future support without erasing prior delivery or acceptance history.

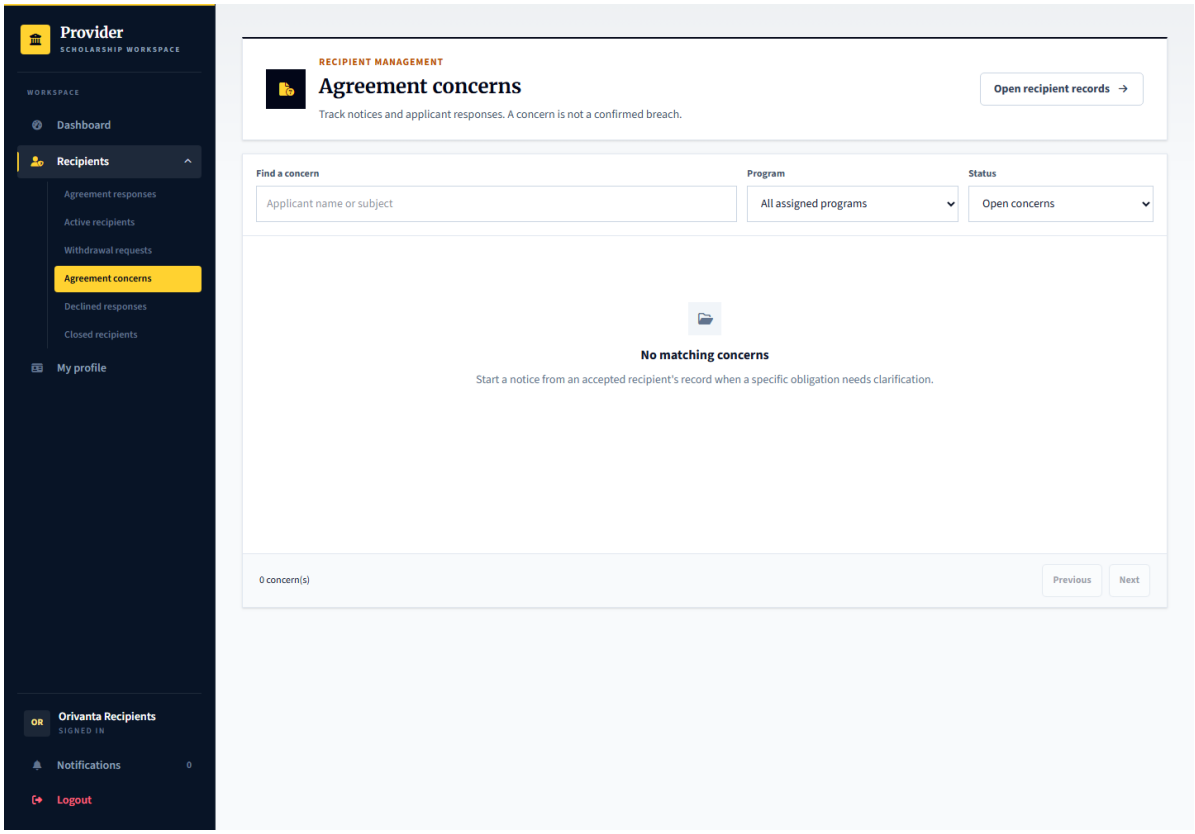

Expected result and handoff: The applicant sees the reviewed withdrawal outcome. A missed appointment or silence is never recorded as voluntary withdrawal without the request.

28 Agreement concerns before conclusions

Signed in account: orivanta.recipients

Page shown: Recipient concerns

Agreement concerns begin as private drafts with a specific accepted obligation, factual explanation and proof. Sending the notice gives the applicant an opportunity to respond; a notice is not a confirmed breach. The live queue starts empty until a tester creates a case.

Current hosted view | orivanta.recipients | recipient concerns

Applicant: learner.brio can respond to a concern created for Applicant Brio. Provider: orivanta.recipients prepares and issues notices. Admin: lumenops.reviews receives cases only when independently escalated. No cases were seeded merely to fill this page.

Issue a concern and receive the applicant explanation

Signed in account: orivanta.recipients then learner.brio

This optional branch creates the facts and notice through the real workflow. No adverse conclusion is preloaded merely to populate a queue.

1. Open Applicant Brio, Agreement concerns, then New concern. Select the actual accepted obligation, state the concern and save the private draft.

2. Add relevant fictional proof and review it. Give the required response opportunity and issue the notice only after the accuracy acknowledgment.

3. As the applicant, open the notice, compare the accepted term and proof, and submit the explanation, correction or circumstances with any supporting file.

4. As the provider, read the response before concluding anything. Resolve a clarified concern through its available control or request independent review with the preserved evidence when needed.

5. Do not treat silence as proof. Before a response, the response opportunity must expire where required. A concern does not add an external blacklist or automatic selection penalty.

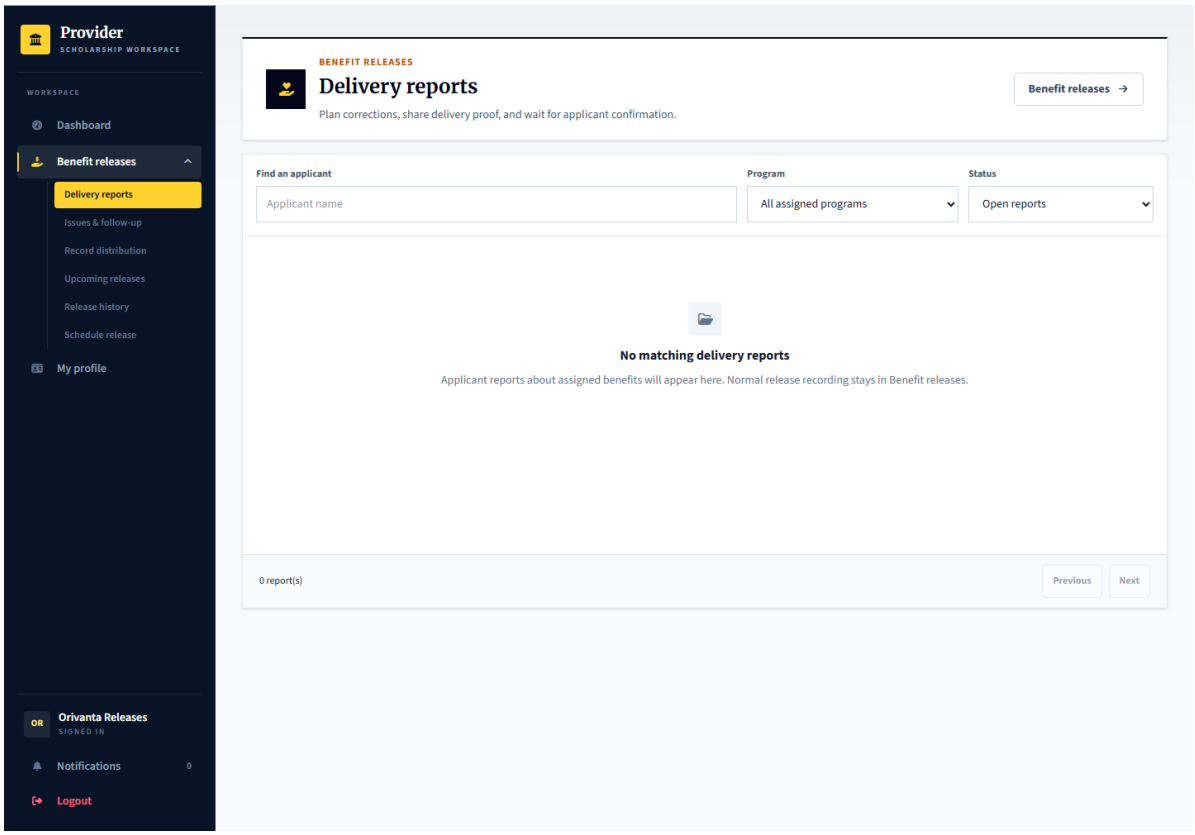

Expected result and handoff: The record preserves the notice, proof, applicant response and any review request. Support termination is a separate guarded decision.

29 Provider delivery investigation and correction

Signed in account: orivanta.releases

Page shown: Provider delivery reports

The release officer responds to missing-benefit reports, requests information or proposes a documented delivery correction. The report stays unresolved until the applicant confirms receipt or gives the appropriate response.

Current hosted view | orivanta.releases | provider delivery reports

Applicant: learner.aurora can report an issue from its benefit page. Provider: orivanta.releases investigates and supplies proof. Admin: may recommend follow-up on an escalated delivery review but cannot penalize the applicant for reporting a missing benefit.

Investigate a reported missing benefit

Signed in account: learner.aurora then orivanta.releases

Use Applicant Aurora to create this optional report rather than preselecting an adverse finding. Keep the normal receipt and missing-benefit branches separate.

1. As the applicant, open Benefit releases and Report a benefit issue. Select the agreed benefit or relevant release; explain missing, partial or unclear delivery and submit the report.

2. As the Release Officer, open Delivery reports and the specific report. Read its source, applicant explanation, distribution and any proof.

3. Ask for information or propose a correction through the report controls. An actual delivery proposal needs the linked distribution, date and supporting proof.

4. As the applicant, review the correction and confirm actual receipt or explain why the issue remains unresolved. Provider proof alone cannot resolve this step as received.

5. If needed, request independent review through the permitted case controls. An admin recommendation still does not confirm benefit receipt for the applicant.

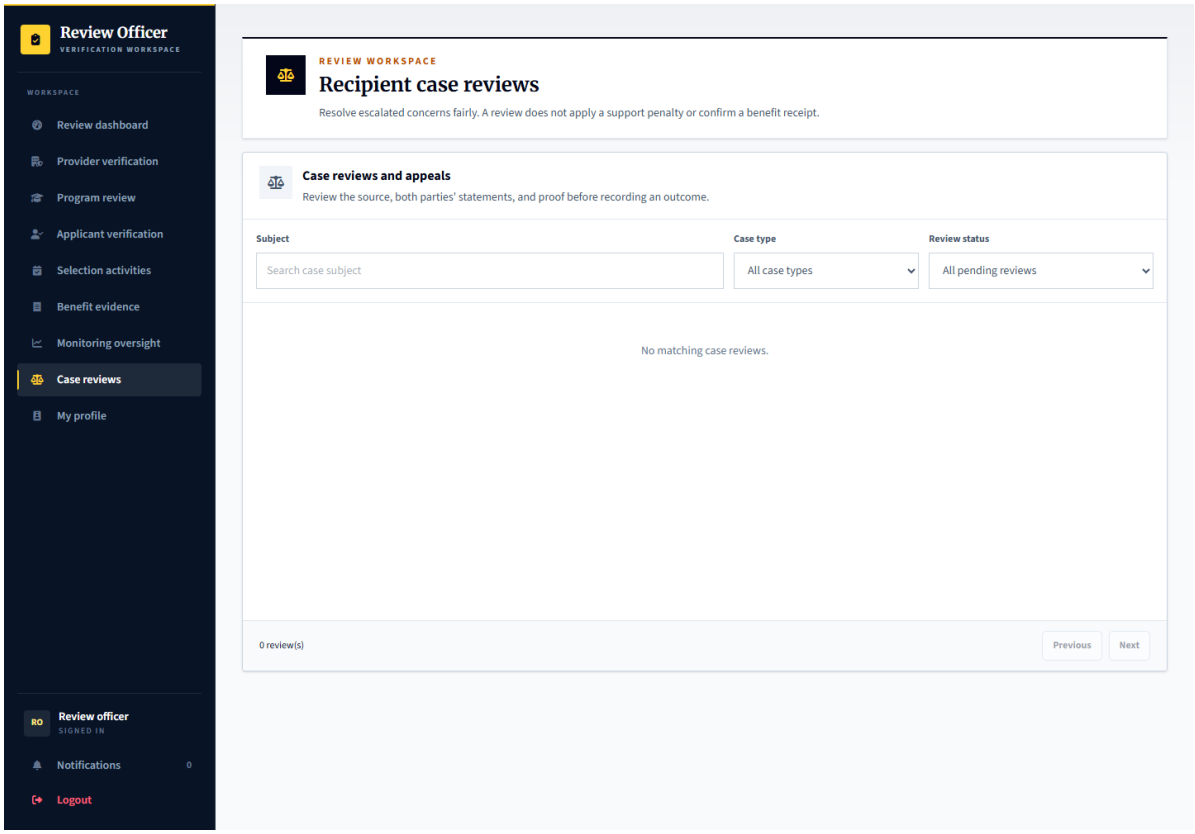

Expected result and handoff: Resolution follows the recipient response and the report workflow. A report does not penalize the applicant or create a duplicate one-time benefit.

30 Independent review appeals and privacy

Signed in account: lumenops.reviews

Page shown: Admin case review

The admin reviewer examines the accepted obligation or benefit, evidence, statements and response opportunity, then records a reasoned outcome. A different authorized reviewer must decide an appeal of the first reviewers outcome. Privacy and access details are collapsed inside an opened case.

Current hosted view | lumenops.reviews | admin case review

Applicant: may submit information and appeal. Provider: may request independent review but cannot decide its own appeal. Admin: lumenops.reviews handles the initial case and lumenops.manager can provide a different authorized reviewer. Cross-provider sharing stays disabled; no blacklist or automatic rejection is created.

Inspect and decide an escalated case

Signed in account: lumenops.reviews

The fresh dataset has no escalated or appeal case. Create and escalate a fictional case through the preceding workflow to demonstrate these actions.

1. Select a case from Case reviews after a party requests independent review.

2. Compare the accepted source, original proof and statements; request more information if the record is incomplete.

3. Choose a finding and recommendation explicitly, cite the proof considered and explain the reasons.

4. Complete the source and response acknowledgements before Record outcome. This does not automatically end support or confirm receipt.

Record an internal privacy assessment

Signed in account: lumenops.reviews

The fresh dataset has no escalated or appeal case. Create and escalate a fictional case through the preceding workflow to demonstrate these actions.

1. Expand Privacy and access inside the opened case, then choose Record internal assessment.

2. Document the purpose, reasons, recheck date and any justified retention hold.

3. A case change or appeal supersedes an earlier assessment; it does not automatically release a retention hold.

4. Saving this assessment does not enable sharing with another provider or create a blacklist.

Respect independent appeal review

Signed in account: lumenops.reviews

The fresh dataset has no escalated or appeal case. Create and escalate a fictional case through the preceding workflow to demonstrate these actions.

1. An applicant can appeal the recorded review outcome through its case dialog.

2. The officer who made the original outcome cannot decide that appeal.

3. A different authorized admin reviews the preserved evidence and appeal explanation.

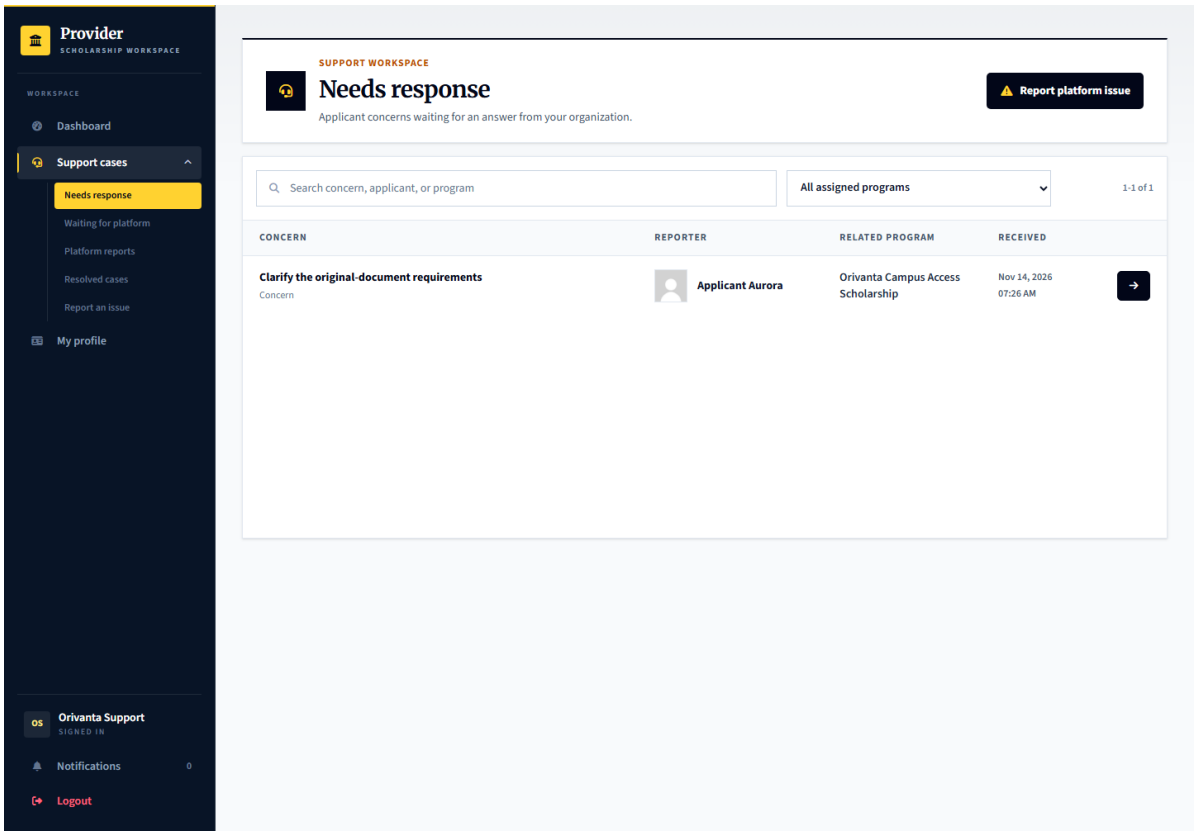

4. The original review and any separate support decision remain part of history; an appeal is not an automatic reversal.

31 Provider support and platform reports

Signed in account: orivanta.support

Page shown: Provider support

Provider support staff handle questions and track replies within their organization. Platform problems and privacy requests can be escalated through the platform support process rather than changing an applicant decision informally.

Current hosted view | orivanta.support | provider support

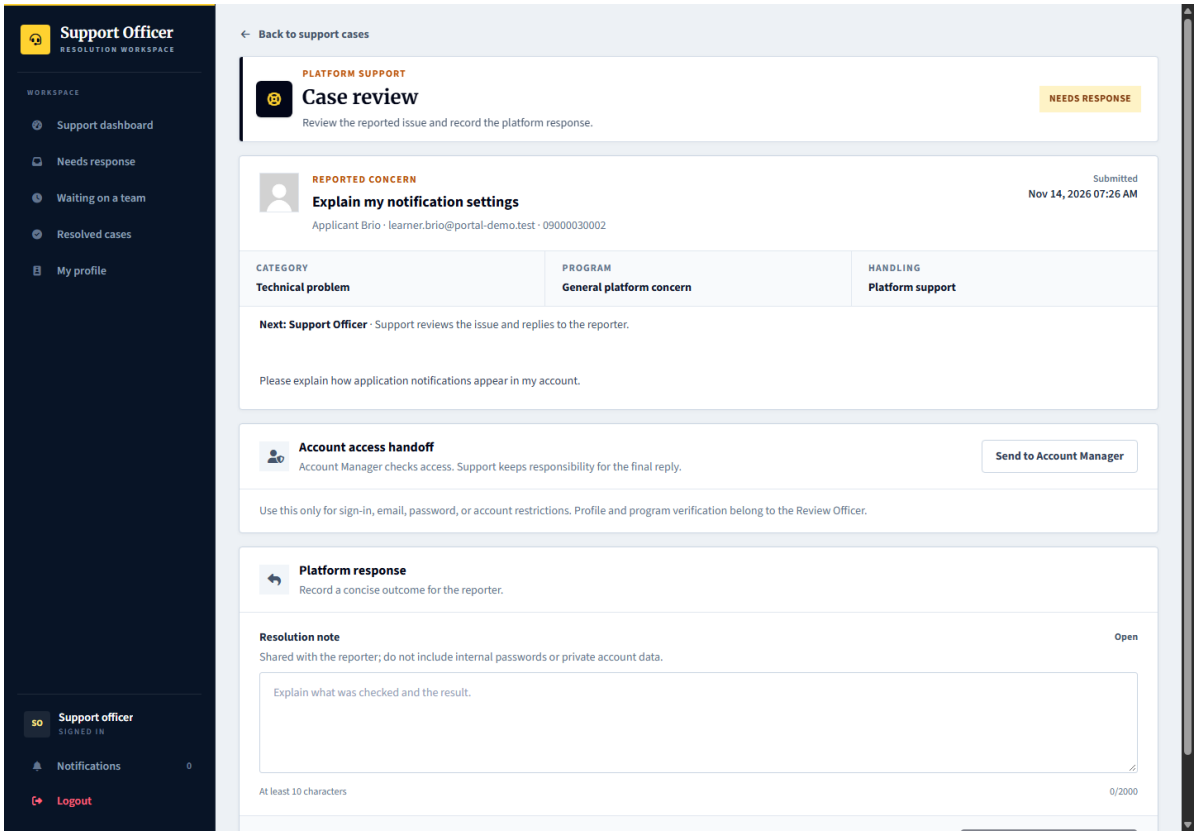

Applicant: uses its permitted help or problem-report entry points. Provider: orivanta.support handles its inbox and platform escalations. Admin: lumenops.support handles platform-level support and privacy follow-up.

32 Admin support case handling

Signed in account: lumenops.support

Page shown: Admin support

The Support Officer owns the final platform reply. For a sign-in, password, email or account restriction issue, it can send a limited access task to the Account Manager. The original report and attachments stay with Support. A reply is not profile verification or a scholarship decision.

Current hosted view | lumenops.support | admin support

Applicant and provider: supply the relevant facts and respond to requests. Admin: lumenops.support routes and resolves platform issues using the support workspace.

Open a platform support case and respond

Signed in account: lumenops.support

1. Open a case from Needs response and confirm the reporter, related program or page, original report and attachments.

2. The existing platform case Explain my notification settings belongs to learner.brio. Read its actual scope and reply as appropriate. No account-access referral has been seeded. If a genuine access task is needed for a demonstration, create that specific support request first, then use Send to Account Manager with a limited instruction.

3. While the task is pending, the case moves to Waiting. Support may prepare a reply but cannot complete it until the task returns or is cancelled with a reason.

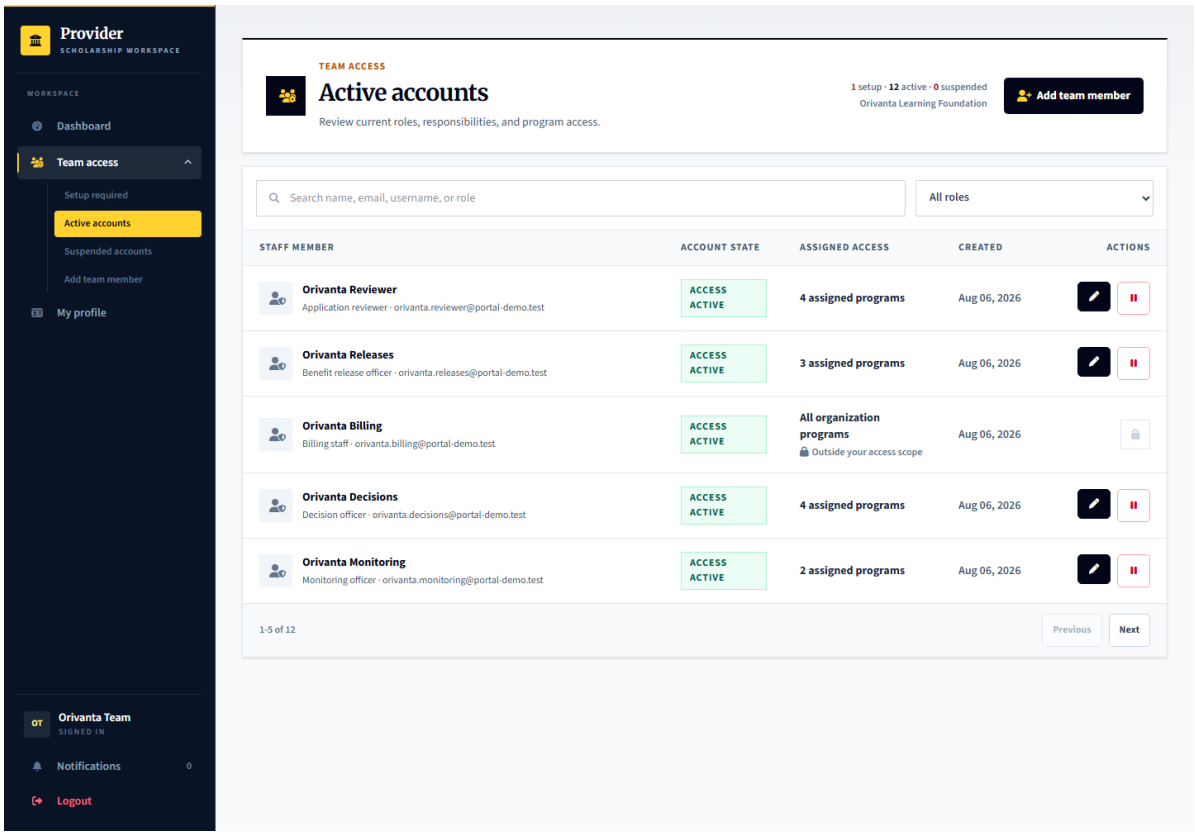

4. After Account Manager actually returns a newly created task, reopen the same support case, read the returned result and confirm the reporter-facing reply. The reset does not contain a separate pre-returned task. Returning an internal result does not itself send the final support response.

33 Provider staff and program assignment

Signed in account: orivanta.team

Page shown: Provider team

The team administrator manages staff access, role responsibilities and assigned scholarships. Limited program assignment prevents a staff member from automatically working on every program. Newly invited staff complete their first-login setup.

Current hosted view | orivanta.team | provider team

Applicant: has no staff-management access. Provider: orivanta.team manages access; orivanta.newstaff demonstrates first-login setup. Admin: lumenops.accounts manages platform account controls separately.

Give provider staff the intended program scope

Signed in account: orivanta.team

Use team administration for staff access, not to impersonate another specialist. Scope controls apply even when an action page is opened directly.

1. Open the team directory and the intended staff account. Confirm its identity, role and current program assignments.

2. Choose the role responsibilities and assigned scholarships appropriate to that person. Assign selected programs rather than all unless the job actually needs broader access.

3. Review and confirm the change. Check the staff member own workspace using that login; excluded program records should not be accessible.

4. Use orivanta.newstaff to demonstrate first-login password setup without changing an established staff password. A team role is not organization verification or platform admin access.

34 Admin account management

Signed in account: lumenops.accounts

Page shown: Admin account

The Account Manager handles access and setup, not evidence or organization verification. Support referrals appear first in its attention queue. The account record shows only the sanitized task and its result, not the private source report or attachments.

Applicant and provider: use their own profile and account settings. Admin: lumenops.accounts handles account controls, while lumenops.reviews performs verification and superadmin handles governance.

Inspect and manage the selected account

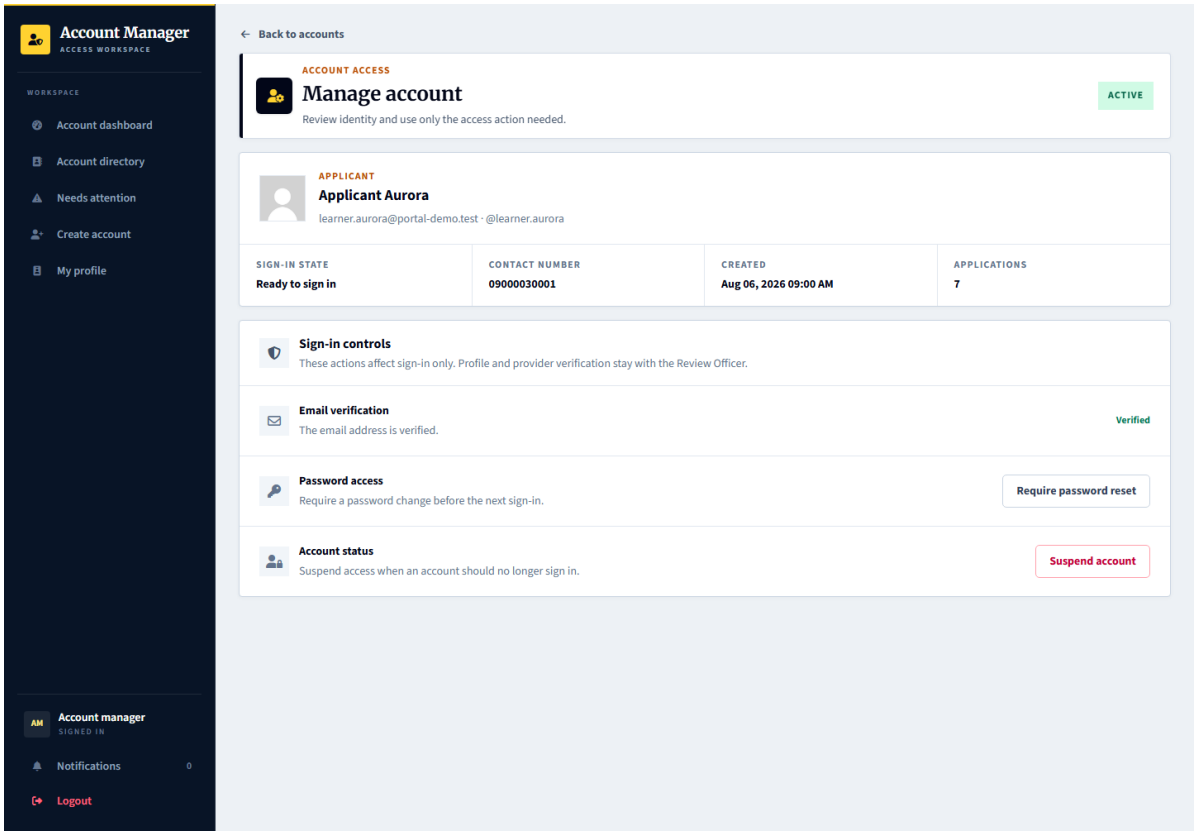

Signed in account: lumenops.accounts

1. Open the account directory and select Applicant Aurora, learner.aurora, to inspect the current account controls. There is no pre-created support referral in this dataset. To demonstrate Return result, first create a justified access request and send it from lumenops.support, then open that task here.

2. Read the task, then inspect the relevant sign-in, verification-email, password or restriction controls. Use a separate access action only when it is actually required.

3. Select Return result, explain the checked account controls and any account-holder step, then confirm. The task returns to Support. No password reset, suspension or verification change is required merely to demonstrate this task.

4. Returning a result does not automatically change account access, verify the profile or close the support case. Support reviews the result and sends the final reply. A stale or already completed task cannot be saved twice.

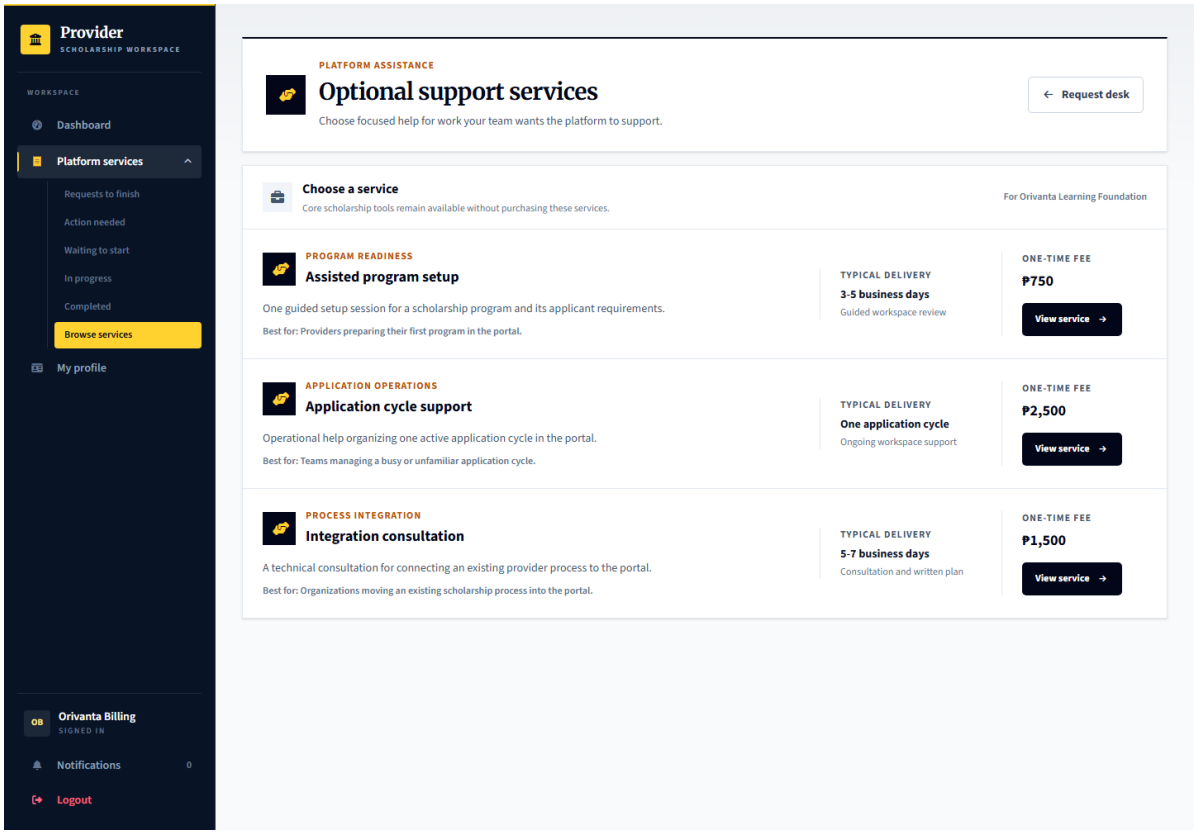

Current hosted view | lumenops.accounts | admin account

35 Provider paid services and requests

Signed in account: orivanta.billing

Page shown: Provider billing

The provider billing role reviews available platform services, submits intake information, follows checkout and tracks delivery, files, meetings and acceptance. These are provider-to-platform services, not scholarship payments to applicants.

Current hosted view | orivanta.billing | provider billing

Applicant: is not the purchaser in this workflow. Provider: orivanta.billing follows request, payment and delivery steps. Admin: lumenops.billing processes service delivery; lumenops.finance reviews financial records. Existing paid demo records are simulated.

Review service work and delivered files

Signed in account: orivanta.billing

1. Open a service request from your provider billing workspace.

2. Review intake, updates, delivered files and meeting information for the actual purchased service.

3. Use the appropriate response or acceptance controls after checking the delivered work, rather than treating checkout as completed service.

4. These services are purchased by the provider from the platform. They are separate from scholarship benefits received by applicants.

Follow a purchased service through delivery and acceptance

Signed in account: orivanta.billing then lumenops.billing

Use existing Application cycle support records for payment, assignment, delivery and confirmation. They are separate starting states, not proof of a live PayMongo transaction.

1. As provider Billing, choose an appropriate service and submit the required intake and desired outcome. Review its scope, price and terms before checkout. A payment awaiting confirmation must not be treated as paid.

2. As admin Billing, review the submitted intake. Request specific missing information or assign the paid ready service to its responsible officer and record the work plan.

3. In the service record, use Delivery, Files, Meeting and Updates to record actual work. Upload the deliverable, arrange any required meeting and give the provider clear review instructions.

4. Move completed work to provider review only when its required items are ready. As provider Billing, inspect the delivered file and reply with acceptance or a specific revision request.

5. As admin Billing, close out only after the appropriate provider acceptance and delivery checks. Payment confirmation, service acceptance, financial review and external refund remain different states.

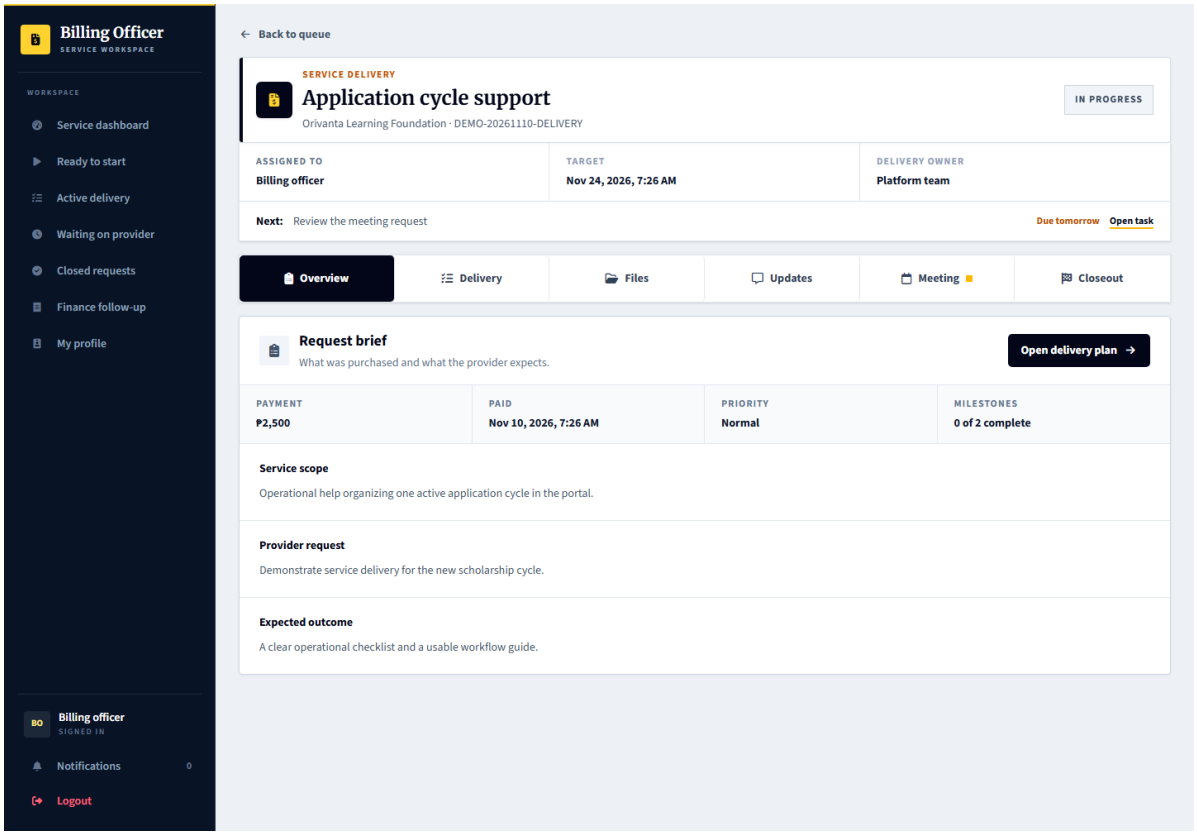

Expected result and handoff: The service has a recorded delivery and acceptance history. No scholarship applicant receives this service payment.

36 Admin service intake delivery and closeout

Signed in account: lumenops.billing

Page shown: Admin billing

The Billing Officer handles intake, assignment, service delivery, files, meetings and closeout. Its Finance follow-up queue also contains internal payment-record questions, including questions about already closed services. Delivery, payment and refund states remain separate.

Current hosted view | lumenops.billing | admin billing

Provider: orivanta.billing supplies intake information and reviews delivered work. Admin: lumenops.billing manages operational delivery. Applicant: no direct role in purchasing these provider services.

Work inside a service request

Signed in account: lumenops.billing

1. Open the existing paid Application cycle support service whose delivery is In progress. It belongs to Orivanta. The service is ready for operational work, not a pre-created Finance follow-up; a Finance question must be sent through its actual workflow before Respond to Finance is available.

2. Inspect the delivery, files, meeting and updates sections. For a Finance question, compare the source payment, cancellation and refund records before responding.

3. Record the actual service work through its controls. For a Finance question, use Respond to Finance and save a concise internal finding; this returns the question to the Finance Officer.

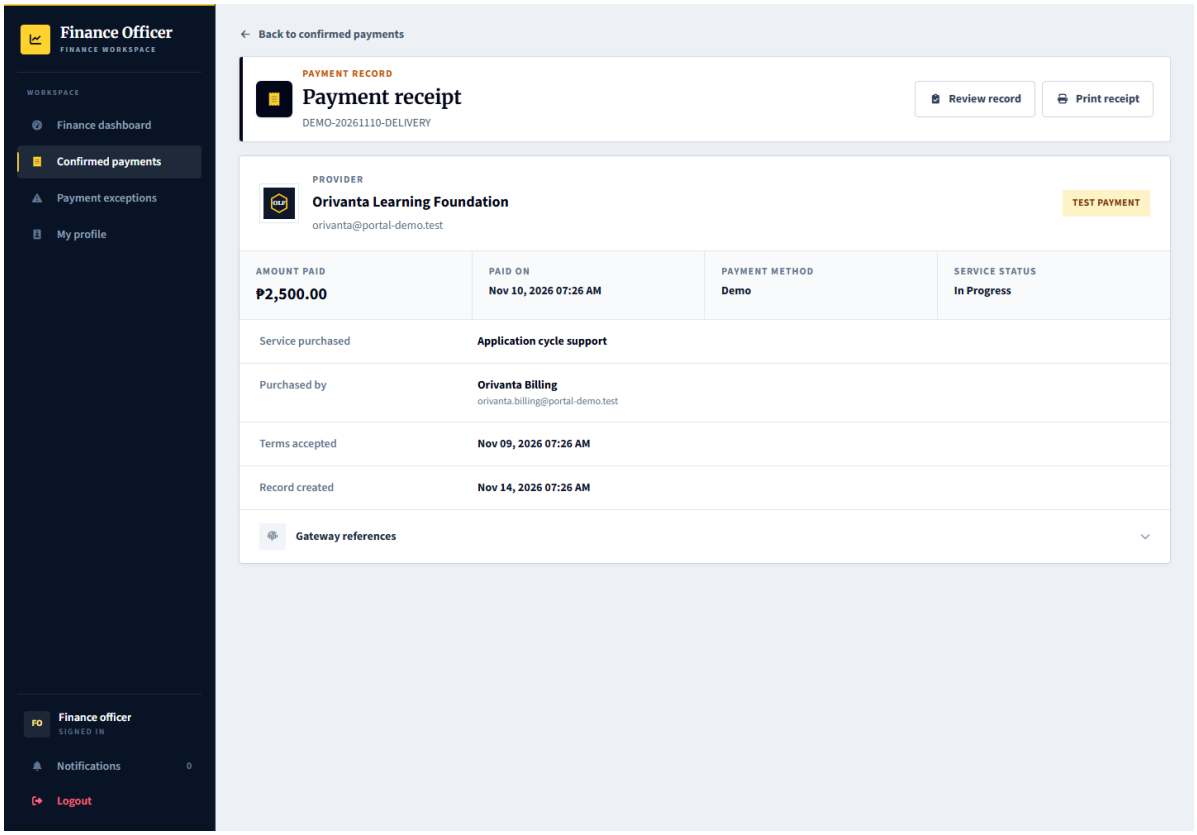

4. A Billing response does not issue a refund or change payment status. Complete service delivery only after the separate workflow and provider acceptance requirements are satisfied.

37 Admin finance and payment records

Signed in account: lumenops.finance

Page shown: Admin finance

The Finance Officer reviews confirmed payments, receipts and exceptions. An internal financial check can be sent to Billing and returned to Finance without changing the underlying transaction. Gateway confirmation, delivery completion and external refunds have their own states.

Current hosted view | lumenops.finance | admin finance

Provider: uses its billing workspace and payment or receipt links. Admin: lumenops.finance handles finance review; lumenops.billing handles the service work. Applicant scholarship benefits remain a separate workflow.

Inspect a payment or receipt record

Signed in account: lumenops.finance

1. Open the paid Application cycle support payment or receipt for Orivanta, such as the service currently in progress. There is no pre-returned Billing clarification in this reset. Inspect its real payment and delivery fields before deciding whether an internal review question is needed.

2. If clarification is needed for a paid service, select Request a Billing record check, explain the question, then confirm Send to Billing. Finance waits for the response.

3. Read the request and Billing response, compare source records, then select Record a financial check. Enter the finding and confirm Record check. An outdated form requires reloading the latest record.

4. Check history retains the question, response and resolution. A pending refund or missing payment confirmation remains an exception even after this internal check. Recording a check does not transfer money, issue a refund or create a receipt for an unconfirmed payment.

Demonstrate the two admin handoffs from end to end

Signed in account: lumenops.finance

The new dataset has ordinary support and service records, but it does not pre-create the internal Support-to-Account-Manager or Finance-to-Billing exchanges. Demonstrate those handoffs by creating the first legitimate request and returning to that same record. A question and its response must actually exist before the next handoff action is available.

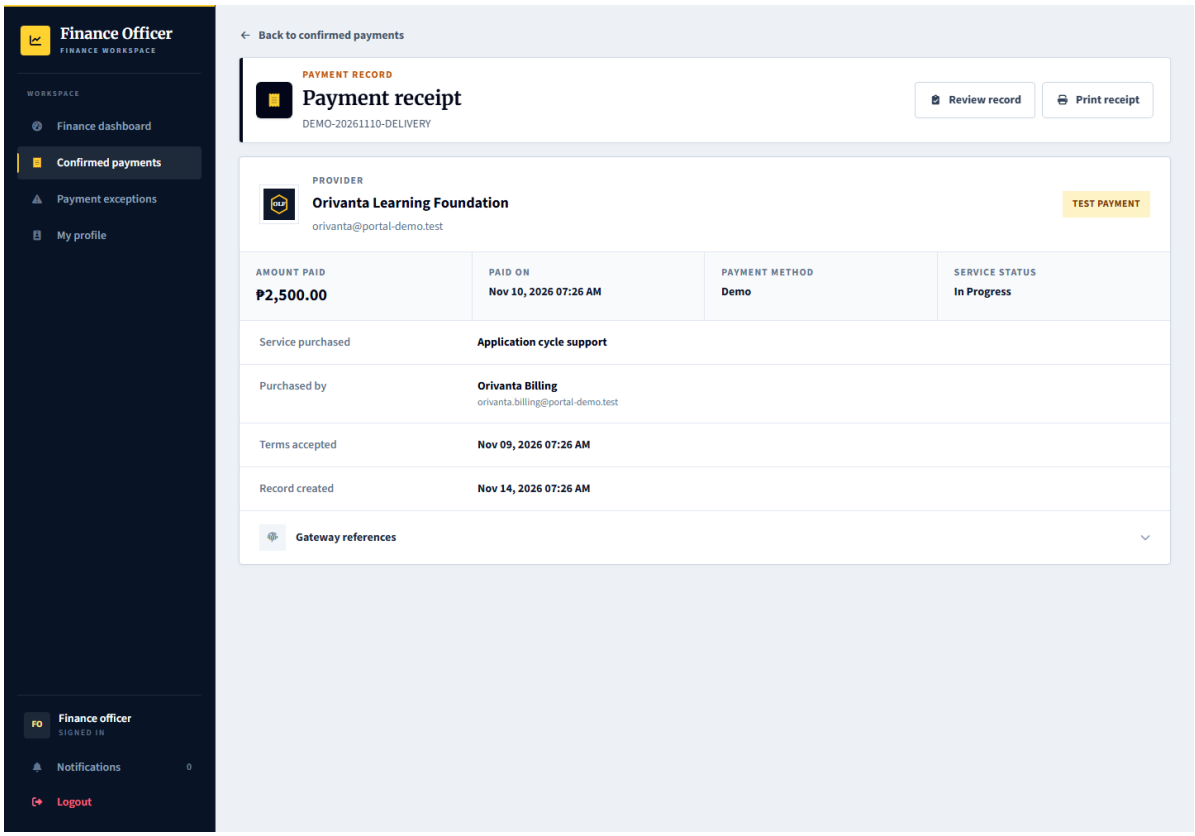

1. For an access handoff, use a suitable account-access support case, assign a limited task as lumenops.support, then open the task as lumenops.accounts. Inspect the controls and Return result without changing access unless an access action is actually necessary.

2. Return to that same case as lumenops.support. Read the Account Manager finding and record the reporter-facing response. There is no separate account or seeded returned case for this step.

3. For Finance clarification, open a current paid service as lumenops.finance, use Request a Billing record check and confirm the precise question. Switch to lumenops.billing and respond in the same service record.

4. Reopen the same service as lumenops.finance, inspect the Billing response, then record the financial check and its finding. The prepared payment remains separate from the operational delivery status.

5. Use lumenops.records to follow the related service or support history afterward. Neither internal task completion sends money, closes the service automatically, verifies a profile or changes scholarship support.

Current hosted view | lumenops.finance | admin finance

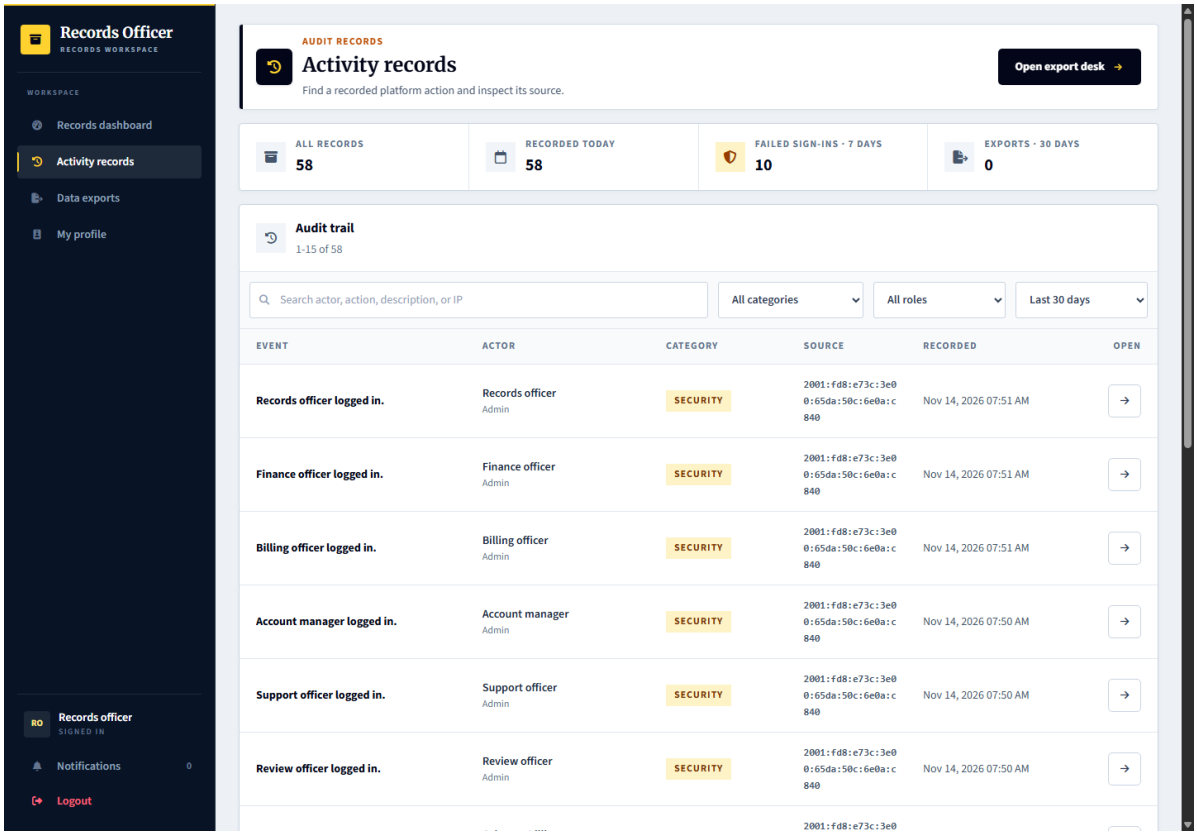

Expected result and handoff: Each specialist owns its next action. Manager oversight can inspect ownership but cannot submit these specialist decisions.

38 Admin audit history and exports

Signed in account: lumenops.records

Page shown: Admin records

The Records Officer can follow exact related account, application, program, service or support records from an audit entry. The saved entry describes the event at that time; later events can supersede its outcome. Private handoff instructions and financial notes are not copied into audit metadata.

Current hosted view | lumenops.records | admin records

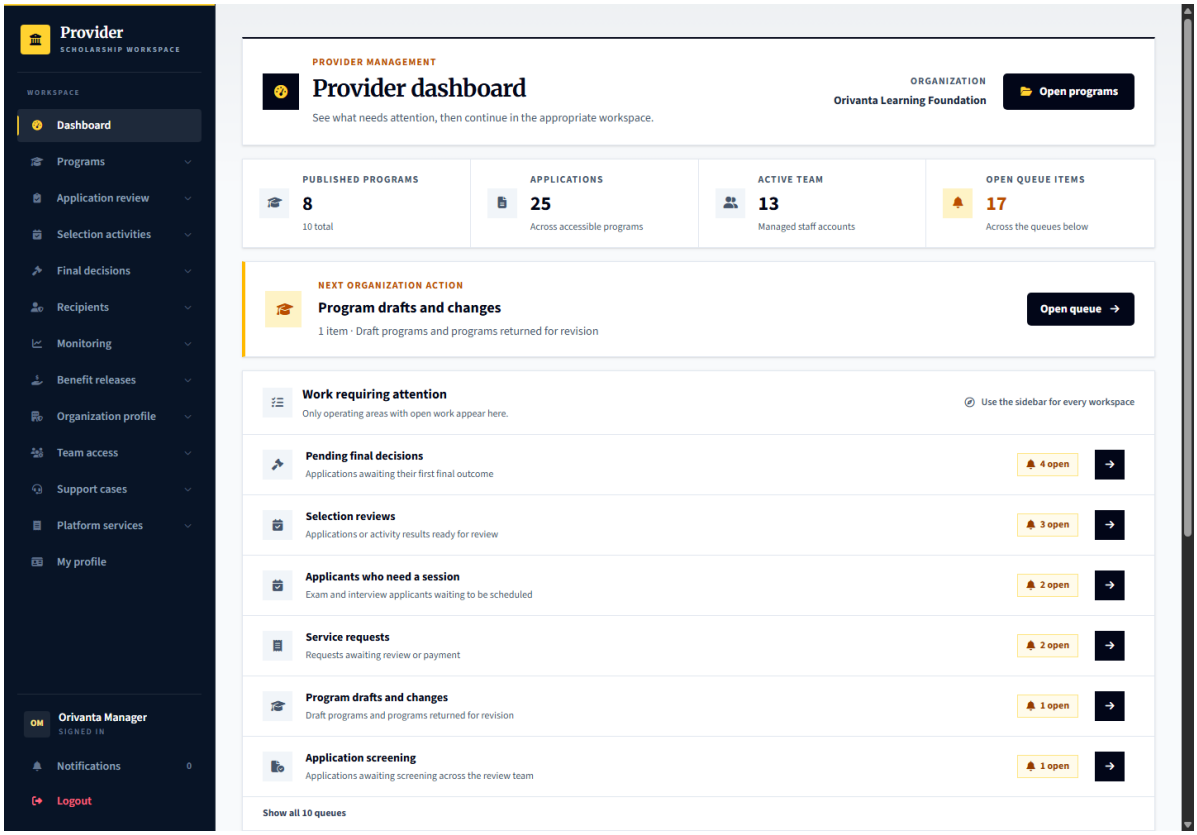

Open an activity entry, confirm its actor and recorded time, then select the relevant Related history link. The filtered list keeps the exact record context and return path. Exports require separate permission; Records cannot submit specialist decisions.

39 Provider manager overview and combined workspaces

Signed in account: orivanta.manager

Page shown: Provider manager

The provider manager has a cross-workspace overview for its organization rather than a separate new scholarship process. It can move between permitted programs, reviews, selection, decisions, recipients, monitoring and releases. Program assignment and organization boundaries still apply.

Current hosted view | orivanta.manager | provider manager

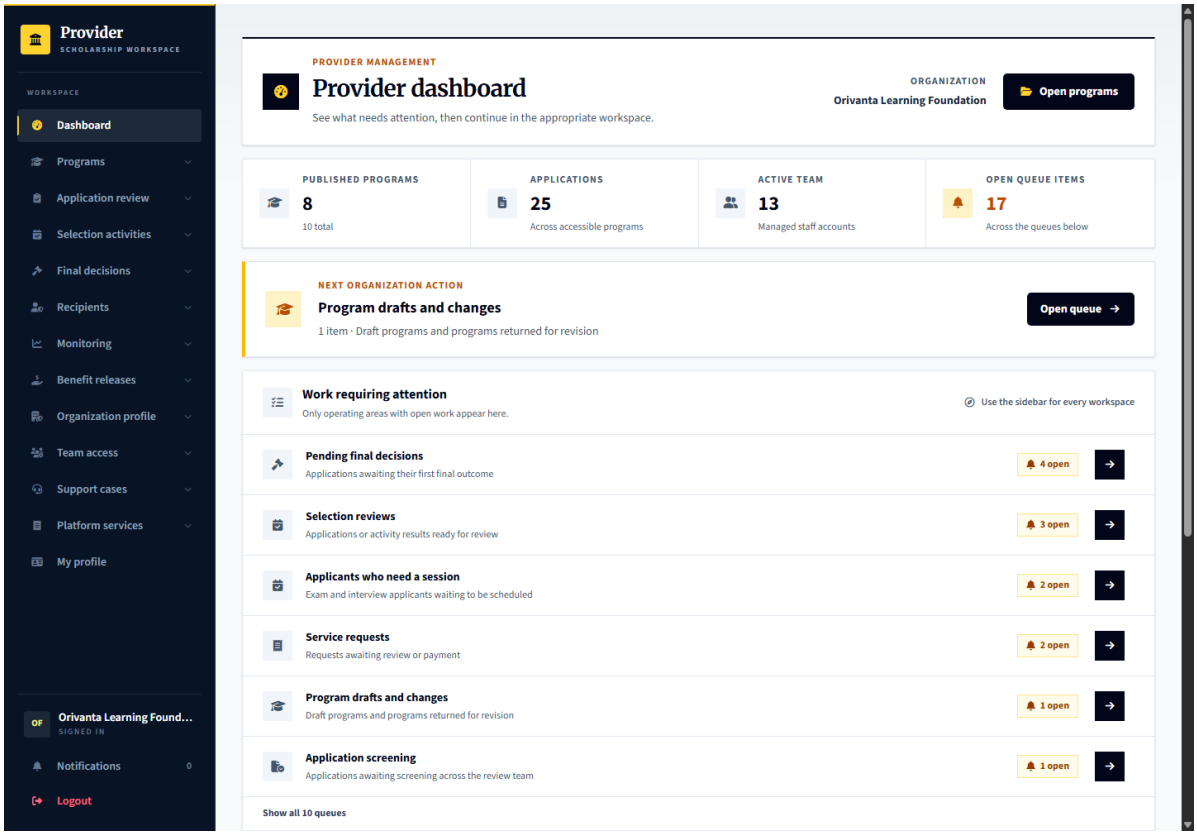

Comparison: operational staff see focused queues; the manager sees the broader organization picture. Having access to multiple workspaces does not remove evidence, notice, agreement, appeal or receipt-confirmation guards.

40 Organization representative view

Signed in account: orivanta

Page shown: Provider representative

The organization representative is the organization owner account. Its visible navigation and actions follow the current role model; do not assume it is interchangeable with every specialist or the provider manager. Use the named operational account for the process being demonstrated.

Current hosted view | orivanta | provider representative

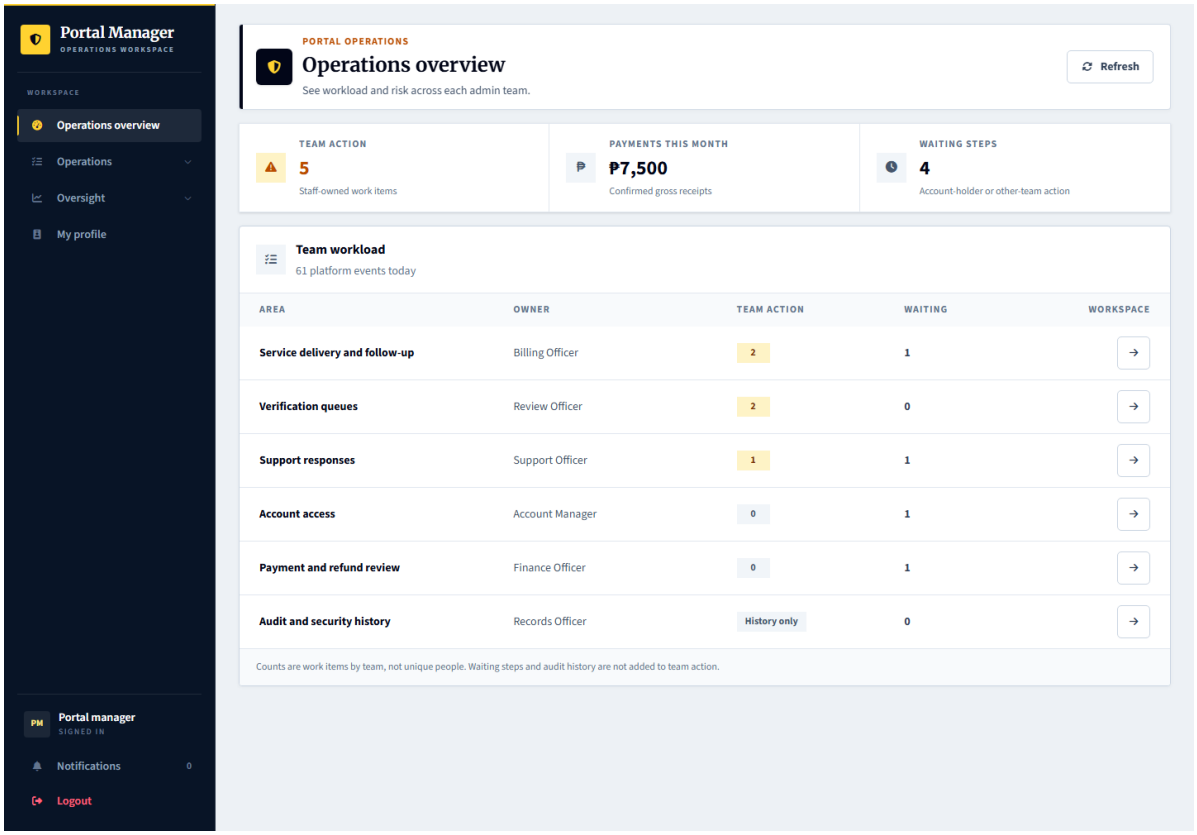

Comparison: the representative is shown here after the specialist workflows so organization ownership is not confused with the day-to-day duty of each role.

41 Portal manager overview

Signed in account: lumenops.manager

Page shown: Admin manager

The Portal Manager has read-only oversight across admin service areas. Team action counts show work currently owned by staff. Waiting steps show another team, the account holder or gateway; failed sign-in history is reference information, not automatically unresolved work. Totals count work items, not unique people.

Current hosted view | lumenops.manager | admin manager

Specialists keep their own actions and permissions. The manager sees current owners, waiting handoffs, payment exceptions and history without receiving private support attachments, internal notes or specialist decision controls.

Inspect work ownership from portal manager oversight

Signed in account: lumenops.manager

1. Open Operations and read Team action, Waiting steps and History only separately. Open the relevant service area rather than adding all visible counts together.

2. In Support, distinguish cases waiting for the Account Manager from cases needing a Support reply. In Billing and Finance, distinguish an internal follow-up from actual payment, refund or delivery status.

3. In Reviews, inspect the category totals and available summaries. Use lumenops.reviews for evidence and final verification actions; the manager overview cannot submit them.

4. Use the responsible specialist for the next action. Manager oversight does not grant decision authority or replace independent review.

42 Superadmin governance view

Signed in account: lumenops.root

Page shown: Superadmin

Superadmin governs admin-team access and platform oversight. Available staff are active, email verified, finished with password setup and hold the permissions required by their role. An active account alone does not provide usable role coverage.

Comparison: demonstrate superadmin last. Use lumenops.accounts, lumenops.reviews, lumenops.support, lumenops.billing, lumenops.finance and lumenops.records for the corresponding operational process.

Open an admin team account in governance

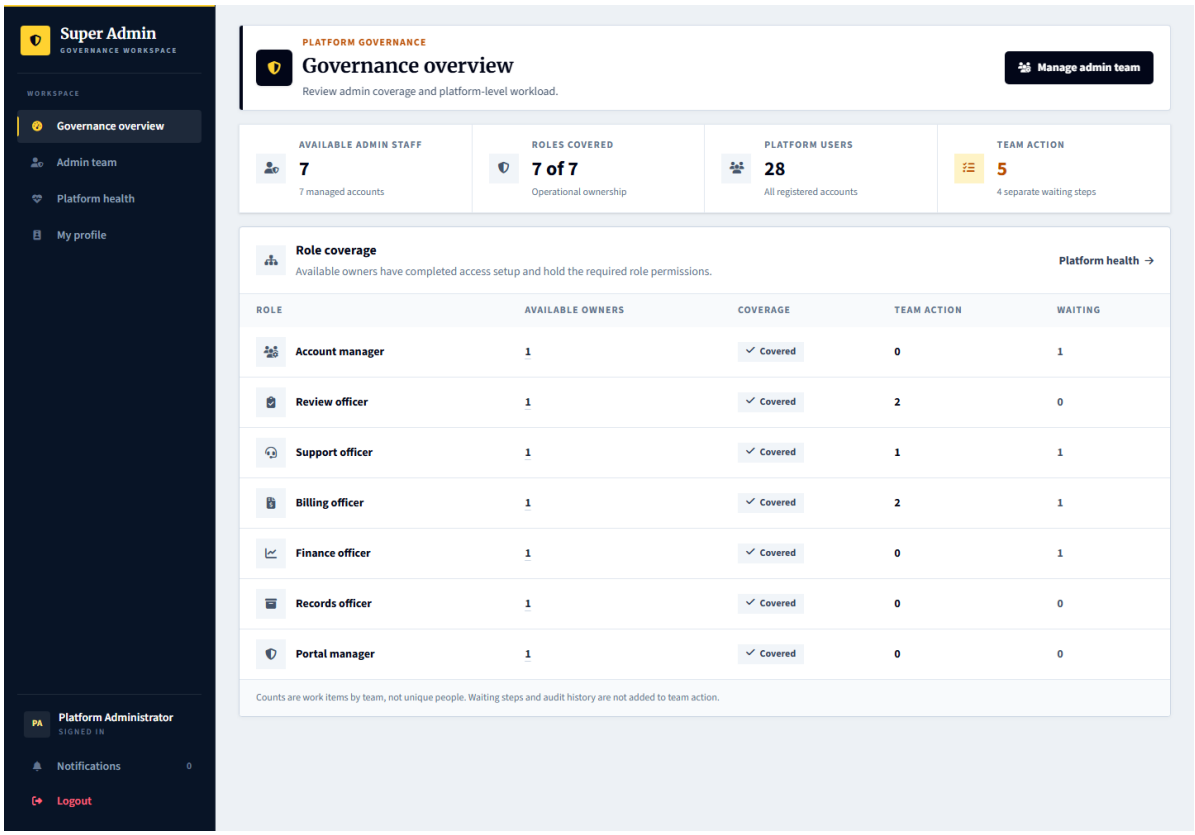

Signed in account: lumenops.root

1. Review role coverage and any area with open work but no available owner. Select its role-coverage link to open the filtered admin team list.

2. Inspect the staff member and readiness label, such as email verification needed, password reset required, missing role permissions or access suspended.

3. Make only the intended governance change after its confirmation. Restoring readiness does not complete the operational work or grant unrelated permissions.

4. Return to the specialist queue with its assigned account. Demonstrate manager oversight and superadmin governance last, after the actual operational handoffs.

Current hosted view | lumenops.root | superadmin

Demonstration boundaries

Only hosting contains this new one-provider dataset. The local database still holds its earlier accounts and records; do not expect these hosted usernames to exist locally. Verified private rollback backups retain the previous hosted database. Current decisions and responses remain tester actions except for the successful prerequisites identified here. Shared passwords and sample evidence are not for a real launch.

A term-related early support termination requires its separate guarded decision and the appeal opportunity. Do not backdate records or change the clock to bypass it. Independent review and delivery receipt are separate actions. Cross-provider disclosure remains disabled.

No failed, rejected, terminated, official waitlisted, missed or unclaimed applicant outcome is pre-recorded. Current concern, withdrawal, appeal, account-referral and Finance-follow-up branches must be created by the tester through their real prerequisites. The one provider is already approved; there is no second pending provider.

Demonstration completion checklist

- Applicant verification is separate from scholarship screening and publication. Show the document review action before the overall verification result.
- A published session has a real roster, attendance, proof and individual result. A DSS suggestion remains advisory until the decision officer confirms the outcome.
- Selected recipients review their saved terms before support begins. A monitoring plan, appointment, document result and case closure are separate records.
- Benefit delivery needs provider evidence and the recipient response. One-time awards can complete without a recurring grade plan; unsettled promised benefits still block normal completion.
- Support, Account Manager, Billing and Finance each return their own handoff. An internal reply does not silently perform another team decision.
- Finish with manager ownership views and superadmin role coverage. Preserve the tester decisions and use a fresh prepared starting point when demonstrating another branch.
